### Palo Alto Networks XSOAR Engineer Sample Questions (Q89-Q94):

#### NEW QUESTION # 89

Which of these would be the most operationally efficient repository for moving XSOAR custom content from a development server to a production environment?

- A. Cortex XSOAR public content repository
- **B. Remote git repository specified in the dev-prod configuration parameters**
- C. A content repository specified in the Marketplace
- D. The development server's default repository

**Answer: B**

#### NEW QUESTION # 90

Where is a custom layout for an incident configured?.

- A. Incident playbook.
- **B. Incident type.**
- C. Integration instance settings.
- D. Pre-process rule.

**Answer: B**

Explanation:

The Admin Guide states that layouts—representing how analysts view incident data, evidence, fields, and work plans—are attached directly to incident types. When configuring an incident type, the administrator can specify the layout for the "New," "Editing," and "Preview" modes. This ensures consistent presentation of data across the SOC, tailored to each use case (e.g., phishing, endpoint alerts, malware investigations).

Pre-process rules (option A) operate before incident creation and do not control the user interface layout.

Incident playbooks (option B) automate response actions but have no effect on how the incident UI is presented. Integration instance settings (option C) define connection details and ingestion parameters but do not control UI layouts.

Only the Incident Type configuration page includes fields for selecting or assigning custom layouts. This aligns with XSOAR's design principle: incident types define schema, workflows, and UI behavior, including which layout is displayed to analysts.

Thus, the correct answer is D, as incident layouts are configured and bound within the Incident Type settings.

#### NEW QUESTION # 91

While testing a custom integration, an XSOAR engineer noticed that the incident fetch interval is missing. How can this be fixed?

- **A. Define the Incident Fetch Interval when running the integration's commands.**
- B. Duplicate the integration. Add the interval in the code. Save the integration and Configure the new integration instance with the interval required.
- C. Configure the application to send incidents on the required interval.
- D. Duplicate the integration. Edit the resulting copy and add `incidentFetchInterval` as a parameter. Save the integration. Configure the new integration instance with the interval required.

**Answer: A**

### NEW QUESTION # 93

An administrator has noticed that an incident fetch has failed, causing several internal workflows to be backed up. The administrator would like to receive notifications the next time the incident fetch fails.

How can they achieve this?

- A. Create a custom playbook that sends an email each time the fetch fails.
- B. Add a server config to notify when incident fetch fails.
- **C. Create a new integration that monitors the incident fetch and sends an email if the fetch fails.**
- D. Schedule a job that runs and monitors incidents in XSOAR that will send an email if there are no new incidents.

**Answer: C**
