The certification is necessary to get a job in your desired Microsoft company. Success in the test gives you an edge over the others because you will have certified skills that will make a good impression on the interviewer. Most people preparing for the Designing and Implementing a Microsoft Azure AI Solution (AI-102) exam are confused about preparation. How will they get real and updated Designing and Implementing a Microsoft Azure AI Solution (AI-102) exam questions? In the case of studying with outdated Designing and Implementing a Microsoft Azure AI Solution (AI-102) practice questions, you will fail and lose your resources.

The AI-102 certification exam covers a wide range of topics, including Azure Cognitive Services, Natural Language Processing (NLP), and Computer Vision. You will be tested on your ability to develop and implement AI solutions using various Azure services and tools.

To be eligible for AI-102 exam, candidates must have a fundamental understanding of Azure services, including Azure storage, compute, networking, and security. They should also have experience with data science concepts and machine learning models. The AI-102 exam is intended for professionals who work as AI engineers, data scientists, or developers who want to enhance their expertise in AI and Azure. Passing AI-102 Exam validates their skills in designing and implementing end-to-end AI solutions that can leverage Azure AI services and tools.

The Microsoft AI-102 exam focuses on various Azure services that are used to build AI solutions. The candidates are expected to have a good understanding of Azure Machine Learning, Cognitive Services, and Bot Framework. AI-102 exam also covers topics related to data storage, data processing, and data visualization using Azure services.

Valid AI-102 Exam Online & Standard AI-102 Answers

The contents of our AI-102 study materials are all compiled by industry experts based on the examination outlines and industry development trends over the years. AI-102 exam guide is not simply a patchwork of test questions, but has its own system and levels of hierarchy, which can make users improve effectively. Our AI-102 Study Materials contain test papers prepared by examination specialists according to the characteristics and scope of different subjects. And if you study with our AI-102 exam questions, you are bound to pass the AI-102 exam.

Microsoft Designing and Implementing a Microsoft Azure AI Solution Sample Questions (Q360-Q365):

NEW QUESTION # 360

You have an Azure subscription that contains an Azure AI Document Intelligence resource named Aldoc1 in the S0 tier.
You have the files shown in the following table.

You need to train a custom extraction model by using Aldoc1.
Which files can you upload to Document Intelligence Studio?

- A. File1, File2, File3, File4, and File5
- **B. File1, and File2 only**
- C. File1, File2, and File4 only
- D. File1, and File5 only
- E. File2, File4, and File5 only

Answer: B

Explanation:

You have an Azure AI Document Intelligence resource named AIDoc1 in the S0 tier .

You need to identify which files can be uploaded to Document Intelligence Studio for training a custom extraction model.

Supported formats: PDF, TIFF, JPG, PNG, BMP.

Maximum file size: 500 MB per document.

Password-protected documents: Not supported.

S0 tier limits: Same as above (50 pages per document limit also applies).

Now checking the given files:

File1 (JPG, 400 MB, No password) # Supported (under 500 MB, allowed format).

File2 (PDF, 250 MB, No password) # Supported.

File3 (PNG, 180 MB, Password-protected) # Not supported (password locked).

File4 (XLSX, 900 MB) # Not supported (format not supported, exceeds 500 MB).

File5 (PDF, 160 MB, Password-protected) # Not supported (password locked).

The Answer: C. File1, File2, and File4 only # Wait, check again: XLSX is not supported, so File4 is invalid. Only File1 and File2 are valid.

Correct Final Answer: A. File1, and File2 only

NEW QUESTION # 361

You build a chatbot by using Azure OpenAI Studio.

You need to ensure that the responses are more deterministic and less creative.

Which two parameters should you configure? To answer, select the appropriate parameters in the answer area.

NOTE: Each correct answer is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 362

You are developing an internet-based training solution for remote learners.

Your company identifies that during the training, some learners leave their desk for long periods or become distracted.

You need to use a video and audio feed from each learner's computer to detect whether the learner is present and paying attention.

The solution must minimize development effort and identify each learner.

Which Azure Cognitive Services service should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Scenario Recap You are building a remote training monitoring solution.

* Requirement: Use video and audio feeds to detect if a learner is present, paying attention, and talking.

* Services available: Face, Speech, Text Analytics.

* From a learner's video feed, verify whether the learner is present.

- * The Face API can detect and identify faces in a video feed.
- * It can tell if a person is present and recognized, fulfilling the requirement.
- * From a learner's facial expression in the video feed, verify whether the learner is paying attention.
- * Again, the Face API provides facial expression and emotion recognition (happiness, anger, neutral, etc.).
- * This can be mapped to "paying attention vs. distracted."
- * From a learner's audio feed, detect whether the learner is talking.
- * The Speech service detects spoken input and can determine if speech is present.
- * Text Analytics works on text (not raw audio) and is therefore not appropriate here.

Analysis

- * From a learner's video feed, verify whether the learner is present: Face
- * From a learner's facial expression in the video feed, verify whether the learner is paying attention: Face
- * From a learner's audio feed, detect whether the learner is talking: Speech Final Answer (Answer Area Selections)
- * Face API - Face detection & identification
- * Face API - Emotion recognition
- * Azure Speech service

NEW QUESTION # 363

You are building a chatbot by using the Microsoft Bot Framework Composer.

You have the dialog design shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: No

User.name is a property.

Box 2: Yes

Box 3: Yes

The coalesce() function evaluates a list of expressions and returns the first non-null (or non-empty for string) expression.

NEW QUESTION # 364

You are developing a method for an application that uses the Azure AI Translator API.

The method will receive the content of a webpage, and then translate the content into Greek (el).

The result will also contain a transliteration that uses the Roman alphabet.

You need to create the URI for the call to the Azure AI Translator API.

You have the following URI.

<https://api.cognitive.microsofttranslator.com/translate?api-version=3.0> Which three additional query parameters should you include in the URI? Each correct answer presents part of the solution. (Choose three.) NOTE: Each correct selection is worth one point.

- A. from=el
- B. textType=plain
- C. to=el
- D. toScript=Cyrl
- E. toScript=Latn
- F. textType=html

Answer: C,E,F

Explanation:

C: textType is an optional parameter. It defines whether the text being translated is plain text or HTML text (used for web pages).

D: to is a required parameter. It specifies the language of the output text. The target language must be one of the supported languages included in the translation scope.

F: toScript is an optional parameter. It specifies the script of the translated text.

We use Latin (Roman alphabet) script.
