GICSP Exam Quiz | Valid GICSP Exam Tutorial

our GICSP practice torrent is the most suitable learning product for you to complete your targets. It is never too late to try new things no matter how old you are. Someone always give up their dream because of their ages, someone give up trying to overcome GICSP exam because it was difficult for them. Now, no matter what the reason you didn't pass the exam, our study materials will try our best to help you. If you are not sure what kinds of GICSP Exam Question is appropriate for you, you can try our free demo of the PDF version. There must be one that suits you best.

The best way for candidates to know our Global Industrial Cyber Security Professional (GICSP) GICSP training dumps is downloading our free demo. We provide free PDF demo for each exam. This free demo is a small part of the official complete GIAC GICSP training dumps. The free demo can show you the quality of our exam materials. You can download any time before purchasing.

Quiz 2026 GICSP: Marvelous Global Industrial Cyber Security Professional (GICSP) Exam Quiz

If you want to pass your GICSP exam and get the GICSP certification which is crucial for you successfully, I highly recommend that you should choose the GICSP certification preparation materials from our company so that you can get a good understanding of the GICSP Exam that you are going to prepare for. We believe that if you decide to buy the GICSP exam materials from our company, you will pass your exam and get the GICSP certification in a more relaxed way than other people.

GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q31-Q36):

NEW QUESTION # 31
What should be considered when implementing fieldbus protocols over an Ethernet network?

- A. Different protocols will need a bridging device to talk to each other
- B. The network cannot be segmented into smaller subnets or VLANs
- C. Communications between machines are limited to one host at a time
- D. Different protocols cannot route across the same infrastructure

Answer: A

Explanation:
Fieldbus protocols are industrial communication standards used at lower levels of ICS networks. When these protocols are implemented over Ethernet, several considerations arise:
Different fieldbus protocols (such as Modbus TCP, PROFINET, EtherNet/IP) have unique data formats and communication methods.
To enable communication between devices using different protocols, a bridging device or gateway (D) is typically required to translate between protocol types.
Other options are incorrect because:

(A) Ethernet allows multiple hosts to communicate simultaneously.
(B) Different protocols can coexist on the same physical infrastructure using VLANs or other segmentation.
(C) Networks can and should be segmented into VLANs for security and performance.
GICSP covers these considerations in the ICS Security Architecture domain emphasizing protocol interoperability and network design.

NEW QUESTION # 32
What is a benefit of log aggregation?

- A. Reduces system load on logging devices
- B. Eliminates the need for baselining normal log activity
- C. Simplifies initial setup of logging in the environment
- D. Assists in analysis of log data from multiple sources

Answer: D

Explanation:
Log aggregation involves collecting log data from multiple devices and systems into a centralized repository.
This provides a holistic view of the environment and enables security teams to correlate events across disparate sources. The key benefit of log aggregation is that it:
Assists in analysis of log data from multiple sources (D) by providing a unified platform for searching, filtering, and correlating events, enabling quicker detection of security incidents and comprehensive forensic investigations.
While log aggregation can help improve management, it does not simplify initial setup (A), nor does it inherently reduce system load (B) because devices still generate logs locally. It also does not eliminate the need for baselining normal activity (C), which remains essential for detecting anomalies.
GICSP stresses centralized logging as a critical component of effective ICS security monitoring and incident response.

NEW QUESTION # 33
Which of the following technologies uses Secure Simple Pairing (SSP) to pair devices?

- A. Zigbee
- B. Bluetooth
- C. ISA100.11a
- D. WirelessHART

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Secure Simple Pairing (SSP) is a security feature used in Bluetooth technology (B) to provide improved authentication and encryption during device pairing.
Zigbee (A), WirelessHART (C), and ISA100.11a (D) use different security mechanisms adapted to industrial wireless environments and do not use SSP.
GICSP training covers Bluetooth SSP as part of wireless security protocols.

NEW QUESTION # 34

Which document should be updated to include incident handling while in the Planning phase of incident response?

- A. Disaster recovery plan
- B. Backup policy
- C. Vulnerability report
- D. Access control policy

Answer: A

Explanation:
The Disaster Recovery Plan (DRP) (A) is the document that should incorporate incident handling procedures during the planning phase. It details how to respond to and recover from incidents to restore normal operations.
Access control policy (B) governs permissions.
Backup policy (C) describes data backup processes but not incident handling.
Vulnerability report (D) is an assessment document, not a procedural plan.
GICSP underscores integrating incident response within disaster recovery planning to ensure comprehensive preparedness.

NEW QUESTION # 35
An attacker writes a program that enters a large number of characters into the password field of a website, followed by a command. The website gave him administrative access, even though he did not use a valid username or password.
What is the name of this attack?

- A. Man-in-the-Middle
- B. Buffer overflow
- C. Cross-site scripting
- D. Fuzzing

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
This is a classic description of a buffer overflow attack (B), where an attacker inputs excessive data into a field to overwrite memory and inject commands, potentially gaining unauthorized access.
(A) Man-in-the-Middle intercepts communications but doesn't involve input fields directly.
(C) Cross-site scripting involves injecting malicious scripts into web pages viewed by other users.
(D) Fuzzing is a testing technique, not an attack that grants access.
GICSP highlights buffer overflows as a critical vulnerability affecting ICS software and web interfaces.
