1Z0-947 Best Study Material | 1Z0-947 Current Exam Content

When we choose to find a good job, there is important to get the 1Z0-947 certification as you can. There is a fabulous product to prompt the efficiency--the 1Z0-947 exam prep, as far as concerned, it can bring you high quality learning platform to pass the variety of exams. Our product is elaborately composed with major questions and answers. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the 1Z0-947 Test Question. Then, you will have enough confidence to pass it.

Oracle GoldenGate 19c Implementation Professional Sample Questions (Q65-Q70):

NEW QUESTION # 65

What is the main advantage of using a data pump Extract?

- A. Trail retention at source for recovery
- B. Enables load balancing
- C. Faster row compression
- D. Secure REST access

Answer: A

Explanation:

It allows recovery if the network or target system fails by maintaining a local trail.

NEW QUESTION # 66

Which is an invalid combination for EVENTACTIONS with options?

- A. EVENTACTIONS (CHECKPOINT BEFORE, ABORT)
- B. EVENTACTIONS (CHECKPOINT BOTH, STOP)
- C. EVENTACTIONS (CHECKPOINT AFTER, ABORT)
- **D. EVENTACTIONS (CHECKPOINT BOTH, IGNORE)**

Answer: D

Explanation:

The combination CHECKPOINT BOTH with IGNORE is invalid because IGNORE tells Replicat to skip the transaction, while CHECKPOINT BOTH implies a complete apply and checkpoint - which contradicts the action of ignoring the transaction.

NEW QUESTION # 67

A Distribution Path sends the transaction of data from Extract to Replicat. How can you create a Distribution Path?

- A. From Cloud Shell with REST APIs
- B. In GGSCI with GoldenGate commands
- **C. From the Service Manager home page**
- D. At OS prompt with run preceding the GoldenGate commands

Answer: C

Explanation:

In Oracle GoldenGate Microservices Architecture, the Service Manager UI is the recommended and primary interface to create a Distribution Path using the Distribution Server. This method is officially documented and intended for simplified management.

NEW QUESTION # 68

You find that an Extract's recovery time increases. What caused it?

- **A. The difference between the start of the oldest open (uncommitted) transaction and current read position in the transaction log stored in the checkpoint file is large.**
- B. The oldest open (uncommitted) transaction is small.
- C. The current read position (RBA) is less than the oldest open (uncommitted) transaction position.
- D. There is no oldest open (uncommitted) transaction.

Answer: A

Explanation:

When the difference between the oldest open transaction's start and the current read position is large, Extract must scan more log data, increasing recovery time.

NEW QUESTION # 69

You need to manually patch Oracle GoldenGate source and targets. How should you proceed?

- A. Stop access to the source and target databases. Start applying the patch on the source. Stop the data pump and Replicat. Apply the patch on the target. Start the Oracle GoldenGate processes whenever you are ready to begin capturing user activity again.
- B. Stop access to the source and target databases. Allow Extract to finish capturing the transaction data that remains in the transaction log and stop Extract. Start applying the patch on the source. Wait until the data pump (if used) and Replicat are finished processing the data in their respective trails. Stop the data pump and Replicat. Apply the patch on the target. Start the Oracle GoldenGate processes whenever you are ready to begin capturing user activity again.
- **C. Stop access to the source. Allow Extract to finish capturing the transaction data that remains in the transaction log and stop Extract. Start applying the patch on the source. Wait until the data pump/Replicat are finished processing the data in their respective trails. Stop the data pump/Replicat. Apply the patch on the target. If the patches changed table defs, run DEFGGEN for the source tables to generate updated source defs, and then replace the old defs with the new ones in the existing source defs file on the target. Start GG processes when ready to begin capturing activity again.**

- D. Stop access to the source database. Allow Extract to finish capturing the transaction data that remains in the transaction log and stop Extract. Start applying the patch on the source and on the target. Start the Oracle GoldenGate processes whenever you are ready to begin capturing user activity again.

Answer: C

Explanation:

This is the only option that:

- * Waits for Extract to finish capturing remaining redo/transaction log data ☐
- * Waits for Data Pump and Replicat to reach EOF ☐
- * Properly stops components in sequence ☐
- * Accounts for definition file updates (DEFGEN) if metadata changes ☐

NEW QUESTION # 70

.....

Do you want to pass 1Z0-947 exam certification at your first attempt to attend 1Z0-947 test? With DumpsMaterials, we will meet all of your needs, and make you pass 1Z0-947 certification exam at one time in a limited time. Because DumpsMaterials have 1Z0-947 Exam Certification training materials, which are summarized by experienced IT experts with many years' practice, and is a combination of 1Z0-947 exam dumps and answers, you can't regret to choose DumpsMaterials.
