

GH-100最新関連参考書、GH-100試験概要

2026年MogiExamの最新GH-100 PDFダンプおよびGH-100試験エンジンの無料共有: <https://drive.google.com/open?id=1JoVf7FGoBO0VDjILWuoe-Y7t9YZZX4L>

GH-100学習ガイドには、PDF、ソフトウェア/PC、およびアプリ/オンラインの3つのモードがあります。分散した時間を使用して、自宅にいるのか、会社にいるのか、外出中にいるのかを知ることができます。同時に、GH-100学習テストの内容は、暦年の試験シラバスの内容に従って専門家によって慎重にMicrosoft編集されます。GH-100学習教材を使用すると、GH-100テストを受ける前に練習するのに20〜30時間しかかからず、98%〜100%の高いGitHub Administration合格率が得られます。

Microsoft GH-100 認定試験の出題範囲:

トピック	出題範囲
トピック 1	• Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.
トピック 2	• Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.
トピック 3	• Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.
トピック 4	• Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI • CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.

GH-100試験概要 & GH-100オンライン試験

MogiExamテストトレントを学習し、試験の準備をするのに20~30時間しかかかりません。GH-100試験問題を購入した後、GH-100試験トレントを学習し、主に仕事、家庭生活、学習に専念するために数時間を費やすだけです。GH-100試験問題の回答と質問は入念に選択され、試験の焦点をつかむため、試験の学習と準備に多くの時間を節約できます。合格率は98%以上と高いため、GH-100ガイドトレントを購入することで安心できます。

Microsoft GitHub Administration 認定 GH-100 試験問題 (Q25-Q30):

質問 # 25

Which of the following actions can a user with Write permissions perform in a GitHub repository?

- A. Manage repository settings, such as labels and GitHub Pages.
- B. Delete the repository.
- C. Configure branch protection rules.
- D. Push code to non-protected branches.

正解: D

解説:

Users granted Write permission can push commits to non-protected branches, allowing them to update code without needing administrative rights.

質問 # 26

What is a key characteristic of GitHub Enterprise Server (GHES) compared to GitHub Enterprise Cloud (GHEC)?

- A. GHES users cannot integrate with external identity providers for authentication.
- B. GHES is hosted by GitHub and offers automatic scaling, while GHEC requires self-hosting.
- C. GHES allows enterprises to have complete control over their hosting environment, including data storage and network security policies.
- D. GHEC offers data residency options in regions that GHES does not support.

正解: C

解説:

GitHub Enterprise Server is a self-hosted product you install and manage on your own infrastructure - giving you full control over data storage, network security policies, and the underlying environment.

質問 # 27

You are an administrator and need to enforce a policy on forking private and internal repositories. Which options are available for configuring the policy at the enterprise level? (Each answer presents a complete solution. Choose three.)

- A. Allow specific people or teams to fork private and internal repositories.
- B. Disallow repository owners from administering the setting at the repository level.
- C. Allow organization owners to administer the setting at the organization level.
- D. Disallow forking of private and internal repositories.
- E. Allow people who have access to private and internal repositories to fork these repositories.

正解: C、D、E

解説:

You can configure the enterprise policy to allow organization owners to administer the forking setting at the organization level, giving them control over how repos fork within their orgs.

You can choose to allow any user who already has access to a private or internal repo to fork it.

You can also set the policy to never allow forking of private or internal repositories across all organizations.

質問 # 28

You are planning GitHub account management for a healthcare organization with strict compliance requirements. Which THREE of the following statements accurately describe GitHub Enterprise Managed Users (EMU) accounts? (Choose three.)

- A. EMU accounts can be used for both personal and enterprise repositories.
- B. EMU accounts are managed through an identity provider such as Azure AD.
- C. EMU accounts are owned by the organization and cannot be unlinked.
- D. EMU accounts restrict users to enterprise-related activities only
- E. EMU accounts allow users to create and manage their own credentials.
- F. EMU accounts are created and managed by individual users.

正解: B、C、D

解説:

Enterprise Managed User accounts are provisioned and authenticated exclusively through your identity provider (for example, AzureAD), so the IdP handles their creation, attribute updates, and deprovisioning.

Managed user accounts cannot create public content or interact with repositories outside your enterprise; they're confined to private and internal repos within the enterprise.

EMU accounts are owned and controlled by the enterprise (via the IdP) and cannot be converted into or unlinked as personal accounts outside that enterprise.

質問 # 29

Which feature is unique to self-hosted runners?

- A. Dynamic scaling
- B. Execute scripts before and after a job
- C. GPU support
- D. Automatic updates to the operating system

正解: B

解説:

Self-hosted runners support custom pre- and post-job scripts via runner hooks, letting you run arbitrary scripts before a job starts and after it finishes - capabilities not available on GitHub-hosted runners.

質問 # 30
