BTW, DOWNLOAD part of TroytecDumps GH- 100 dumps from Cloud Storage: [https://drive.google.com/open?id=1bv8HIUnruPpNcNWQ\\_rdatl0YL3lf8Vx4](https://drive.google.com/open?id=1bv8HIUnruPpNcNWQ_rdatl0YL3lf8Vx4)

Passing the exam rests squarely on the knowledge of exam questions and exam skills. Our GH-100 training quiz has bountiful content that can fulfill your aims at the same time. We know high efficient GH-100 practice materials play crucial roles in your review. Our experts also collect with the newest contents and have been researching where the exam trend is heading and what it really want to examine you. By analyzing the syllabus and new trend, our GH-100 Practice Engine is totally in line with this exam for your reference. So grapple with this chance, our GH-100 practice materials will not let you down.

## Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Manage GitHub Packages: This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI</li><li>CD pipelines.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI</li><li>CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.</li></ul>

## GH-100 Brain Dumps | GH-100 Test Voucher

We try our best to provide the most efficient and intuitive learning methods to the learners and help them learn efficiently. Our GH-

100 exam reference provides the instances to the clients so as to they can understand them intuitively. Based on the consideration that there are the instances to our GH-100 test guide to concretely demonstrate the knowledge points. Through the stimulation of the Real GH-100 Exam the clients can have an understanding of the mastery degrees of our GH-100 exam practice question in practice. Thus our clients can understand the abstract concepts in an intuitive way.

## Microsoft GitHub Administration Sample Questions (Q20-Q25):

### NEW QUESTION # 20

What is the key benefit of using a GitHub security advisory within a repository?

- A. It automatically reverts commits that introduced the vulnerability.
- B. It flags all forks of the repository as vulnerable.
- C. It allows maintainers to privately disclose, discuss, and publish vulnerabilities.
- D. It prevents users from cloning the repository until issues are resolved.

**Answer: C**

Explanation:

GitHub security advisories let maintainers privately disclose, discuss fixes, and then publish vulnerabilities in a controlled manner within the repository.

### NEW QUESTION # 21

Which of the following correctly describes the difference between controlling actions at the enterprise level versus the organization level in GitHub?

- A. Enterprise policies configure mandatory settings for organizations.
- B. Enterprise policies and organization policies are independent, with organization policies taking precedence for repositories within the organization.
- C. Enterprise policies can block specific actions, while organization policies can only enable or disable actions entirely.
- D. Enterprise policies apply only to public repositories, while organization policies apply to public, internal, and private repositories.

**Answer: A**

Explanation:

Enterprise policies let you define and enforce mandatory settings across all member organizations - organization-level policies then operate within the options that the enterprise policy exposes.

### NEW QUESTION # 22

What is the first step when sensitive data is accidentally pushed to a public GitHub repository?

- A. Delete the repository
- B. Revoke any exposed credentials immediately
- C. Open an issue to inform users
- D. Force push a commit removing the data

**Answer: B**

Explanation:

Revoke and/or rotate the exposed credentials immediately so they can no longer be used - this is the critical first step before you undertake any history-rewriting or cleanup.

### NEW QUESTION # 23

When a token is used to perform actions across different GitHub resources, how is this reflected in audit logs?

- A. Only the first repository accessed is recorded
- B. GitHub creates a ZIP archive of all token activity
- C. The audit log stores only the token name and not its actions

- D. Each API action made with the token generates a separate audit log entry

**Answer: D**

Explanation:

Each API call authenticated with a token generates its own audit-log event, so you'll see a distinct entry for every action performed across different resources, each annotated with the token's hashed ID, actor, and source IP.

### NEW QUESTION # 24

Which of the following GitHub token types supports fine-grained repository permissions AND is recommended for CI/CD automation?

- A. GitHub App Installation Access Tokens
- B. Device Tokens
- C. Personal Access Tokens (PATs)
- D. OAuth tokens

**Answer: A**

Explanation:

GitHub App Installation Access Tokens are privileged to the exact permissions you grant the App - down to individual repositories - and rotate automatically, making them the recommended choice for CI/CD automation workflows that demand least-privilege, fine-grained access.

### NEW QUESTION # 25
