MuleSoft-Integration-Associate PDF Questions [2026] -Get Excellent Scores

Are you tired of feeling overwhelmed and unsure about how to prepare for the MuleSoft-Integration-Associate exam? Are you ready to take control of your future and get the Salesforce Certified MuleSoft Integration Associate Exam (MuleSoft-Integration-Associate) certification you need to accelerate your career? If so, it's time to visit ExamsTorrent and download real Salesforce MuleSoft-Integration-Associate Exam Dumps. Our team of experts has designed a MuleSoft-Integration-Associate Exam study material that has already helped thousands of students just like you achieve their goals. We offer a comprehensive Salesforce Certified MuleSoft Integration Associate Exam (MuleSoft-Integration-Associate) practice exam material that is according to the content of the MuleSoft-Integration-Associate test.

Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20
An organization is choosing between API-led connectivity and other integration approaches According to MuleSoft which business benefit is associated with an API-led connectivity approach using Anypoint Platform?

- A. Increased developer productivity through self-service of API assets
- B. Higher outcome repeatability through centralized development
- C. Improved security through adoption of monolithic architectures
- D. Greater project predictability through tight coupling of systems

Answer: A

Explanation:
API-led connectivity is an approach that emphasizes the reuse of APIs to enhance agility and productivity.
Here's a detailed explanation of the associated business benefits:
* Self-Service of API Assets:
* Definition: API-led connectivity enables developers to discover, access, and use APIs through a centralized platform like Anypoint Exchange, promoting self-service.
* Productivity: Developers can quickly find and integrate existing APIs, reducing the time and effort required to build new functionalities from scratch.
* Business Benefits:
* Reusability: Encourages the reuse of APIs across projects, leading to faster development cycles and reduced duplication of efforts.
* Agility: Enhances the ability to respond to changing business needs by providing a flexible and modular integration framework.
* Scalability: Facilitates the scaling of integration solutions as business requirements grow.

NEW QUESTION # 21
A Kubernetes controller automatically adds another pod replica to the resource pool in response to increased application load
Which scalability option is the controller implementing?

- A. Diagonal
- B. Down
- C. Vertical
- D. Horizontal

Answer: D

Explanation:
Kubernetes offers several scalability options to handle varying application loads. The scenario described involves adding another pod replica in response to increased load, which is a form of horizontal scaling. Here' s a detailed explanation:
* Horizontal Scaling:
* Definition: Horizontal scaling, also known as scaling out, involves adding more instances (pods) to distribute the load and increase capacity.
* Implementation in Kubernetes: Kubernetes uses controllers like the Horizontal Pod Autoscaler (HPA) to automatically adjust the number of pod replicas based on observed CPU utilization or other select metrics.
* Benefits:
* Load Distribution: By adding more pod replicas, the load is evenly distributed, reducing the risk of any single pod being overwhelmed.
* Fault Tolerance: Horizontal scaling enhances fault tolerance and availability, as multiple pod replicas can handle requests if one fails.
* Automatic Scaling:
* Kubernetes Controller: The HPA continuously monitors the application load and adjusts the number of pod replicas accordingly, ensuring optimal performance.

NEW QUESTION # 22
A system administrator needs to determine when permissions were last changed for an Anypoint Platform user.
Which Anypoint Platform component should the administrator use to obtain this information?

- A. Audit Logging

- B. Anypoint Monitoring
- C. Mule Stack Traces
- D. Anypoint Studio

Answer: A

Explanation:
Anypoint Platform provides various tools and components for managing and monitoring the platform and its activities. To determine when permissions were last changed for an Anypoint Platform user, Audit Logging is the appropriate component to use. Here's a detailed explanation:
* Audit Logging:
* Purpose: Audit logs capture detailed records of user activities and changes within the Anypoint Platform, including permission changes.
* Access: Administrators can access audit logs through the Anypoint Platform's management console.
* Information Captured:
* User Actions: Logs include information about user logins, permission changes, API deployments, and other critical actions.
* Timestamp: Each log entry is timestamped, providing the exact time and date when the permissions were changed.
* Use Case:
* Monitoring and Security: Audit logs are crucial for monitoring platform activities, ensuring compliance, and investigating security incidents.

* MuleSoft Documentation: Anypoint Platform Audit Logging

NEW QUESTION # 23
An integration team follows MuleSofts recommended approach to full lifecycle API development Which activity should this team perform during the API implementation phase?

- A. Design the API specification
- B. Use the API specification to build the MuleSoft application
- C. Use the API specification to monitor the MuleSoft application
- D. Validate the API specification

Answer: B

Explanation:
MuleSoft recommends a full lifecycle API development approach which includes several phases such as design, implementation, testing, deployment, and management. During the API implementation phase, the primary activity is to use the API specification to build the MuleSoft application. Here's a detailed explanation:
* API Design:
* Create API Specification: Initially, an API specification is created using RAML or OAS (OpenAPI Specification) to define the API's structure, endpoints, request/response formats, and security requirements.
* API Implementation:
* Build Mule Application: Using the API specification as a blueprint, the development team implements the MuleSoft application. This involves creating flows, integrating with backend systems, and ensuring the API functions as specified.
* APIKit: MuleSoft provides APIKit, a tool that automatically generates Mule flows based on the API specification, speeding up the development process.
* Testing: During implementation, unit tests (using MUnit) and integration tests are created to ensure the API behaves as expected.
* Validation and Monitoring:
* Validate Against Specification: Throughout the implementation phase, the API is continuously validated against the original specification to ensure compliance.
* Deployment and Monitoring: Post-implementation, the API is deployed, and tools like Anypoint Monitoring are used to monitor its performance and usage.

NEW QUESTION # 24
Which role is primarily responsible for building API implementations as part of a typical MuleSoft integration project?

- A. API Designer
- B. Integration Architect
- C. Operations
- D. API Developer

Answer: D

Explanation:
In a typical MuleSoft integration project, the role of building API implementations is primarily assigned to an API Developer. Here's a detailed explanation:
* API Developer:
* Responsibilities: Focuses on implementing the technical aspects of APIs, including coding, testing, and deploying API endpoints.
* Skills: Requires proficiency in MuleSoft Anypoint Platform, MuleSoft connectors, and API development best practices.
* Typical Tasks:
* API Implementation: Writing code to implement API logic and data processing.
* Integration: Connecting APIs to backend systems, databases, and external services.
* Testing: Developing and executing unit and integration tests to ensure API functionality and reliability.
