Valid Salesforce Plat-UX-101 Test Preparation & Test Plat-UX-101 Pdf

Are you staying up for the Plat-UX-101 exam day and night? Do you have no free time to contact with your friends and families because of preparing for the exam? Are you tired of preparing for different kinds of exams? If your answer is yes, please buy our Plat-UX-101 Exam Questions, which is equipped with a high quality. We can make sure that our Plat-UX-101 study materials have the ability to help you solve your problem, and you will not be troubled by these questions above.

Salesforce Certified Platform User Experience Designer Sample Questions (Q43-Q48):

NEW QUESTION # 43

Cloud Kicks is launching a new Salesforce org and wants to test its levels of accessibility, including keyboard navigation. Which detail could be verified by testing keyboard navigation for accessibility?

- A. Tabbing order is logical.
- B. Keyboard actions provide audio feedback.
- C. Actionable items are highlighted in a specific color.

Answer: A

Explanation:

Keyboard navigation is a way of interacting with a web application using only the keyboard, without a mouse or a touch screen. Keyboard navigation is essential for users who have visual impairments, motor disabilities, or other accessibility needs. Keyboard navigation also benefits users who prefer to use the keyboard for efficiency or convenience. One of the aspects of keyboard navigation that can be tested for accessibility is the tabbing order, which is the order in which elements on a page receive focus when the user presses the Tab key. The tabbing order should be logical, meaning that it follows the natural reading order of the page and the expected user workflow. A logical tabbing order helps users navigate the page easily and intuitively, without skipping or repeating elements. A logical tabbing order also helps screen readers announce the elements in a meaningful sequence. Therefore, testing the tabbing order for logic is a way of verifying keyboard navigation for accessibility. The other options are not related to keyboard navigation. Keyboard actions do not provide audio feedback by default, although some screen readers may have this feature. Actionable items are not highlighted in a specific color, although they may have a visible focus indicator, such as a border or an outline, to show which element has focus. The color of the focus indicator is not a factor for keyboard navigation, as long as it is distinguishable from the background. Keyboard Shortcuts, Use Lightning Experience with a Screen Reader, Accessibility in LWR Sites

NEW QUESTION # 44

Cloud Kicks wants to modify one of its custom Lightning Web Components so that its administrators can change the look and feel depending on what type of Lightning page is used in. Which feature should be recommended?

- A. App Builder styling property
- B. SLDS utility classes
- C. CSS loaded as a static resource
- D. Styling hooks

Answer: A

Explanation:

An App Builder styling property is a feature that allows a Lightning web component to expose CSS properties that can be set by an administrator in the Lightning App Builder. This way, the administrator can customize the look and feel of the component depending on the context and use case. For example, a component can have a styling property for the background color, the font size, or the border radius. The administrator can then change these values in the App Builder without modifying the code of the component. Reference: [Create App Builder Styling Properties]

NEW QUESTION # 45

A UX Design team is doing a review of a new Lightning Web Component (IWC). They are following the Salesforce Lightning Design System (SLDS) block, element, modifier (BEM) naming conventions. Which class does NOT follow this convention?

- A. .slds-avatar_circle
- B. .slds-box
- C. .slds--size-l-of-2

Answer: C

Explanation:

The SLDS BEM naming convention consists of three parts: block, element, and modifier. A block is a standalone component that can be reused across projects, such as a button, a card, or a modal. An element is a part of a block that has no standalone meaning, such as a label, an icon, or a header. A modifier is a flag that changes the appearance or behavior of a block or an element, such as size, color, or state. The modifier is separated from the block or element by two hyphens (-), and can have a value separated by a single hyphen (-), such as .slds-button-brand or .slds-button-neutral. The class .slds-size-l-of-2 does not follow this convention because it has no block or element name before the modifier. It should be something like .slds-grid-size-l-of-2 or .slds-col-size-l-of-

NEW QUESTION # 46

Cloud Kicks (CK) has an Unlimited Edition Salesforce org. CK's UX Designer has identified that dynamic dashboards could be a useful tool to improve org usability and experience.

How many different dynamic dashboards could they create?

- A. Unlimited
- B. Up to 3
- C. Up to 20
- **D. Up to 10**

Answer: D

Explanation:

According to the Salesforce documentation, the number of dynamic dashboards that an organization can have depends on the edition of Salesforce that they are using. A dynamic dashboard is a dashboard that runs using the security settings of the user viewing the dashboard, so that each user sees the data according to their own access level. Dynamic dashboards are useful for sharing one common set of dashboard components to users with different levels of access, without having to create separate dashboards for each user or role. The documentation states that:

Enterprise Edition can use up to 5 dynamic dashboards

Unlimited and Performance Edition can use up to 10 dynamic dashboards

Developer Edition can use up to 3 dynamic dashboards

Additional dynamic dashboards may be available for purchase

Therefore, since Cloud Kicks has an Unlimited Edition Salesforce org, they can create up to 10 different dynamic dashboards | Taking Advantage of Dynamic Dashboards | Salesforce Developers

NEW QUESTION # 47

When designing a custom component that includes this clickable icon in a Lookup field:

What should be used as the alternative (alt) text?

- **A. Search button**
- B. Search
- C. Image of a search button
- D. Image of a magnifying glass

Answer: A

Explanation:

The alternative (alt) text is a short block of text that describes the content and function of an image or other non-text element on a web page. The alt text is read aloud by screen readers and other assistive technologies to provide access to people who cannot see the image. The alt text also helps with search engine optimization and displays on the page if the image fails to load.

When designing a custom component that includes a clickable icon in a Lookup field, the alt text should be concise, descriptive, and meaningful. The alt text should convey the purpose and action of the icon, rather than its appearance or format. Therefore, the best option for the alt text of the icon is "Search button", as it describes what the icon does and how the user can interact with it. The other options are not suitable for the alt text, as they either include unnecessary words, such as "image of" or "photo of", or omit important information, such as "button". For example, the option "Image of a search button" is redundant, as the screen reader will already announce that the element is an image. The option "Search" is incomplete, as it does not indicate that the element is a button that can be clicked. The option "Image of a magnifying glass" is irrelevant, as it describes the appearance of the icon, rather than its function.

NEW QUESTION # 48

.....

As you know that the number of the questions and answers in the real Plat-UX-101 exam is fixed. So accordingly the information

should be collected for you. Our Plat-UX-101 study materials have done the right thing for you. However, we will never display all the information in order to make the content appear more. Our Plat-UX-101 learning guide just want to give you the most important information. This is why Plat-UX-101 actual exam allow you to take the exam in the shortest possible time.
