Questions and Answers for the SPLK-3002 Exam, Authentic 2026

2026 Latest DumpsReview SPLK-3002 PDF Dumps and SPLK-3002 Exam Engine Free Share: https://drive.google.com/open?id=1AcBHAi_NY7CUTUHMhIxxna7zUW4nYJvh

The accuracy rate of SPLK-3002 test training materials of DumpsReview is high with wide coverage. It will be the most suitable SPLK-3002 test training materials and the one you need most to pass SPLK-3002 exam. We promise that we will provide renewal service freely as long as one year after you purchase our SPLK-3002 Dumps; if you fail SPLK-3002 test or there are any quality problem of our SPLK-3002 exam dumps and training materials, we will give a full refund immediately.

Splunk SPLK-3002 certification exam is a highly respected and sought-after certification for IT professionals. Splunk IT Service Intelligence Certified Admin certification is designed for individuals who want to demonstrate their expertise in implementing and managing Splunk IT Service Intelligence (ITSI) solutions. SPLK-3002 exam is intended to validate the skills and knowledge required to administer and maintain Splunk ITSI environments.

The Splunk SPLK-3002 exam consists of 65 multiple-choice questions that must be completed within 90 minutes. The questions cover topics such as data ingestion, data parsing, field extraction, event types, search commands, macros, and data models. SPLK-3002 Exam also covers ITSI-specific topics such as service analyzers, glass tables, KPIs, and notable events. Candidates must have a good understanding of these topics to pass the exam.

To take the SPLK-3002 exam, candidates must have a solid understanding of ITSI and its components. They should be familiar with the ITSI architecture, including how to install and configure it, how to manage data inputs, and how to use ITSI to monitor and analyze service performance. Candidates should also have experience with Splunk Enterprise and be able to use it to create

dashboards and reports.

Don't Miss Up to one year of Free Updates – Buy Splunk SPLK-3002 Exam Dumps Now

In order to help customers, who are willing to buy our SPLK-3002 test torrent, make good use of time and accumulate the knowledge, Our company have been trying our best to reform and update our Splunk IT Service Intelligence Certified Admin exam tool. "Quality First, Credibility First, and Service First" is our company's purpose, we deeply hope our SPLK-3002 Study Materials can bring benefits and profits for our customers. So we have been persisting in updating our SPLK-3002 test torrent and trying our best to provide customers with the latest study materials.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q74-Q79):

NEW QUESTION # 74
What happens when an anomaly is detected?

- A. A SNMP trap will be sent.
- B. An anomaly alert will appear as a notable event in Episode Review.
- C. An anomaly alert will appear in core splunk, in index=main.
- D. A separate correlation search needs to be created in order to see it.

Answer: B

Explanation:
When an anomaly is detected in Splunk IT Service Intelligence (ITSI), it typically generates a notable event that can be reviewed and managed in the Episode Review dashboard. The Episode Review is part of ITSI's Event Analytics framework and serves as a centralized location for reviewing, annotating, and managing notable events, including those generated by anomaly detection. This process enables IT operators and analysts to efficiently identify, prioritize, and respond to potential issues highlighted by the anomaly alerts.
The integration of anomaly alerts into the Episode Review dashboard streamlines the workflow for managing and investigating these alerts within the broader context of IT service management and operational intelligence.

NEW QUESTION # 75
Within a correlation search, dynamic field values can be specified with what syntax?

- A. <fieldname /fieldname>
- B. %fieldname%
- C. eval(fieldname)
- D. fieldname

Answer: A

Explanation:
Reference: https://docs.splunk.com/Documentation/Splunk/8.2.2/Search/Searchindexes B is the correct answer because dynamic field values can be specified with <fieldname /fieldname> syntax within a correlation search. This syntax allows you to insert values from fields returned by the correlation search into alert actions such as email subject or body. For example, <host /host> inserts the value of the host field into the email. References: [Use dynamic field values in correlation searches in ITSI]

NEW QUESTION # 76
Which of the following is the best use case for configuring a Multi-KPI Alert?

- A. Comparing content between two notable events.
- B. Raising an alert when one or more KPIs indicate an outage is occurring.
- C. Comparing anomaly detection between two KPIs.
- D. Using machine learning to evaluate when data falls outside of an expected pattern.

Answer: B

Explanation:
Reference:
A multi-KPI alert is a type of correlation search that is based on defined trigger conditions for two or more KPIs. When trigger conditions occur simultaneously for each KPI, the search generates a notable event. For example, you might create a multi-KPI alert based on two common KPIs: CPU load percent and web requests. A sudden simultaneous spike in both CPU load percent and web request KPIs might indicate a DDOS (Distributed Denial of Service) attack. Multi-KPI alerts can bring such trending behaviors to your attention early, so that you can take action to minimize any impact on performance. Multi-KPI alerts are useful for correlating the status of multiple KPIs across multiple services. They help you identify causal relationships, investigate root cause, and provide insights into behaviors across your infrastructure. The best use case for configuring a multi-KPI alert is to raise an alert when one or more KPIs indicate an outage is occurring, such as when the service health score drops below a certain threshold or when multiple KPIs have critical severity levels. Reference: Create multi-KPI alerts in ITSI

NEW QUESTION # 77
There are two Smart Mode configuration settings that control how fields affect grouping. Which of these is correct?

- A. Text deviation and category similarity.
- B. Text similarity and category similarity.
- C. Text deviation and category deviation.
- D. Text similarity and category deviation.

Answer: B

Explanation:
In the context of Smart Mode configuration within Splunk IT Service Intelligence (ITSI), the two settings that control how fields affect grouping are "Text similarity" and "Category similarity." Smart Mode is a feature used in event grouping that leverages machine learning to automatically group related events. "Text similarity" refers to how closely the textual content of event fields must match for those events to be grouped together, taking into account commonalities in strings or narratives within the event data. "Category similarity," on the other hand, relates to the similarity in the categorical attributes of events, such as event types or source types, which helps in clustering events that are similar in nature or origin. Both of these settings are crucial in determining how events are grouped in ITSI, influencing the granularity and relevance of the event groupings based on textual and categorical similarities.

NEW QUESTION # 78
In maintenance mode, which features of KPIs still function?

- A. New KPIs can be created, but existing KPIs are locked.
- B. KPI calculations and threshold settings can be modified.
- C. KPI searches will execute but will be buffered until the maintenance window is over.
- D. KPI searches still run during maintenance mode, but results go to itsi_maintenance_summary index.

Answer: C

Explanation:
It's a best practice to schedule maintenance windows with a 15- to 30-minute time buffer before and after you start and stop your maintenance work. This gives the system an opportunity to catch up with the maintenance state and reduces the chances of ITSI generating false positives during maintenance operations.
Reference:
A is the correct answer because KPI searches still run during maintenance mode, but the results are buffered until the maintenance window is over. This means that no alerts are triggered during maintenance mode, but once it ends, the buffered results are processed and alerts are generated if necessary. You cannot create new KPIs or modify existing KPIs during maintenance mode. Reference: [Overview of maintenance windows in ITSI]

NEW QUESTION # 79
......

Managing time during the Splunk SPLK-3002 exam is a challenging task. Most candidates cannot manage their time during the Splunk SPLK-3002 exam, leave the questions, and fail. Time management skills can help students gain excellent marks in the

SPLK-3002 Exam. Splunk SPLK-3002 practice exam on the software helps you identify which kind of Splunk IT Service Intelligence Certified Admin SPLK-3002 questions are more time-consuming, and they would be able to assess their efficiency in answering questions.
