## Reliable ASIS-PSP Test Forum & Certification Success Guaranteed, Easy Way of Training & ASIS-PSP Reliable Test Dumps

Our ASIS ASIS-PSP practice materials are suitable for exam candidates of different degrees, which are compatible whichever level of knowledge you are in this area. These ASIS ASIS-PSP Training Materials win honor for our company, and we treat ASIS ASIS-PSP test engine as our utmost privilege to help you achieve your goal.

ASIS PSP Certification Exam is designed for individuals who are seeking validation of their skills, abilities, and knowledge in the physical security industry. It requires a minimum of five years of professional experience in the physical security field, with experience in the evaluation or application of physical security measures being necessary. By passing the exam, an individual obtains a credential that distinguishes them as a Physical Security Professional. Physical Security Professional Exam certification can lead to professional advancement, higher salaries, and an overall improvement in an individual's perceived value within their organization.

By obtaining the ASIS-PSP Certification, security professionals can demonstrate their expertise and dedication to their profession. Physical Security Professional Exam certification is recognized by employers and clients around the world, and it can help professionals advance their careers and increase their earning potential.

## ASIS Physical Security Professional Exam Sample Questions (Q114-Q119):

NEW QUESTION # 114

The type of electric locking device that permits free mechanical egress from the protected side of the door is the:

- A. Electromagnetic
- B. Delayed egress
- C. Vertical pin
- D. **Electric strike**

**Answer: D**

Explanation:

An electric strike allows for remote electrical locking and unlocking while still permitting free mechanical egress from the protected (inside) side of the door. This is essential for life safety and code compliance, especially in commercial and public buildings.

A (Vertical pin) is a mechanical lock component, not an electric device.

B (Electromagnetic) locks typically require power to release and may not allow mechanical egress without integration.

D (Delayed egress) restricts exit temporarily, which may violate free egress rules depending on application.

#### **NEW QUESTION # 115**

What is a means of making sure that a supervisor or other employees go through a prescribed series of inspections that will ascertain that functions or procedures for which they are responsible are being properly executed?

- A. Internal Audit
- B. Supervisory Inspection
- C. **Programmed Supervision**
- D. Security survey

**Answer: C**

Explanation:

Programmed supervision is a structured process that ensures supervisors or designated personnel systematically check critical functions or areas for compliance, performance, and accountability. It involves scheduled tasks or checkpoints and is a key mechanism in ongoing quality and security assurance.

#### **NEW QUESTION # 116**

What must be thought of as supportive of security operations rather than as the principal defense?

- A. Bonds
- B. Loss-prevention
- C. **Insurance**
- D. Premiums

**Answer: C**

#### **NEW QUESTION # 117**

What incorporate a detection system, which can eliminate concerns over water damage and false activation of the system?

- A. **Pre-action system**
- B. Post-action system
- C. Exposure
- D. Discovery system

**Answer: A**

Explanation:

Pre-action sprinkler systems are designed to prevent accidental water discharge. These systems include a detection component

(such as smoke or heat detectors) that must activate before the water enters the pipes.

They are often used in areas where water damage would be catastrophic (e.g., data centers, museums).

Discovery system (A), Exposure (B), and Post-action system (C) are not standard terms in fire suppression.

"Post-action system" is incorrect; the correct terminology is "pre-action system." References:

## NEW QUESTION # 118

Which type of lamp emits a strong light with a bluish cast?

- A. Metal halide
- B. Mercury vapor
- C. Sodium vapor
- D. Incandescent

**Answer: A**

### Explanation:

Metal halide lamps emit a bright, white light with a bluish cast. This makes them ideal for applications requiring good color rendering and visibility, such as CCTV surveillance or high-intensity outdoor lighting.

A (Sodium vapor) emits yellow/orange light.

C (Mercury vapor) also has a bluish tint but less desirable color rendering.

D (Incandescent) gives off a warm, yellowish light.
