

# Associate-Cloud-Engineer Latest Test Dumps, Exam Associate-Cloud-Engineer Topic

BONUS!!! Download part of Getcertkey Associate-Cloud-Engineer dumps for free: [https://drive.google.com/open?id=1hTCBYmre0t24EdS4\\_fRzre7VasGMiah6](https://drive.google.com/open?id=1hTCBYmre0t24EdS4_fRzre7VasGMiah6)

If you want a relevant and precise content that imparts you the most updated, relevant and practical knowledge on all the key topics of the Google Certification exam, no other study material meets these demands so perfectly as does Getcertkey's study guides. The Associate-Cloud-Engineer questions and answers in these guides have been prepared by the best professionals who have deep exposure of the certification exams and the exam takers needs. The result is that Associate-Cloud-Engineer Study Guides are liked by so many ambitious professionals who give them first priority for their exams. The astonishing success rate of Associate-Cloud-Engineer clients is enough to prove the quality and benefit of the study questions of Associate-Cloud-Engineer.

The Google Associate Cloud Engineer exam targets software engineers who would like to dabble into the Google Cloud. So, you need to be capable of using the command-line interfaces and Google Cloud Console to handle core platform-based tasks. These mostly include monitoring operations and managing enterprise solutions to maintain deployed applications. In addition, after successful writing of the test, candidates obtain the appropriate Google Cloud certification.

## Deploying & Implementing Cloud Solutions

- Deploy and implement networking resources: this will measure your ability to launch Compute Engine instances using custom network configuration; create egress and ingress firewall rule or VPC; create VPNs between the external network and Google VPC with Cloud VPN; create the load balancer to allocate the application network traffic for apps;
- Deploy and implement data solutions: the applicants should be able to initialize data systems with Google products and load data;
- Deploy an application infrastructure with Cloud Deployment Manager with a focus on the development and launch of Deployment Manager templates.
- Deploy and implement Google Kubernetes Engine Resources: this domain includes skills in deploying Google Kubernetes Engine cluster, container application to Google Kubernetes Engine with pods, and configuring Google Kubernetes Engine Application logging and monitoring;
- Deploy and implement compute engine resources: the skills required for this area include launching compute instances with Cloud SDK and Cloud Console; creating auto-scaled managed instance groups with instance templates; uploading/generating custom SSH keys for instances; configuring virtual machines or Stackdriver logging and monitoring. It also requires that the

- students can assess compute quotas and request for increases; install a Stackdriver Agent for logging and monitoring;
- Deploy and implement App Engine, Cloud Functions, and Cloud Run resources: the learners will be required to demonstrate their skills in the deployment of applications, traffic splitting, updating scaling configuration, as well as deployment of applications that accept Google Cloud events;

## Exam Associate-Cloud-Engineer Topic - Associate-Cloud-Engineer Test Duration

All contents of Associate-Cloud-Engineer training prep are made by elites in this area rather than being fudged by laymen. Let along the reasonable prices of our Associate-Cloud-Engineer exam materials which attracted tens of thousands of exam candidates mesmerized by their efficiency by proficient helpers of our company. Any difficult posers will be solved by our Associate-Cloud-Engineer Quiz guide. And we have free demos of our Associate-Cloud-Engineer study braindumps for you to try before purchase.

## Google Associate Cloud Engineer Exam Sample Questions (Q61-Q66):

### NEW QUESTION # 61

A colleague handed over a Google Cloud Platform project for you to maintain. As part of a security checkup, you want to review who has been granted the Project Owner role. What should you do?

- A. In the console, validate which SSH keys have been stored as project-wide keys.
- B. Enable Audit Logs on the IAM & admin page for all resources, and validate the results.
- C. Navigate to Identity-Aware Proxy and check the permissions for these resources.
- D. Use the command `gcloud projects get-iam-policy` to view the current role assignments.

**Answer: D**

Explanation:

A simple approach would be to use the command flags available when listing all the IAM policy for a given project. For instance, the following command: ``gcloud projects get-iam-policy $PROJECT_ID --flatten="bindings[].members" --format="table(bindings.members)" --filter="bindings.role:roles/owner"` outputs all the users and service accounts associated with the role 'roles/owner' in the project in question.  
<https://groups.google.com/g/google-cloud-dev/c/Z6sZs7TvygQ?pli=1>

### NEW QUESTION # 62

You are analyzing Google Cloud Platform service costs from three separate projects. You want to use this information to create service cost estimates by service type, daily and monthly, for the next six months using standard query syntax. What should you do?

- A. Export your bill to a Cloud Storage bucket, and then import into Google Sheets for analysis.
- B. Export your bill to a Cloud Storage bucket, and then import into Cloud Bigtable for analysis.
- C. Export your bill to a BigQuery dataset, and then write time window-based SQL queries for analysis.
- D. Export your transactions to a local file, and perform analysis with a desktop tool.

**Answer: C**

Explanation:

Explanation

"...we recommend that you enable Cloud Billing data export to BigQuery at the same time that you create a Cloud Billing account."  
<https://cloud.google.com/billing/docs/how-to/export-data-bigquery>  
<https://medium.com/google-cloud/analyzing-google-cloud-billing-data-with-big-query-30bae1c2aae4>

### NEW QUESTION # 63

Your organization uses Active Directory (AD) to manage user identities. Each user uses this identity for federated access to various on-premises systems. Your security team has adopted a policy that requires users to log into Google Cloud with their AD identity instead of their own login.

You want to follow the Google-recommended practices to implement this policy.

What should you do?

- A. Sync identities with 3rd party LDAP sync, and then copy passwords to allow simplified login with the same credentials
- B. Sync identities with Cloud Directory Sync, and then copy passwords to allow simplified login with the same credentials.
- C. Sync Identities in the Google Admin console, and then enable Oauth for single sign-on
- **D. Sync Identities with Cloud Directory Sync, and then enable SAML for single sign-on**

**Answer: D**

#### NEW QUESTION # 64

You want to configure autohealing for network load balancing for a group of Compute Engine instances that run in multiple zones, using the fewest possible steps. You need to configure re-creation of VMs if they are unresponsive after 3 attempts of 10 seconds each. What should you do?

- A. Create a managed instance group. Set the Autohealing health check to healthy (HTTP)
- **B. Create a managed instance group. Verify that the autoscaling setting is on.**
- C. Create an HTTP load balancer with a backend configuration that references an existing instance group. Define a balancing mode and set the maximum RPS to 10.
- D. Create an HTTP load balancer with a backend configuration that references an existing instance group. Set the health check to healthy (HTTP)

**Answer: B**

#### NEW QUESTION # 65

Your company wants to standardize the creation and management of multiple Google Cloud resources using Infrastructure as Code. You want to minimize the amount of repetitive code needed to manage the environment. What should you do?

- A. Use curl in a terminal to send a REST request to the relevant Google API for each individual resource.
- B. Use the Cloud Console interface to provision and manage all related resources
- C. Create a bash script that contains all requirement steps as gcloud commands
- **D. Develop templates for the environment using Cloud Deployment Manager**

**Answer: D**

Explanation:

You can use Google Cloud Deployment Manager to create a set of Google Cloud resources and manage them as a unit, called a deployment. For example, if your team's development environment needs two virtual machines (VMs) and a BigQuery database, you can define these resources in a configuration file, and use Deployment Manager to create, change, or delete these resources. You can make the configuration file part of your team's code repository, so that anyone can create the same environment with consistent results.

#### NEW QUESTION # 66

.....

The page of our Associate-Cloud-Engineer simulating materials provides demo which are sample questions. The purpose of providing demo is to let customers understand our part of the topic and what is the form of our study materials when it is opened? In our minds, these two things are that customers who care about the Associate-Cloud-Engineer Exam may be concerned about most. We will give you our software which is a clickable website that you can visit the product page. Red box marked in our Associate-Cloud-Engineer exam practice is demo; you can download PDF version for free, and you can click all three formats to see.
