Salesforce Plat-Arch-201 Exam | Plat-Arch-201 Certification Cost - Useful Tips & Questions for your Plat-Arch-201 Learning

Generally speaking, Salesforce certification has become one of the most authoritative voices speaking to us today. Let us make our life easier by learning to choose the proper Plat-Arch-201 test answers, pass the Plat-Arch-201 exam, obtain the certification, and be the master of your own life, not its slave. Our Plat-Arch-201 Exam Questions are exactly what you are looking for. With three different versions of Plat-Arch-201 exam study materials are shown on our website, so you will be glad to know you have so many different ways to study.

Salesforce Certified Platform Data Architect Sample Questions (Q171-Q176):

NEW QUESTION # 171

Universal Containers (UC) has multi-level account hierarchies that represent departments within their major Accounts. Users are creating duplicate Contacts across multiple departments. UC wants to clean the data so as to have a single Contact across departments. What two solutions should UC implement to cleanse their data? Choose 2 answer

- A. Use Data.com to standardize Contact address information to help identify duplicates.
- B. Make use of the Merge Contacts feature of Salesforce to merge duplicates for an Account.

- C. Use Workflow rules to standardize Contact information to identify and prevent duplicates.
- **D. Make use of a third-party tool to help merge duplicate Contacts across Accounts.**

Answer: A,D

Explanation:

Making use of a third-party tool to help merge duplicate Contacts across Accounts and using Data.com to standardize Contact address information to help identify duplicates are two solutions that UC should implement to cleanse their data and have a single Contact across departments. A third-party tool, such as an app from the AppExchange, can provide advanced features and capabilities for finding and merging duplicate Contacts across different Accounts, based on various criteria and rules. Data.com can provide address verification and standardization services that can enhance the quality and consistency of Contact address information and make it easier to identify duplicates. The other options are not feasible or effective for cleansing the data, as they would either not work across different Accounts, not address the root cause of duplication, or not provide sufficient functionality for merging duplicates

NEW QUESTION # 172

Universal Containers (UC) has an Application custom object, which has tens of millions of records created in the past 5 years. UC needs the last 5 years of data to exist in Salesforce at all times for reporting and queries. UC is currently encountering performance issues when reporting and running queries on this Object using date ranges as filters. Which two options can be used to improve report performance?

- A. Run multiple reports to get different pieces of the data and combine them.
- **B. Add custom indexes to the Date fields used for filtering the report.**
- **C. Ask support to create a skinny table for Application with the necessary reporting fields.**
- D. Add custom indexes to all fields on Application without a standard index.

Answer: B,C

Explanation:

Ask support to create a skinny table for Application with the necessary reporting fields. This is an option that can improve report performance by creating a custom table that contains frequently used fields and copies their values from standard or custom objects. Skinny tables are kept in sync with their source tables and are used in place of them for reports and queries. Add custom indexes to the Date fields used for filtering the report. This is another option that can improve report performance by creating custom indexes on fields that are often used as filters or join conditions in reports and queries. Custom indexes can speed up data retrieval and reduce query execution time

NEW QUESTION # 173

Based on government regulations, a Salesforce customer plans to implement the following in Salesforce for compliance:

- Access to customer information based on record ownership
- Ability for customers to request removal of their information from Salesforce
- Prevent users from accessing Salesforce from outside company network (virtual private network, or VPN)

What should a data architect recommend to address these requirements?

- A. Contact Salesforce support to restrict access only with VPN and other requirements
- B. Implement Salesforce shield with Event Monitoring to address the requirement.
- C. Allow users access to Salesforce through a custom web application hosted within VPN.
- **D. Implement IP restrictions, sharing settings, and custom Apex to support customer requests.**

Answer: D

Explanation:

IP restrictions can be used to prevent users from accessing Salesforce from outside the company network or VPN. According to this article, sharing settings can be used to control access to customer information based on record ownership. According to this article, custom Apex can be used to support customer requests for removal of their information from Salesforce.

NEW QUESTION # 174

Universal Containers has a custom object with millions of rows of data. When executing SOQL queries, which three options prevent a query from being selective? (Choose three.)

- A. Using a custom index on a deterministic formula field.
- B. Using NOT and != operators.
- C. Performing large loads and deletions.
- D. Using trailing % wildcards.
- E. Using leading % wildcards.

Answer: B,C,E

Explanation:

Using leading % wildcards, performing large loads and deletions, and using NOT and != operators are three options that prevent a query from being selective. These options can cause the query to scan a large number of records or indexes, which can negatively impact the performance and scalability of the query. Using a custom index on a deterministic formula field, on the other hand, can improve the query selectivity by allowing the query to use the index instead of scanning all the records.

NEW QUESTION # 175

Universal Containers (UC) has several custom Visualforce applications have been developed in which users are able to edit Opportunity records. UC struggles with data completeness on their Opportunity records and has decided to make certain fields required that have not been in the past. The newly required fields are dependent on the Stage of the Opportunity, such that certain fields are only required once an Opportunity advances to later stages. There are two fields. What is the simplest approach to handle this new requirement?

- A. Update these Opportunity field definitions in Setup to be required.
- B. Update the Opportunity page layout to mark these fields as required.
- C. Use a validation rule for each field that takes the Stage into consideration.
- D. Write an Apex trigger that checks each field when records are saved.

Answer: C

Explanation:

Using a validation rule for each field that takes the Stage into consideration is the simplest approach to handle this new requirement. A validation rule can enforce the field requirements based on the logic and criteria that you define, and display an error message when users try to save a record that does not meet the requirements. Updating the Opportunity page layout to mark these fields as required will not work because page layouts do not support conditional field requirements. Updating these Opportunity field definitions in Setup to be required will not work because it will apply to all stages and records. Writing an Apex trigger that checks each field when records are saved is not the simplest approach because it requires coding and testing.

NEW QUESTION # 176

.....

we can give you 100% pass rate guarantee. Plat-Arch-201 practice quiz is equipped with a simulated examination system with timing function, allowing you to examine your Plat-Arch-201 learning results at any time, keep checking for defects, and improve your strength. Besides, during the period of using Plat-Arch-201 learning guide, we also provide you with 24 hours of free online services, which help to solve any problem for you at any time and sometimes mean a lot to our customers.
