Do you want to get more respects from other people? Do you long to become a powerful people? Our C_S4CPB_2502 exam torrent is compiled by professional experts that keep pace with contemporary talent development and makes every learner fit in the needs of the society. If you choose our C_S4CPB_2502 Study Materials, you will pass C_S4CPB_2502 exam successful in a short time. There is no doubt that our C_S4CPB_2502 exam question can be your first choice for your relevant knowledge accumulation and ability enhancement.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q44-Q49):

NEW QUESTION # 44

What are some characteristics of the SAP S/4HANA Migration Cockpit? Note: There are 2 correct answers to this question.

- A. Mapping source values to SAP S/4HANA target values
- B. Guidance and simulation of the migration process
- C. Extensibility using the Legacy System Migration Workbench
- D. Combining the local and remote schema approaches into one migration project

Answer: A,B

Explanation:

The SAP S/4HANA Migration Cockpit is a tool that facilitates the transfer of business data from a source system to SAP S/4HANA. It uses migration objects to identify and transfer the relevant data for a specific business object. The SAP S/4HANA Migration Cockpit has the following characteristics1:

- * It allows mapping source values to SAP S/4HANA target values, as well as converting values that are migrated from source fields to target fields. This ensures data consistency and quality in the target system.
- * It provides guidance and simulation of the migration process, as well as error handling and monitoring. This helps to reduce the complexity and risk of data migration, and to ensure a smooth and successful data transfer.
- * It does not support extensibility using the Legacy System Migration Workbench (LSMW), which is a tool for data migration from legacy systems to SAP systems. The SAP S/4HANA Migration Cockpit has its own extensibility framework, the SAP S/4HANA Migration Object Modeler, which allows creating and enhancing migration objects2.
- * It does not combine the local and remote schema approaches into one migration project. The SAP S/4HANA Migration Cockpit offers three options for transferring data to SAP S/4HANA: using files, using staging tables, or using direct transfer from an SAP system1. Each option requires a separate migration project and has its own advantages and limitations3.

NEW QUESTION # 45

Where are the manual test cases created for customer User Acceptance Testing?

- A. SAP Solution Manager
- B. SAP Signavio Process Navigator
- C. SAP Cloud ALM
- D. Test Automation Tool

Answer: C

Explanation:

Manual test cases for customer User Acceptance Testing are created in SAP Cloud ALM, a cloud-based application lifecycle management solution that supports SAP S/4HANA Cloud Public Edition implementations. SAP Cloud ALM provides test management apps that allow consultants to document and track all testing activities for both manual and automated test cases in one location. Manual test cases are created in the Test Preparation app based on the finalized solution scope (business processes) and assigned to test plans in the Test Plans app. SAP Cloud ALM also integrates with the SAP S/4HANA Cloud test system and third-party test providers to execute and monitor automated test cases. NEW QUESTION # 46

Which of the following are examples of indirect digital access? Note: There are 2 correct answers to this question.

- A. A Defect document created through an industry application
- B. An unattended bot in SAP Build Process Automation
- C. A Production Order created through a non-SAP front-end
- D. A Time Sheet Record from a 3rd party application

Answer: A,D

Explanation:

Indirect digital access occurs when humans, devices, or systems use the digital core indirectly through non- SAP intermediary software, such as a non-SAP front end, a custom-solution, or any other non-SAP application¹. Indirect digital access is measured by the number of documents created, updated, or deleted in the SAP system as a result of the indirect use². Examples of indirect digital access include:

- * A Defect document created through an industry application: This is an example of indirect digital access because the industry application is a non-SAP software that triggers the creation of a document in the SAP system
- * A Time Sheet Record from a 3rd party application: This is also an example of indirect digital access because the 3rd party application is a non-SAP software that triggers the creation of a document in the SAP system
- * An unattended bot in SAP Build Process Automation: This is not an example of indirect digital access because the bot is using SAP software to access the SAP system directly, not through a non-SAP intermediary software.
- * A Production Order created through a non-SAP front-end: This is not an example of indirect digital access because the production order is not a document type that is counted for indirect digital access. The document types that are counted are: Sales Order, Invoice, Purchase Order, Service and Maintenance Document, Manufacturing Document, Quality Management Document, Time Sheet, Financial Document, and Material Document². NEW QUESTION # 47

Which of the following is SAP's recommended Human Capital Management system (HCM)?

- A. SAP Fieldglass
- B. SAP Concur
- C. SAP Ariba
- D. SAP SuccessFactors

Answer: D

Explanation:

SAP SuccessFactors is SAP's recommended Human Capital Management system (HCM) because it provides innovative and cloud-based solutions to address the critical workforce transformation needs of organizations.

SAP SuccessFactors supports the next evolution of HCM, which is human experience management (HXM), by putting people at the center of everything and creating AI-powered experiences that drive real competitive advantage. SAP SuccessFactors also integrates with SAP S/4HANA Cloud and other SAP solutions to enable a seamless and connected business process across the enterprise. NEW QUESTION # 48

In SAP Central Business Configuration, which activities can you perform in the Product-Specific Configuration Phase? Note: There are 3 correct answers to this question.

- A. Create new scope items.
- B. Add blocking reasons for billing.
- C. Modify building blocks.
- D. Add new sales organizations.
- E. Change approval thresholds.

Answer: B,D,E

Explanation:

In the Product-Specific Configuration Phase within SAP Central Business Configuration, several key activities can be performed to tailor the SAP S/4HANA Cloud system to meet specific business needs:

* Add new sales organizations: This activity involves setting up new sales organizations within the system, defining the structure of the sales department, and aligning it with the company's sales strategies and territories. This setup is crucial for managing sales processes, customer relationships, and sales reporting.

* Change approval thresholds: Modifying approval thresholds is an essential configuration activity that adjusts the approval limits for various transactions, ensuring that the approval process aligns with the company's internal control and governance policies. This can involve setting different thresholds for purchase orders, expense approvals, and other financial transactions.

* Add blocking reasons for billing: This configuration activity allows the company to define specific reasons for blocking billing documents, ensuring that billing does not proceed under certain conditions until the issues are resolved. This is critical for maintaining accurate and compliant billing processes.

These activities are part of the detailed configuration work that tailors the SAP S/4HANA Cloud system to the specific operational needs of the business, ensuring that the software supports the company's unique processes and policies.
