Real SK0-005 Exam - SK0-005 New Exam Braindumps

We have seen that candidates who study with outdated SK0-005 practice material don't get success and lose their resources. To save you from loss of money and time, BrainDumpsStore is offering a product that is specially designed to help you pass the CompTIA Server+ Certification Exam (SK0-005) exam on the first try. The CompTIA SK0-005 Exam Dumps is easy to use and very easy to understand, ensuring that it is student-oriented. You can choose from 3 different formats available according to your needs. The 3 formats are desktop SK0-005 practice test software, web-based SK0-005 practice exam, and SK0-005 dumps PDF format.

CompTIA Server+ certification is a valuable credential for IT professionals who work with servers. CompTIA Server+ Certification Exam certification validates a candidate's knowledge and skills in server technologies, including installation, configuration, maintenance, troubleshooting, and security. The SK0-005 exam is designed to test a candidate's understanding of server technologies in real-world scenarios and is recognized by many employers in the IT industry.

The CompTIA Server+ Certification Exam certification exam comprises of 90 multiple-choice questions that must be completed within 90 minutes. SK0-005 Exam is computer-based, and candidates are required to score at least 750 out of 900 to pass the exam. SK0-005 exam can be taken at any Pearson VUE testing center worldwide. The cost of the exam varies depending on the country and region.

CompTIA Server+ Certification Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

A server administrator is racking new servers in a cabinet with multiple connections from the servers to power supplies and the network. Which of the following should the administrator recommend to the organization to best address this situation?

- A. Blade enclosure
- B. Rack balancing
- C. Rail kits
- D. Cable management

Answer: D

Explanation:
Explanation
Cable management is the process of organizing, securing, and labeling cables in a server rack or cabinet. Cable management can help improve airflow and cooling, reduce clutter and confusion, prevent damage and interference, and enhance safety and aesthetics123. Cable management can be achieved by using various tools and accessories, such as cable trays, ties, hooks, clips, labels, ducts, and organizers12.

NEW QUESTION # 24

An administrator is investigating a physical server mat will not Boot into the OS. The server has three hard drives configured in a RAID 5 array. The server passes POST, out the OS does not load. The administrator verities the CPU and RAM are Doth seated correctly and checks the dual power supplies. The administrator then verifies all the BIOS settings are correct and connects a bootable USB drive in the server, and the OS loads correctly. Which of the following is causing the issue?

- A. The CPU has failed.
- B. The page file is too small.
- C. RAID 5 requires four drives
- D. There are multiple failed hard drives.
- E. There are mismatched RAM modules.

Answer: D

Explanation:
Explanation
If a server has three hard drives configured in a RAID 5 array, it means that the data is striped across all three drives with parity information. RAID 5 can tolerate one drive failure without losing data, but not two or more.
If there are multiple failed hard drives, the RAID 5 array will become corrupted and the OS will not load. The other options are not likely to cause the issue, as the server passes POST, the CPU and RAM are seated correctly, the BIOS settings are correct, and the OS loads from a bootable USB drive. RAID 5 does not require four drives, it can work with three or more. References: https://www.technewstoday.com/what-is-a-raid-5/

NEW QUESTION # 25

Joe. a user m the IT department cannot save changes to a sensitive file on a Linux server. An 1s -1& snows the following listing;

Which of the following commands would BEST enable the server technician to allow Joe to have access without granting excessive access to others?

- A. chmod 777 filename
- B. chown Joe filename
- C. chgrp IT filename
- D. Chmod g+w filename

Answer: D

Explanation:
Explanation
The chmod command is used to change the permissions of files and directories. The g+w option means to grant write permission to the group owner of the file. Since Joe is a member of the IT group, which is also the group owner of the file, this command will allow him to save changes to the file without affecting the permissions of other users. Verified References: [Linux chmod command]

NEW QUESTION # 26
Which of the following should a technician verify first before decommissioning and wiping a file server?

- A. Asset management documentation
- B. Document retention policy
- C. The media destruction method
- D. The recycling policy

Answer: A

Explanation:
Before decommissioning and wiping a file server, it's crucial to verify the asset management documentation.
This documentation provides detailed records of the server's lifecycle, including procurement, usage, maintenance, and decommissioning information. Ensuring that asset management documentation is up-to-date and accurate is essential before proceeding with the server's decommissioning to maintain proper inventory control, comply with regulatory and organizational policies, and facilitate any potential audits. While the media destruction method, recycling policy, and document retention policy are important considerations in the decommissioning process, verifying asset management documentation is the first step to ensure the server is correctly identified and accounted for in the organization's asset registry.

NEW QUESTION # 27
Which of the following techniques can be configured on a server for network redundancy?

- A. Clustering
- B. Vitalizing
- C. Cloning
- D. Teaming

Answer: D

Explanation:
Teaming is a technique that can be configured on a server for network redundancy. Teaming involves combining two or more network adapters into a single logical unit that acts as one network interface. This way, if one network adapter fails, another one can take over without disrupting network connectivity. Teaming can also improve network performance by load balancing traffic across multiple network adapters. Clustering is a technique that involves grouping two or more servers together to act as one system for high availability and fault tolerance. Virtualizing is a technique that involves creating multiple virtual machines on a single physical server to optimize resource utilization and flexibility. Cloning is a technique that involves creating an exact copy of a server's configuration and data for backup or migration purposes. References:
