

Authoritative MTCNA High Passing Score bring you Practical Valid Braindumps MTCNA Sheet for MikroTik MikroTik Certified Network Associate Exam

What's more, part of that Exam4Free MTCNA dumps now are free: <https://drive.google.com/open?id=1O#PFVncVb-UJqxqP-suHd9b9x6WRdsEH>

At the information age, knowledge is wealth as well as productivity. All excellent people will become outstanding one day as long as one masters skill. In order to train qualified personnel, our company has launched the MTCNA Study Materials for job seekers. We are professional to help tens of thousands of the candidates get their MTCNA certification with our high quality of MTCNA exam questions and live a better life.

The MTCNA Certification is widely recognized in the networking industry and is a valuable asset for those who are looking to advance their careers in the field. MikroTik is a popular networking solution for small to medium sized businesses, and the MTCNA certification is particularly useful for those who work in this sector. MikroTik Certified Network Associate Exam certification is also a great way for networking professionals to demonstrate their expertise and knowledge to potential employers.

Valid Braindumps MTCNA Sheet, Reliable MTCNA Exam Questions

As long as you bought our MTCNA practice guide, then you will find that it cost little time and efforts to learn. You can have a quick revision of the MTCNA learning quiz in your spare time. Also, you can memorize the knowledge quickly. There almost have no troubles to your normal life. You can make use of your spare moment to study our MTCNA Preparation questions. The results will become better with your constant exercises. Please have a brave attempt.

MikroTik Certified Network Associate Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

What is necessary for PPPoE client configuration?

- A. Interface (on which PPPoE client is going to work)
- B. Static IP address on PPPoE client interface
- C. ip firewall nat masquerade rule

Answer: A,C

Explanation:

To configure a PPPoE client on MikroTik, you need to:

* Set the client interface (usually ether1 or another WAN-facing port).

- * Optionally add NAT masquerading to enable LAN users to reach the internet.
- * IP address on the interface is assigned dynamically from the ISP after PPPoE negotiation, so a static IP is not required.

Option Analysis:

- * A.#Required - You must select the interface that initiates the PPPoE connection.
- * B.#Not Required - The IP is typically assigned by the PPPoE server (ISP).
- * C.#Required - NAT masquerade is commonly used to allow internet access for private IP clients behind the router.

Extract from MTCNA Course Material - PPPoE Client Setup:

"The PPPoE client must have an interface specified. A NAT masquerade rule is recommended for internet access sharing." Extract from Rene Meneses MTCNA Study Guide - PPPoE:

"You do not need to assign a static IP to the PPPoE client interface. IP is received after successful login." Extract from MikroTik Wiki - PPPoE Client:

"After setting up the interface and credentials, PPPoE client negotiates and receives dynamic IP. Add NAT if routing LAN traffic."

NEW QUESTION # 24

Which of these are possible solutions to bridge two networks over a wireless link:

- A. One device in AP mode, another one in station-pseudobridge-clone
- B. One device in AP mode, another one in station-pseudobridge
- C. One device in AP mode, another one in station
- D. Both devices in AP mode and enable WDS mode

Answer: A,B,D

Explanation:

To bridge two networks over a wireless link (i.e., perform Layer 2 bridging), MikroTik offers several wireless modes that support bridging:

- * WDS (Wireless Distribution System) is MikroTik's mechanism to forward Layer 2 frames over wireless
- * pseudobridge and pseudobridge-clone attempt to mimic Layer 2 bridging, with some limitations Option analysis:
- * A.#Correct-Using AP mode on both ends and enabling WDS allows full Layer 2 bridging
- * B.#Correct-pseudobridge-clone allows limited bridging by spoofing the MAC address of the connected host
- * C.#Correct-station-pseudobridge enables partial bridging (one client per MAC)
- * D.#Incorrect-station mode alone does not support Layer 2 bridging; it performs routing/NAT instead Extract from MTCNA Course Material - Bridging and Wireless Section:

"To bridge over wireless, you can use WDS or station-pseudobridge(-clone). WDS provides true Layer 2 bridging, while pseudobridge methods simulate it for single hosts." Extract from Rene Meneses Study Guide - Wireless Bridging:

"WDS is most reliable for bridging. pseudobridge and pseudobridge-clone work with one client and should be used cautiously."

Extract from Terry Combs Notes - Wireless Bridging:

"station mode alone is not sufficient for bridging. Use WDS or pseudobridge options."

NEW QUESTION # 25

To use masquerade, you need to specify

- A. action=masquerade, in-interface, chain=src-nat
- B. action=accept, out-interface, chain=src-nat
- C. action=masquerade, out-interface, chain=src-nat
- D. action=masquerade, out-interface, chain=dst-nat

Answer: C

NEW QUESTION # 26

To use masquerade, you need to specify:

- A. action=masquerade, in-interface, chain=src-nat
- B. action=accept, out-interface, chain=src-nat
- C. action=masquerade, out-interface, chain=src-nat
- D. action=masquerade, out-interface, chain=dst-nat

Answer: C

Explanation:

Masquerading is a form of source NAT (src-nat) where the router dynamically replaces the source address of outgoing packets with the IP address of the router's outgoing interface. This is commonly used when internal LAN clients access the internet through a single public IP.

Key points for masquerade configuration:

* Use chain=src-nat (because it modifies the source address)

* Use action=masquerade

* Specify the out-interface (i.e., the WAN interface)

MTCNA Course Material - NAT Section:

"To configure masquerading, use chain=src-nat and action=masquerade. Specify out-interface to define the traffic direction." Rene

Meneses MTCNA Study Guide - NAT Examples:

"Masquerade automatically uses the IP address of the specified out-interface. Required parameters: chain=src-nat, action=masquerade, out-interface." MikroTik Wiki - Source NAT / Masquerade:

"Masquerade is a special form of src-nat. You must use it in chain=src-nat and define the out-interface for which NAT will be applied." Option A: Incorrect action=accept (used in filter rules, not NAT) Option C: in-interface is not applicable here Option D: chain=dst-nat is used for destination NAT, not source NAT Only Option B is fully correct.

NEW QUESTION # 27

What does the firewall action "Redirect" do? Select all true statements.

- A. Redirects a packet to a specified port on a host in the network
- B. Redirects a packet to the router
- C. Redirects a packet to a specified port on the router
- D. Redirects a packet to a specified IP

Answer: A,D

NEW QUESTION # 28

.....

MTCNA provides actual MTCNA Exam Questions to help candidates pass on the first try, ultimately saving them time and resources. These questions are of the highest quality, ensuring success for those who use them. To achieve success, it's crucial to have access to quality MikroTik Certified Network Associate Exam (MTCNA) exam dumps and to prepare for the likely questions that will appear on the exam. MTCNA helps candidates overcome any difficulties they may face in exam preparation, with a 24/7 support team ready to assist with any issues that may arise.
