

Reliable 1z1-076 Braindumps Sheet - Reliable 1z1-076 Exam Price

P.S. Free & New 1z1-076 dumps are available on Google Drive shared by Actual4Labs: https://drive.google.com/open?id=1_jCT5wQqCt06-AJ3bgn2MjpcSExtDg

All contents of 1z1-076 training guide are being explicit to make you have explicit understanding of this exam. Their contribution is praised for their purview is unlimited. None cryptic contents in 1z1-076 learning materials you may encounter. And our 1z1-076 Exam Questions are easy to understand and they are popular to be sold to all over the world. Just look at the comments on the website, then you will know that we have a lot of loyal customers.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 3	<ul style="list-style-type: none"> Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.

Topic 4	<ul style="list-style-type: none"> • Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 5	<ul style="list-style-type: none"> • Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 6	<ul style="list-style-type: none"> • Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Topic 7	<ul style="list-style-type: none"> • Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 8	<ul style="list-style-type: none"> • Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 9	<ul style="list-style-type: none"> • Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.
Topic 10	<ul style="list-style-type: none"> • Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 11	<ul style="list-style-type: none"> • Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 12	<ul style="list-style-type: none"> • Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 13	<ul style="list-style-type: none"> • Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.

Reliable 1z1-076 Exam Price | New 1z1-076 Exam Name

Our company is a multinational company which is famous for the 1z1-076 training materials in the international market. After nearly ten years' efforts, now our company have become the topnotch one in the field, therefore, if you want to pass the 1z1-076 exam as well as getting the related certification at a great ease, I strongly believe that the study materials compiled by our company is your solid choice. To be the best global supplier of electronic study materials for our customers through innovation and enhancement of our customers' satisfaction has always been our common pursuit. The advantages of our 1z1-076 Study Guide are as follows.

Oracle Database 19c: Data Guard Administration Sample Questions (Q92-Q97):

NEW QUESTION # 92

Which two Data Guard features require the use of flashback database by the broker?

- A. Far Sync Instances
- **B. Snapshot Standby databases**
- C. Real Time Query
- D. Read-Mostly physical standby implementations

- E. Fast-Start Failover

Answer: B,E

NEW QUESTION # 93

Which THREE are true about using flashback database in a Data Guard environment?

- A. It may be used to flash back a physical standby that receives redo from a far sync instance.
- B. When a flashback database operation is performed on a primary database, a logical standby database is also flashed back automatically.
- C. You can use it when real-time apply is enabled in case the physical standby suffers from logical corruption.
- D. It may not be used to flash back a primary database after a failover to a physical standby.
- E. You can use it when real-time apply is enabled in case the phylt may not be used to flash back a primary database after a failover to a logical standby.
- F. When a flashback database operation is performed on a primary database, a physical standby database is also flashed back automatically.

Answer: A,C,D

Explanation:

Flashback Database is a feature that allows reverting a database to a previous point in time, which is extremely useful in various Data Guard configurations:

It may be used to flash back a physical standby that receives redo from a far sync instance (C): Flashback Database can be used on a physical standby database to revert it to a past point in time, even when it is receiving redo data from a far sync instance. This can be particularly useful to recover from logical corruptions or unwanted changes.

You can use it when real-time apply is enabled in case the physical standby suffers from logical corruption (D): Even when real-time apply is enabled, which allows redo data to be applied to the standby database as soon as it is received, Flashback Database can be used to revert the physical standby database to a point in time before the logical corruption occurred.

It may not be used to flash back a primary database after a failover to a physical standby (E): After a failover has occurred from a primary to a physical standby database, making the standby the new primary, Flashback Database cannot be used to revert the old primary database to a state before the failover because the failover operation makes irreversible changes to the database role and configuration.

NEW QUESTION # 94

Attempting to start the observer raises an error:

```
DGMGRL> start observer;
```

```
DGM-16954: Unable to open and lock the Observer configuration file
```

```
Failed.
```

Identify two possible ways to start the observer successfully.

- A. Start the observer using a different observer configuration file.
- B. Start the observer in a different working directory.
- C. Create a broker configuration and enable Fast-Start Failover before starting the observer.
- D. Set the ObserverOverride property to TRUE before starting the observer.
- E. Enable Fast-Start Failover before starting the observer.

Answer: A,B

NEW QUESTION # 95

Examine the following parameter settings of the physical standby database:

```
* STANDBY_FILE_MANAGEMENT=AUTO
```

```
* ENABLED_PDBS_ON_STANDBY=<null>
```

During which TWO tasks are files automatically created in the physical standby database after structure changes on the primary database?

- A. Creating a PDB from the existing PDB within the same CDB
- B. Renaming a data file in the primary database
- C. Performing transportable tablespaces
- D. Adding a data file or creating a tablespace
- E. Adding or dropping a redo file group

Answer: A,D

Explanation:

When STANDBY_FILE_MANAGEMENT is set to AUTO, the Oracle Data Guard automatically creates, deletes, and renames files on the standby database to match the changes made on the primary database. The tasks that lead to the automatic creation of files on the standby include:

Adding a data file or creating a tablespace (C): When a new tablespace is created or a new data file is added on the primary database, the standby database automatically replicates this action, maintaining structural consistency with the primary database.

Creating a PDB from the existing PDB within the same CDB (D): Creating a new Pluggable Database (PDB) within a Multitenant Container Database (CDB) on the primary database triggers an automatic creation of the corresponding PDB within the standby CDB.

NEW QUESTION # 96

Examine the procedure that you plan to execute on your logical standby:

SQL> EXECUTE DBMS_LOGSTDBY.SKIP(stmt => 'DML', schema_name => 'HR', object_name => 'EMPLOYEE'); What is a prerequisite for execution of this procedure?

- A. Execute the DBMS_LOGSTDBY.APPLY_SET procedure to record errors that might cause SQL Apply to stop.
- B. Stop SQL Apply on the logical standby database.
- C. Change the redo transport mode if necessary to ASYNC.
- D. Stop redo transport to the logical standby database.

Answer: B

NEW QUESTION # 97
