

Fantastic 1z1-076 Reliable Test Review by PassCollection

BONUS!!! Download part of PassCollection 1z1-076 dumps for free: https://drive.google.com/open?id=1WLoHfRpAq9YlQaF_qCiJ8OYUjVoKJ3UA

For candidates who are going to pay for 1z1-076 test materials online, they may care more about the money safety. We apply the international recognition third party for payment, and if you pay for 1z1-076 exam materials, we can ensure the safety of your money and account. Besides, the third party will also protect your interests. The pass rate for 1z1-076 testing materials is 98.75%, and we can guarantee you that you can pass the exam just one time. We are pass guarantee and money back guarantee if you fail to pass the exam, and the refund will be returned to your payment account.

Which one is your favorite way to prepare for the exam, PDF, online questions or using simulation of exam software? Fortunately, the three methods will be included in our 1z1-076 exam software provided by PassCollection, so you can download the free demo of the three version. Choosing the right method to have your exam preparation is an important step to obtain 1z1-076 Exam Certification. Certainly, we ensure that each version of 1z1-076 exam materials will be helpful and comprehensive.

1z1-076 training materials & 1z1-076 exam torrent & 1z1-076 dumps torrent

PassCollection Oracle 1z1-076 exam materials contain the complete unrestricted dump. So with it you can easily pass the exam. PassCollection Oracle 1z1-076 exam training materials is a good guidance. It is the best training materials. You can use the questions and answers of PassCollection Oracle 1z1-076 Exam Training materials to pass the exam.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 2	<ul style="list-style-type: none">Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 3	<ul style="list-style-type: none">Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.

Topic 4	<ul style="list-style-type: none"> Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 5	<ul style="list-style-type: none"> Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 6	<ul style="list-style-type: none"> Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.
Topic 7	<ul style="list-style-type: none"> Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.

Oracle Database 19c: Data Guard Administration Sample Questions (Q38-Q43):

NEW QUESTION # 38

Examine the Data Guard configuration:

```
DGMGRL> show configuration;
```

Configuration - Animals

Protection Mode: Max Availability

Databases:

dogs - Primary database sheep

- Physical standby database cats

- Physical standby database

Fast-Start Failover: DISABLED

Configuration Status: SUCCESS

An attempt to enable fast-start failover raises an error:

```
DGMGRL> enable fast_start failover;
```

Error: ORA-16693: requirements not met for enabling fast-start failover Failed.

Identify three possible reasons for this error.

- A. The LogxptModr property is set to async on Sheep while Sheep is the target standby database.
- B. The LogXptMode property is set to fastsync on Dogs.
- C. The LogXptMode property is set to FASTSYNC on Cats while Sheep is the target standby database.
- D. The LogXptMode property is set to async on Dogs.
- E. The fastStartFailoverTarget property is not set on Dogs.

Answer: A,D,E

Explanation:

When enabling fast-start failover, certain conditions must be met:

The fastStartFailoverTarget property is not set on Dogs (A): The primary database (Dogs) needs to have a fast-start failover target configured for the operation to succeed.

The LogXptMode property is set to ASYNC on Sheep while Sheep is the target standby database (B): Fast-start failover requires synchronous redo transport (SYNC or FASTSYNC) to ensure zero data loss, which is a prerequisite for enabling the feature.

The LogXptMode property is set to ASYNC on Dogs (D): Similar to the previous point, the primary database must be configured to use synchronous redo transport for the fast-start failover to be possible.

NEW QUESTION # 39

You are using Data Guard in conjunction with Global Database Services.

You have a Data Guard Broker configuration called Sales and a GDS pool called Prod.

Which three are true concerning the management of the broker configuration when using GDS?

- A. Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services.
- B. Adding a database to the Sales configuration with DGMGRL requires that the Sales configuration be disabled first. It must then be enabled after the new database is added to the configuration.
- C. DGMGRL may be used to add the Sales configuration to the Prod pool in gds.
- D. Adding a database to the Sales configuration with DGMGRL automatically adds the database to the Prod Pool.
- E. DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool.

Answer: A,C,E

Explanation:

In the context of Oracle Data Guard and Global Database Services (GDS):

* DGMGRL may be used to add the Sales configuration to the Prod pool in gds (A): Data Guard Broker's command-line interface DGMGRL can be utilized to manage configurations with GDS, allowing the addition of Data Guard Broker configurations to GDS pools.

* Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services (B): When a role change is executed using DGMGRL, GDS is automatically notified, and it then activates the services that are appropriate for the new database roles.

* DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool (C): DGMGRL provides the capability to manage individual databases within a broker configuration, including adding databases to a configuration that is already part of a GDS pool. NEW QUESTION # 40

Which two steps must be performed before running DUPLICATE TARGET DATABASE FOR STANDBY using RMAN?

- A. Create a standby control file.
- B. Transfer a copy of the password file from the primary host to the standby host.
- C. Configure Oracle Net connectivity between the primary host and the standby host.
- D. Create an SPFILE for the standby database.
- E. Run the nid utility to modify the DBID of the primary database.

Answer: B,C

NEW QUESTION # 41

You created two remote physical standby databases using SQL and RMAN.

The primary database is a four-instance RAC database and each physical standby database has two instances.

Roles-based services are used for client connectivity and have been defined in the Grid Infrastructure.

Consider these operational requirements:

- * The ability to manage multiple standby databases with a single tool
- * The simplification of switchovers, failovers, reinstatements, and conversions to and from snapshot standby databases
- * The automation of failovers to a specified target standby database

Which TWO tools can be used to fulfill these requirements?

- A. RMAN
- B. DGMGRL
- C. CRSCTL
- D. SQL*Plus
- E. GDCCTL
- F. SRVCTL
- G. Enterprise Manager Cloud Control

Answer: B,G

Explanation:

Enterprise Manager Cloud Control provides a graphical interface to manage multiple standby databases, simplify switchovers and failovers, and automate failover processes to a specified target standby database. It offers a comprehensive view and control over the Data Guard configuration, making complex operations more manageable.

DGMGRL is a command-line tool specifically designed for managing Data Guard configurations. It allows the administration of

multiple standby databases, simplifies the execution of switchovers and failovers, reinstatements, and conversions to and from snapshot standby databases, and supports the automation of failover processes to a specified standby database. Other options like RMAN, SQL*Plus, CRSCTL, SRVCTL, and GDCCTL do not provide the same level of integrated management functionality for Data Guard environments as Enterprise Manager Cloud Control and DGMGRL.

NEW QUESTION # 42

Examine the Data Guard configuration:

```
DGMGRL> show configuration;
```

Configuration - Animals

Protection Mode: MaxAvailability

Databases:

dogs - Primary database

sheep - Snapshot standby database

cats - Physical standby database

Fast-Start Failover: DISABLED

Configuration Status:

SUCCESS

You receive an error while attempting to raise the protection mode to Maximum Protection:

```
DGMGRL> edit configuration set protection mode as maxprotection;
```

Error: ORA-16627: operation disallowed since no standby databases would remain to support protection mode Failed.

Which is the minimum statement, or sequence of statements you must execute to enable successful raising of the protection mode to Maximum Protection?

- A. DGMGRL> edit database sheep set property LogXptMode=sync;
- B. DGMGRL> edit database cats set property LogXptMode=sync;
- C. DGMGRL> edit database dogs set property LogxptMode=sync;
- D. DGMGRL> edit database dogs set property LogXptMode=sync;
DGMGRL> edit database sheep set property LogxptMode=sync;
DGMGRL> edit database cats set property LogXptMode=sync;
- E. DGMGRL> edit database dogs set property LogxptMode=sync;
DGMGRL> edit database sheep set property LogxptMode=sync;
- F. DGMGRL> edit database dogs set property LogXptMode=sync;
DGMGRL> edit database cats set property LogXptMode=sync;

Answer: F

NEW QUESTION # 43

.....

Our 1z1-076 learning materials were developed based on this market demand. More and more people are aware of the importance of obtaining a certificate. There are more and more users of 1z1-076 practice guide. Our products can do so well, the most important thing is that the quality of 1z1-076 exam questions is very good, and can be continuously improved according to market demand. And you can look at the data on our website, the hot hit of our 1z1-076 training guide can prove how popular it is!
