of Cloud-Digital-Leader Exam

Before you try to attend the Cloud-Digital-Leader practice exam, you need to look for best learning materials to easily understand the key points of Cloud-Digital-Leader exam prep. There are Cloud-Digital-Leader real questions available for our candidates with accurate answers and detailed explanations. We are ready to show you the most reliable Cloud-Digital-Leader PDF VCE and the current exam information for your preparation of the test.

Google Cloud Digital Leader Exam is a comprehensive exam that tests an individual's knowledge of Google Cloud technology and its applications. It consists of multiple-choice questions and is designed to evaluate the candidate's proficiency in various Google Cloud-related concepts. Cloud-Digital-Leader exam requires a deep understanding of Google Cloud's features, benefits, and use cases, and it aims to certify individuals as experts in Google Cloud technology. Passing Cloud-Digital-Leader Exam can provide candidates with a valuable credential that can help them advance their careers and achieve their professional goals.

Google Cloud Digital Leader Sample Questions (Q80-Q85):

NEW QUESTION # 80

You have deployed a new public web application that allows users to register and login with email ids, phone numbers, or user ids. You are seeing some unusual activity with user registrations and logins from a few IPs.

A large number of accounts were created very quickly. Logins are also happening quickly thereafter from these new accounts. Different parts of the application are being explored, all of which are putting a heavy load on the application. What could be a problem and how can you solve it?

- A. Automated testing tools might still be running and creating accounts. Use Identity-Aware Proxy to restrict the users to known users.
- **B. Bots are creating accounts and then using them. Use Google Cloud's Web App and API Protection (WAAP).**
- C. A hacker group has hired a bunch of people to create accounts and manually use the system. Use Cloud Asset Inventory to see if there have been changes in the inventory.
- D. Bots are creating accounts and then using them. Use Identity-Aware Proxy to restrict the users to known users.

Answer: B

Explanation:

Explanation

Bots attacking the application is the most likely scenario in this case. Using WAAP is the right protection plan: Anti-DDoS, anti-bot, WAF, and API protection help you protect against new and existing threats while helping you keep your apps and APIs compliant and continuously available.

NEW QUESTION # 81

An organization is deploying their servers to the cloud using the infrastructure as a service model.

In the shared responsibility model, what is the cloud provider responsible for?

- A. Security of the software
- **B. Physical security**
- C. Data access policies
- D. Security of the operating system

Answer: B

Explanation:

In the Infrastructure as a Service (IaaS) model under the shared responsibility model, the cloud provider (e.g., Google Cloud) is responsible for the physical security of the infrastructure, including data centers, hardware, and the physical environment. The customer is responsible for managing the operating system, applications, and data.

Option B: Physical security is correct because it describes the cloud provider's responsibility in securing the physical aspects of the infrastructure.

Google Cloud Shared Responsibility Model: Customer and Provider Responsibilities Google Cloud Security Overview: Physical Security Measures

NEW QUESTION # 82

An organization is hosting an application in Europe, and customers in Asia are reporting slow response times despite their fast internet connection.

What is the problem?

- A. Misconfigured application servers
- **B. Network latency**
- C. Network bandwidth
- D. Not enough application servers

Answer: B

NEW QUESTION # 83

Which of the followings are core components of Anthos?

- A. Multicluster & Configuration management
- B. Infrastructure, container, and cluster management
- **C. All of the above are correct.**
- D. Secure software supply chain

Answer: C

Explanation:

Table Description automatically generated

Core Anthos components	Google Cloud	On-premises	Multi-cloud	Attached clusters
Infrastructure, container, and cluster management	GKE Multi Cluster Ingress	Anthos clusters on VMware	Anthos clusters on AWS, Anthos clusters on Azure	
Multicluster management	Fleets, fleet-enabled components, and Connect	Fleets, fleet-enabled components, and Connect	Fleets, fleet-enabled components, and Connect	Fleets, fleet-enabled components, and Connect
Configuration management	Anthos Config Management	Anthos Config Management	Anthos Config Management	Anthos Config Management
Migration	Migrate for Anthos and GKE	Migrate for Anthos and GKE	Migrate for Anthos and GKE	
Service management	Anthos Service Mesh Anthos Service Mesh dashboards MeshCA certificate authority	Anthos Service Mesh Grafana and Kiali dashboards Istiod certificate authority	Anthos Service Mesh (AWS only)	Anthos Service Mesh
Serverless	Cloud Run for Anthos	Cloud Run for Anthos		
Secure software supply chain	Binary Authorization	Binary Authorization (preview)		
Logging and monitoring	Cloud Logging and Cloud Monitoring for system components	Cloud Logging and Cloud Monitoring for system components		
Marketplace	Kubernetes Applications in Cloud Marketplace	Kubernetes Applications in Cloud Marketplace		

NEW QUESTION # 84

A retail organization has moved all of their inventory data to a relational database in the cloud.

What functionality does a relational database offer?

- A. It rapidly analyzes large and multi-dimensional datasets
- **B. It stores transactional data which can then be accessed electronically**
- C. It stores large amounts of raw data in its original format
- D. It analyzes unstructured data which can then be accessed in multiple regions

Answer: B

Explanation:

Explanation

A relational database offers the functionality of storing transactional data, which can then be accessed electronically. Relational databases store structured data that can be organized in tables with defined relationships between them. This makes them well-suited for transactional data, such as inventory data, that needs to be accessed and updated frequently.
