眾所周知，Data-Architect認證在IT認證中有很大的影響力，近年來，該認證已經成為許多成功IT公司的“進門”標準。想快速通過認證考試，可以選擇我們的Salesforce Data-Architect考古題。選擇我們NewDumps網站，您不僅可以通過熱門的Data-Architect考試，而且還可以享受我們提供的一年免費更新服務。擁有Salesforce Data-Architect認證可以幫助在IT領域找工作的人獲得更好的就業機會，也將會為成功的IT事業做好鋪墊。

Salesforce數據架構師（Salesforce認證數據架構師）認證考試旨在為希望在Salesforce中設計和實施複雜數據解決方案的專業人士展示其專業知識。此認證非常適合具有數據架構背景並希望在Salesforce方面提升技能的個人。

Salesforce 資料架構師 (CDA) 認證是業界高度尊重的認證，它展示了候選人在Salesforce數據架構和管理方面的熟練程度。該認證獲得全球雇主的認可，對於任何想在Salesforce生態系統中推進職業生涯的人來說都是非常有意義的資產。CDA 認證也是高級認證，如應用架構師和系統架構師的先決條件。

Data-Architect信息資訊，Data-Architect學習筆記

NewDumps長年以來一直向大家提供關於IT認證考試相關的學習資料。Salesforce的Data-Architect題庫由世界各地的資深IT工程師組成的專業團隊制作完成，包含最新的考試試題，並附有全部正確的答案，幫助考生通過他們認為很難的Data-Architect考試。這樣可以節約考生的時間和金錢，大多數的考生都選擇這樣的方式來獲得Data-Architect認證，並節省了很多的時間和努力。您需要是在反復練習這份真題的基礎上，多思考，多總結，通過Data-Architect考試就沒有問題了。

最新的 Salesforce Application Architect Data-Architect 免費考試真題 (Q92-Q97):

問題 #92

Which API should a data architect use if exporting 1million records from Salesforce?

- A. SOAP API
- B. Streaming API
- C. REST API
- D. Bulk API

答案: D

解題說明:

Using Bulk API to export 1 million records from Salesforce is the best option. Bulk API is a RESTful API that allows you to perform asynchronous operations on large sets of data. You can use Bulk API to create, update, delete, or query millions of records in batches. Bulk API is optimized for performance and scalability, and it can handle complex data loading scenarios.

問題 #93

UC has a roll-up summary field on Account to calculate the count of contacts associated with an account. During the account load, SF is throwing an "Unable to lock a row" error. Which solution should a data architect recommend, to resolve the error?

- **A. Perform Batch job in serial mode and reduce batch size**
- B. Defer roll-up summary fields calculation during data migration.
- C. Leverage data loader platform API to load data.
- D. Perform Batch job in parallel mode and reduce Batch size

答案: A

解題說明:

The best solution to resolve the error of "Unable to lock a row" during the account load is to perform batch job in serial mode and reduce batch size. This is because roll-up summary fields are calculated synchronously when the parent record is updated, and asynchronously when the child record is updated. Therefore, updating many child records at once can cause locking issues on the parent record. To avoid this, it is recommended to use serial mode and smaller batch sizes when loading data using tools like Data Loader or Bulk API12.

Leverage data loader platform API to load data is not a good option because it does not specify the mode or batch size. Perform batch job in parallel mode and reduce batch size is not a good option because parallel mode can still cause locking issues even with smaller batches. Defer roll-up summary fields calculation during data migration is not a good option because it is not possible to defer or disable roll-up summary fields calculation

問題 #94

Universal Containers (UC) owns a complex Salesforce org with many Apex classes, triggers, and automated processes that will modify records if available. UC has identified that, in its current development state, UC runs change of encountering race condition on the same record.

What should a data architect recommend to guarantee that records are not being updated at the same time?

- A. Disable classes or triggers that have the potential to obtain the same record.
- **B. Embed the keywords FOR UPDATE after SOQL statements.**
- C. Refactor or optimize classes and trigger for maximum CPU performance.
- D. Migrate programmatic logic to processes and flows.

答案: B

問題 #95

Universal Containers is setting up an external Business Intelligence (BI) system and wants to extract 1,000,000 Contact records. What should be recommended to avoid timeouts during the export process?

- **A. Use GZIP compression to export the data.**
- B. Use the SOAP API to export data.
- C. Schedule a Batch Apex job to export the data.
- D. Utilize the Bulk API to export the data.

答案: A

解題說明:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for using various tools and techniques for data migration (for example, Data Loader, Bulk API)"1. This implies that option B is the correct way to extract large volumes of data from Salesforce. The Bulk API is designed to handle large-scale data operations and avoid timeouts. Option A is not correct because the SOAP API is not optimized for large data sets and may encounter limits. Option C is not correct because GZIP compression does not prevent timeouts, but rather reduces the size of the data transferred. Option D is not correct because

Batch Apex is used to process records asynchronously in Salesforce, not to export data to an external system.

問題 #96

UC is planning a massive SF implementation with large volumes of data. As part of the org's implementation, several roles, territories, groups, and sharing rules have been configured. The data architect has been tasked with loading all of the required data, including user data, in a timely manner.

What should a data architect do to minimize data load times due to system calculations?

- A. Enable granular locking to avoid "UNABLE_TO_LOCK_ROW" error.
- **B. Enable defer sharing calculations, and suspend sharing rule calculations**
- C. Leverage the Bulk API and concurrent processing with multiple batches
- D. Load the data through data loader, and turn on parallel processing

答案: B

解題說明:

The correct answer is A, enable defer sharing calculations, and suspend sharing rule calculations. Defer sharing calculations and suspend sharing rule calculations are features that allow you to temporarily disable the automatic recalculation of sharing rules when you load large volumes of data. This can improve the performance and speed of your data load process by avoiding unnecessary system calculations. Loading the data through data loader, leveraging the bulk API, or enabling granular locking are also options that can help with data load times, but they do not directly address the system calculations issue.
