Salesforce Certified Platform Developer Sample Questions (Q239-Q244):

NEW QUESTION # 239

A developer has the following requirements:

- Calculate the total amount on an Order.
- Calculate the line amount for each Line Item based on quantity selected and price.
- Move Line Items to a different Order if a Line Item is not in stock.

Which relationship implementation supports these requirements on its own?

- A. Line Item has a re-parentable lookup field to Order.
- B. Order has a re-parentable lookup field to Line Item.
- C. Line Item has a re-parentable master-detail field to Order.

- D. Order has a re-parentable master-detail field to Line Item.

Answer: C

NEW QUESTION # 240

A developer created this Apex trigger that calls MyClass.myStartmethod:

The developer creates a test method that calls MyClass.myStartmethod directly, resulting in 81% overall code coverage.

What happens when the developer tries to deploy the ... and two classes to production, assuming no other code exists?

- A. The deployment fails because no assertions were made in the test method.
- B. The deployment passes because both classes and the trigger were included in the deployment.
- C. The deployment passes because the Apex code has the required 75% code coverage.
- **D. The deployment fails because the Apex-MQ has no code coverage.**

Answer: D

NEW QUESTION # 241
