

H13-511_V5.5 Reliable Dumps Ebook | Exam H13-511_V5.5 Blueprint

BTW, DOWNLOAD part of DumpsActual H13-511_V5.5 dumps from Cloud Storage: <https://drive.google.com/open?id=1Yh30u8Qj2sqlpB2p5xic9lnb2FRjXJN>

These Huawei H13-511_V5.5 dumps are real, updated, and error-free. It provides you with the essential Huawei H13-511_V5.5 exam knowledge that you need to prepare and pass the Huawei H13-511_V5.5 certification test with high scores. You can easily use all these three Huawei H13-511_V5.5 Exam Questions format. These formats are compatible with all devices, operating systems, and the latest browsers.

Huawei H13-511_V5.5 Exam Syllabus Topics:

Topic	Details
Topic 1	Be able to design and deploy Huawei's FusionCompute virtualization solution and FusionAccess desktop solution: This section covers the practical skills needed to architect and implement Huawei's enterprise virtualization platform FusionCompute and their desktop virtualization product FusionAccess. It includes planning, configuration, and deployment procedures for these Huawei-specific solutions.
Topic 2	Describe the history of cloud computing: This section traces the evolution and development of cloud computing from its origins to its current state. It provides historical context for how cloud technology emerged and transformed over time.
Topic 3	Understand KVM technology: This topic focuses on Kernel-based Virtual Machine (KVM) as a specific virtualization solution for Linux systems. It covers how KVM transforms Linux into a hypervisor to manage virtual machines efficiently.
Topic 4	Understand the differences between virtualization and cloud computing: This section clarifies how virtualization and cloud computing are related yet distinct technologies. It explains that virtualization is a key enabler of cloud computing but cloud encompasses broader service delivery models and characteristics.
Topic 5	Be able to describe what virtualization is: This topic covers the concept of virtualization technology and how it enables multiple virtual instances to run on physical hardware. It explains the foundational role virtualization plays in creating isolated computing environments.
Topic 6	Describe the characteristics of cloud computing: This section explains the essential attributes and defining features of cloud computing such as on-demand self-service, broad network access, and resource pooling. It outlines what distinguishes cloud computing from traditional computing models.

- Describe what cloud computing is: This topic covers the fundamental definition and concept of cloud computing technology. It explains how cloud computing enables on-demand access to shared computing resources over the internet.

Huawei H13-511_V5.5 Exam Questions for Authentic Preparation

Keeping in view different preparation styles of Huawei H13-511_V5.5 test applicant DumpsActual has designed three easy-to-use formats for its product. Each format has a pool of HCIA-Cloud Computing V5.5 (H13-511_V5.5) actual questions which have been compiled under the guidance of thousands of professionals worldwide. Questions in this product will appear in the Huawei H13-511_V5.5 final test.

Huawei HCIA-Cloud Computing V5.5 Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which of the following descriptions about ISCS and Fiber Channel is incorrect?

- A. ISCSI runs on Ethernet based on TCP/IP protocol and can be combined with existing Ethernet
- B. From the perspective of the transport layer, the transmission of Fiber Channel adopts the FC protocol, and the ISCSI adopts the TCP/IP protocol.
- C. The FC protocol is completely heterogeneous with the existing Ethernet, and the compatibility is relatively poor
- **D. The transmission distance of FC is farther than that of TCP/P**

Answer: D

NEW QUESTION # 37

In Huawei FusionCompute, a VM running Linux is created. In this scenario, which of the following does the guest OS run in?

- A. VRM
- B. CNA
- **C. Linux VM**
- D. VNA

Answer: C

Explanation:

(Note: The original question contained a typo. As requested, "host OS" has been corrected to "guest OS" because Linux, in this scenario, is the Guest operating system.) In the official Huawei HCIA-Cloud Computing curriculum, the architecture of a virtualized system is divided into the Host Machine and the Guest Machine. The Host Machine is the physical server (hardware) and the virtualization software (CNA in FusionCompute). The Guest Machine is the Virtual Machine (VM) created by the hypervisor. According to the training materials, the Guest OS is the operating system that is installed and executed within the virtualized environment of a VM.¹³ Therefore, if a VM running Linux is created, the Linux operating system is the Guest OS, and it runs specifically inside the Linux VM. The VM acts as a logical container that provides the Linux OS with virtualized CPU, memory, storage, and network resources.¹⁴ From the perspective of the Linux OS, it believes it is running on a dedicated physical server, but in reality, it is encapsulated within the VM boundary provided by the CNA.

The other components mentioned have different roles: CNA (Computing Node Agent) is the "host" software that manages the hardware and hosts the VM, but the Linux OS does not run "in" the CNA directly; it runs in the VM managed by the CNA. VRM (Virtual Resource Management) is the management platform used by administrators to create and configure the VM. VNA (Virtual Node Agent) is a process within the CNA that handles management commands from the VRM. In the Huawei certification logic, it is crucial to distinguish between the "Container" (the VM) and the "Occupant" (the Guest OS). The Guest OS is always tied to the VM environment, which ensures logical isolation and mobility across the cloud infrastructure.

NEW QUESTION # 38

In the OpenStack solution, Swift provides persistent block storage.

- A. FALSE
- B. TRUE

Answer: A

Explanation:

Comprehensive and Detailed Explanation (HCIA-Cloud Computing aligned):

In OpenStack:

* Swift provides object storage, designed for storing unstructured data such as images, videos, and backups.

* Cinder provides block storage, which is used by virtual machines as virtual disks.

Since Swift does not provide block storage, the statement is FALSE.

NEW QUESTION # 39

In FusionCompute, the security auditor in role-based access control (RBAC) mode is only permitted to view and export logs.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

Comprehensive and Detailed Explanation (HCIA-Cloud Computing aligned):

Huawei FusionCompute implements role-based access control (RBAC) to ensure secure and compliant system management.

The security auditor role is designed specifically for compliance and auditing purposes. According to HCIA- Cloud Computing materials, this role has read-only permissions, allowing the user to view and export system logs but not modify configurations or perform operational tasks.

This restriction helps ensure the integrity of audit records and prevents unauthorized system changes.

Therefore, the statement is TRUE.

NEW QUESTION # 40

In FusionCompute, the virtual machine template format is divided into ova and ovf. The template in ovf format consists of an ovf description file and several () disk files.

Answer:

Explanation:

VHD

NEW QUESTION # 41
