C_CPI_2506 Valid Exam Syllabus - C_CPI_2506 Practice Exam Fee

It is well known that even the best people fail sometimes, not to mention the ordinary people. In face of the C_CPI_2506 exam, everyone stands on the same starting line, and those who are not excellent enough must do more. Every year there are a large number of people who can't pass the C_CPI_2506 Exam smoothly. But we are professional in this career for over ten years. And our C_CPI_2506 study materials will help you pass the exam easily.

SAP Certified Associate - Integration Developer Sample Questions (Q39-Q44):

NEW QUESTION # 39
You want to access individual entities of an HTTP call over XPath. What must you do if no namespace mapping exists?

- A. Convert the namespaces to JSON.
- B. Remove the XML prolog.
- C. Remove the namespaces.
- D. Convert the namespaces to XML

Answer: C

Explanation:
If no namespace mapping exists, you must remove the namespaces to access individual entities of an HTTP call over XPath. Namespaces are prefixes that identify the source or context of an XML element or attribute. If the namespaces are not mapped to a URI, they can cause errors or conflicts when using XPath expressions. Therefore, you must remove the namespaces before applying XPath queries.

NEW QUESTION # 40
You want to send messages over an SOAP adapter to an integration flow. Which method do you use to send the messages?

- A. POST
- B. PATCH
- C. UPDATE
- D. GET

Answer: A

Explanation:
When sending messages to an integration flow via SOAP adapter:
The request follows standard SOAP protocol semantics.
Messages are sent using HTTP POST, since SOAP messages are enclosed in an XML envelope carried in the HTTP request body.
GET, UPDATE, PATCH are not applicable for SOAP operations.
Thus, the correct method is POST.

NEW QUESTION # 41
Using the Test Connectivity function, you want to test a connection to a backend system. The connection is provided by a Cloud Connector. Which parameter is required for the connection test?

- A. Subaccount ID
- B. Host
- C. Location ID
- D. Connector ID

Answer: C

Explanation:
To test a connection to a backend system that is provided by a Cloud Connector, you must specify the location ID as a parameter for the connection test. The location ID is a unique identifier that represents a Cloud Connector instance in a specific network location. It is used to route requests from SAP Integration Suite to the correct Cloud Connector instance and then to the backend system. You can find the location ID in the Cloud Connector administration UI under Configuration Location ID. Reference: Cloud Connector Connectivity Tests | SAP Help Portal, Cloud Connector Configuration | SAP Help Portal

NEW QUESTION # 42
You want to publish a new API product to the API business hub enter-prise. What is a requirement?

- A. At least two deployed API Providers
- B. At least one deployed API Proxy
- C. At least two deployed API Proxies
- D. At least one deployed API Provider

Answer: B

Explanation:
To publish a new API product to the API business hub enterprise, you need at least one deployed API proxy as a requirement. An API proxy is an API that acts as an intermediary between an API provider and an API consumer. It can be used to add security, monitoring, caching, transformation, and other features to the API provider. An API product is a bundle of one or more API proxies that are grouped together for a specific business scenario or use case. To create an API product, you need to select one or more deployed API proxies from your API portal and provide some metadata, such as name, title, description, quota limits, and so on. Then you can publish your API product to the API business hub enterprise, which is a centralized platform for discovering, consuming, and managing APIs. Reference: Create an API Proxy | SAP Help Portal, Create a Product | SAP Help Portal

NEW QUESTION # 43

You download the Performance-Traceability policy from the SAP Business Accelerator Hub and implement it in an API proxy.What can you use to view the data covered the policy?

- A. SAP Analytics Cloud
- B. A third party monitoring tool
- C. The API monitor under Monitor# Integration APIs
- D. SAP Cloud ALM

Answer: C

Explanation:
When you implement the Performance-Traceability policy in API Management:
It enables detailed monitoring of API calls, including latency, performance metrics, and message traces.
This data is available in the API Monitor (Monitor # Integration APIs) within the SAP Integration Suite cockpit.
Other options:
SAP Cloud ALM # General monitoring, not API trace-specific.
Third-party monitoring # Possible but not where SAP policy data is viewed.
SAP Analytics Cloud # For analytics, not direct monitoring of API proxy performance.
Thus, the correct monitoring location is API monitor under Monitor # Integration APIs.
