ISACA Certified Information Security Manager Sample Questions (Q665-Q670):

NEW QUESTION # 665
Which of the following is MOST effective in protecting against the attack technique known as phishing?

- A. Up-to-date signature files
- B. Intrusion detection monitoring
- C. Firewall blocking rules
- D. Security awareness training

Answer: D

Explanation:
Explanation
Phishing relies on social engineering techniques. Providing good security awareness training will best reduce the likelihood of such an attack being successful. Firewall rules, signature files and intrusion detection system (IDS) monitoring will be largely unsuccessful at blocking this kind of attack.

NEW QUESTION # 666
The authorization to transfer the handling of an internal security incident
to a third-party support provider is PRIMARILY defined by the:

- A. information security manager.
- B. disaster recovery plan (DRP).
- C. escalation procedures
- D. chain of custody.

Answer: C

NEW QUESTION # 667
An organization is planning to engage a third-party service provider to develop custom software. Which of the following would help to provide the GREATEST assurance of software security?

- A. Review of the service provider's software development policies
- B. Security training for the service provider's software development staff
- C. Verification of certifications held by the individual developers
- D. Independent assessment against a relevant standard

Answer: D

Explanation:
An independent assessment against a relevant standard (B) provides the greatest assurance because it offers objective, third-party validation that security controls and development practices meet defined criteria. Examples include assessments against secure development standards or recognized control frameworks. Training (A), certifications (C), and policy reviews (D) are useful inputs, but they are indirect and do not confirm consistent, effective implementation. CISM emphasizes independent assurance for third-party risk management, especially when outsourcing high-risk activities such as custom software development. Independent assessments reduce reliance on self-attestation and help validate governance, SDLC controls, and security testing practices.

NEW QUESTION # 668
An organization has purchased an Internet sales company to extend the sales department. The information security manager's FIRS"F?ter defense? the security policy framework encompasses the new business model is to:

- A. perform a gap analysis.
- B. implement both companies' policies separately.
- C. perform a vulnerability assessment.
- D. merge both companies' policies.

Answer: A

NEW QUESTION # 669

The MOST basic requirement for an information security governance program is to:

- A. be based on a sound risk management approach.
- B. provide adequate regulatory compliance.
- C. provide best practices for security- initiatives.
- D. be aligned with the corporate business strategy.

Answer: D

Explanation:

To receive senior management support, an information security program should be aligned with the corporate business strategy. Risk management is a requirement of an information security program which should take into consideration the business strategy. Security governance is much broader than just regulatory compliance. Best practice is an operational concern and does not have a direct impact on a governance program.
