NSE5_FSM-6.3 Online Exam, Reliable Exam NSE5_FSM-6.3 Pass4sure

BONUS!!! Download part of DumpsActual NSE5_FSM-6.3 dumps for free: https://drive.google.com/open?id=1XDIyFc-LCFjg4ajjiixApo8Pbq7fneCM

Three versions for NSE5_FSM-6.3 exam cram are available. NSE5_FSM-6.3 PDF version is printable and you can learn them anytime. NSE5_FSM-6.3 Online test engine is convenient and easy to learn, and supports all web browsers and if you want to practice offline, you can also realize by this. In addition, NSE5_FSM-6.3 Online soft test engine have testing history and performance review, you can have a general review of what you have learned before start practicing. We offer you free update for one year for NSE5_FSM-6.3 training materials, and the update version will be sent to your email automatically.

Fortinet NSE5_FSM-6.3 certification exam is designed for IT professionals who wish to validate their knowledge and skills in FortiSIEM, a cybersecurity solution offered by Fortinet. FortiSIEM is a comprehensive platform that provides real-time monitoring, analysis, and reporting of security and performance data across an organization's IT infrastructure. NSE5_FSM-6.3 Exam Tests candidates on their ability to deploy, configure, and administer FortiSIEM, as well as their understanding of the product's features and capabilities.

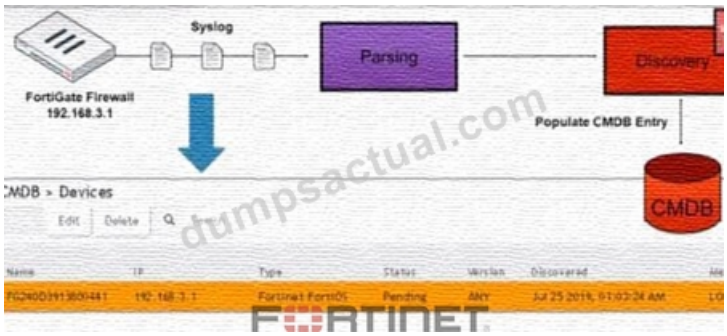
Reliable Exam NSE5_FSM-6.3 Pass4sure, Valid NSE5_FSM-6.3 Exam Papers

You can use this NSE5_FSM-6.3 simulation software without an internet connection after installation. Tracking and reporting features of our Fortinet NSE5_FSM-6.3 practice exam software makes it easier for you to identify and overcome mistakes. Customization feature of this format allows you to change time limits and questions numbers of mock exams.

Fortinet NSE5_FSM-6.3 Certification Exam is an excellent way for IT professionals to demonstrate their knowledge and skills in using FortiSIEM 6.3. Fortinet NSE 5 - FortiSIEM 6.3 certification is recognized by employers worldwide and can help IT professionals advance their careers. Fortinet NSE 5 - FortiSIEM 6.3 certification also demonstrates the candidate's commitment to continuing education and professional development.

Fortinet NSE 5 - FortiSIEM 6.3 Sample Questions (Q47-Q52):

NEW QUESTION # 47
Refer to the exhibit.



How was the FortiGate device discovered by FortiSIEM?

- A. Auto log discovery
- B. GUI log discovery
- C. Pull events discovery
- D. Syslog discovery

Answer: D

Explanation:
Discovery Methods in FortiSIEM: FortiSIEM can discover devices using various methods, including syslog, SNMP, and others.
Syslog Discovery: The exhibit shows that the FortiGate device is discovered by FortiSIEM using syslog.
* Syslog Parsing: The syslog messages sent by the FortiGate device are parsed by FortiSIEM to extract relevant information.
* CMDB Entry: Based on the parsed information, an entry is populated in the Configuration Management Database (CMDB) for the device.
Evidence in Exhibit: The exhibit shows the syslog flow from the FortiGate Firewall to the parsing and discovery process, resulting in the device being listed in the CMDB with the status "Pending." References: FortiSIEM 6.3 User Guide, Device Discovery section, which explains how syslog discovery works and how devices are added to the CMDB based on syslog data.

NEW QUESTION # 48
What are the four possible incident status values?

- A. Active, cleared, cleared manually, system cleared
- B. Active, auto cleared, manual, false positive
- C. Active, dosed, cleared, open
- D. Active, closed, manual, resolved

Answer: C

Explanation:
Incident Status Values: Incident statuses in FortiSIEM help administrators track and manage the lifecycle of incidents from detection to resolution.
Four Possible Status Values:
* Active: Indicates that the incident is currently ongoing and needs attention.
* Closed: Indicates that the incident has been resolved or addressed.
* Cleared: Indicates that the incident has been resolved automatically based on predefined conditions.
* Open: Indicates that the incident is acknowledged and under investigation but not yet resolved.
Usage: These statuses help in prioritizing and tracking incidents effectively, ensuring that all incidents are appropriately managed.
References: FortiSIEM 6.3 User Guide, Incident Management section, which details the different status values and their meanings.

NEW QUESTION # 49
In the rules engine, which condition instructs FortiSIEM to summarize and count the matching evaluated data?

- A. Time Window
- B. Filters
- C. Aggregation
- D. Group By

Answer: C

NEW QUESTION # 50
IF the reported packet loss is between 50% and 98%. which status is assigned to the device in the Availability column of summary dashboard?

- A. Down status is assigned because of packet loss.
- B. Up status is assigned because of received packets.
- C. Critical status is assigned because of reduction in number of packets received.
- D. Degraded status is assigned because of packet loss

Answer: D

Explanation:
Device Status in FortiSIEM: FortiSIEM assigns different statuses to devices based on their operational state and performance metrics.
Packet Loss Impact: The reported packet loss percentage directly influences the status assigned to a device.
Packet loss between 50% and 98% indicates significant network issues that affect the device's performance.
Degraded Status: When packet loss is between 50% and 98%, FortiSIEM assigns a "Degraded" status to the device. This status indicates that the device is experiencing substantial packet loss, which impairs its performance but does not render it completely non-functional.
Reasoning: The "Degraded" status helps administrators identify devices with serious performance issues that need attention but are not entirely down.
References: FortiSIEM 6.3 User Guide, Device Availability and Status section, explains the criteria for assigning different statuses based on performance metrics such as packet loss.

NEW QUESTION # 51
If a performance rule is triggered repeatedly due to high CPU use, what occurs in the incident table?

- A. The incident status changes to Repeated, and the First Seen and Last Seen times are updated.
- B. A new incident is created based on the Rule Frequency value, and the First Seen and Last Seen times ate updated.
- C. A now incident is created each time the rule is triggered. and the First Seen and Last Seen times are updated.
- D. The Incident Count value increases, and the First Seen and Last Seen times update.

Answer: D

Explanation:
* Incident Management in FortiSIEM: FortiSIEM tracks incidents and their occurrences to help administrators manage and respond to recurring issues.
* Performance Rule Triggering: When a performance rule, such as one for high CPU usage, is repeatedly triggered, FortiSIEM updates the corresponding incident rather than creating a new one each time.
* Incident Table Updates:
Incident Count: The Incident Count value increases each time the rule is triggered, indicating how many times the incident has occurred.
First Seen and Last Seen Times: These timestamps are updated to reflect the first occurrence and the most recent occurrence of the incident.
* Reference: FortiSIEM 6.3 User Guide, Incident Management section, explains how FortiSIEM handles recurring incidents and updates the incident table accordingly.

NEW QUESTION # 52
