### **Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q80-Q85):**

#### **NEW QUESTION # 80**

What does the deployment of a FortiGate instance in Azure typically protect?

Response:

- A. The entire network infrastructure
- B. Only outbound traffic
- C. Only the data at rest
- D. Application deployment scripts

**Answer: A**

#### **NEW QUESTION # 81**

How does autoscaling enhance HA for applications hosted in Azure?

Response:

- A. By adding or removing resources based on demand
- B. By automatically adjusting the bandwidth
- C. By encrypting data transfers
- D. By shifting traffic to underutilized servers

**Answer: A**

#### **NEW QUESTION # 82**

You deployed a FortiGate active-active with ELB/ILB solution using the template from Azure Marketplace.

What is the purpose of the inbound NAT rules configured in the external load balancer in this deployment?

- A. To forward the health probes to both FortiGate VMs
- B. To load balance the incoming traffic between both FortiGate VMs
- C. To filter inbound traffic before it reaches the FortiGate instances
- D. To allow administrative access to the FortiGate VMs

**Answer: D**

Explanation:

In an active-active FortiGate ELB/ILB deployment, the inbound NAT rules configured on the external load balancer are used to allow administrative access (e.g., HTTPS, SSH) to the individual FortiGate VMs. Since the public IP is associated with the load

balancer, NAT rules are required to map specific ports to backend FortiGate instances for management access.

### NEW QUESTION # 83

When you deploy a single FortiGate VM using the available template from the Azure Marketplace, several other resources are also created.

Which two resources, among others, are created during the process? (Choose two.)

- A. Two virtual NICs
- B. One new route table
- C. One NSG for each interface
- D. One VM Scale set

**Answer: A,C**

Explanation:

Two virtual NICs - The FortiGate Azure Marketplace template deploys the VM with at least two network interfaces: one for the external/public interface and one for the internal/private interface.

One NSG for each interface - The deployment creates separate Network Security Groups (NSGs) attached to each NIC to control inbound and outbound traffic as per Fortinet's best practices.

### NEW QUESTION # 84

What does configuring HA using FortiGate in Azure primarily safeguard against?

Response:

- A. SQL injection attacks
- B. Physical hardware failures
- C. Unauthorized data access
- D. Phishing attempts

**Answer: B**
