CV0-004前提条件、CV0-004関連受験参考書

弊社のCompTIA問題集を購入するなら、あなたは必ず後悔しません。我々は自分の商品に自信があります。お客様は我々の商品を利用したら、CV0-004試験に合格できます。もしCV0-004試験に落ちるなら、我々は返金できます。それとも、お客様はほかの試験に対応する問題集を交換するのを選ぶことができます。

CompTIA Cloud+ (2025) 認定 CV0-004 試験問題 (Q41-Q46):

質問 # 41

A cloud engineer is reviewing a disaster recovery plan that includes the following requirements:

- * System state, files, and configurations must be backed up on a weekly basis.
- * The system state, file, and configuration backups must be tested annually.

Which of the following backup methods should the engineer implement for the first week the plan is executed?

- A. Differential
- **B. Full**
- C. Snapshot
- D. Incremental

正解: B

解説:

A full backup method should be implemented for the first week the disaster recovery plan is executed. This will ensure that a complete copy of the system state, files, and configurations are backed up. Subsequent backups can be differential or incremental as per the plan. References: Backup methodologies, including the importance of full backups, are part of the data management strategies in cloud computing covered in the CompTIA Cloud+ certification.

質問 # 42

An independent security researcher discovers a potential vulnerability in a package. The vulnerability could lead to exposure. Which of the following is the first action the security researcher should take?

- A. Open a public-facing issue on the vendor's Git repository.
- B. Uninstall the package to remove the threat.
- C. Report the vulnerability to the package vendor's security email.
- D. Write a blog post describing how the package vulnerability was discovered.

正解: C

解説:

The first action in responsible disclosure is to privately notify the vendor through their security contact so they can investigate and fix the vulnerability before it becomes public knowledge.

質問 # 43

Which of the following industry standards mentions that credit card data must not be exchanged or stored in cleartext?

- A. SOC2
- B. CSA
- C. PCI-DSS
- D. GDPR

正解: C

解説:

The Payment Card Industry Data Security Standard (PCI-DSS) is the industry standard that mandates that credit card data must not be stored or transmitted in cleartext. It includes requirements for encryption, access control, and other security measures to protect cardholder data. References: Official PCI Security Standards Council Site.

質問 # 44

A company hosts various containerized applications for business uses. A client reports that one of its routine business applications fails to load the web-based login prompt hosted in the company cloud.

INSTRUCTIONS

Click on each device and resource. Review the configurations, logs, and characteristics of each node in the architecture to diagnose the issue. Then, make the necessary changes to the WAF configuration to remediate the issue.

Web app 1

Web app 2

Web app 3

Web app 4

Client app

- A. Check the Explanation for the complete Solution

正解: A

解説:

The issue is with Web app 1 (Finance application).

From the WAF logs, we can see that requests to <https://webapp1.comptia.org/FIN/login.html> are being blocked (Rule ID 1006). The rule is configured to block access to the finance application's login page. This corresponds to the reported issue of the web-based login prompt not loading.

To remediate the issue, the WAF configuration for Rule ID 1006 should be changed from "Block" to "Allow". This will enable the web-based login prompt to load for the client.

Additionally, the client app configuration indicates that the client laptop (IP 192.168.10.142) is trying to access the service, and the WAF logs show that requests from this IP are being blocked due to the current rule set. Changing the action for Rule ID 1006 will also ensure that legitimate attempts to access the login page from this IP are not blocked.

Steps for remediation:

Go to the WAF configuration.

Find Rule ID 1006 for the Finance application 1.

Change the action from "Block" to "Allow".

Save the changes.

Reference:

Web application firewall (WAF) configurations typically include rules that define which traffic should be allowed or blocked.

Blocking legitimate traffic to login pages can prevent users from accessing the application, which seems to be the case here.

Client application configurations and WAF logs provide valuable insights into the source of the traffic and the rules that are affecting it. It's important to ensure that the rules align with the intended access policies for the application.

質問 # 45

An DevOps engineer is receiving reports that users can no longer access the company's web application after hardening of a web server. The users are receiving the following error:

ERR_SSL/ERSION_OR_CIPHER_MISMATCH.

Which of the following actions should the engineer take to resolve the issue?

- A. Review logs on the WAF
- **B. Configure TLS 1.2 or newer.**
- C. Restart the web server.
- D. Update the web server.

正解: B

解説:

To resolve the ERR_SSL_VERSION_OR_CIPHER_MISMATCH error after hardening a web server, the engineer should configure the server to use TLS 1.2 or newer. This error often occurs when the server or client supports an outdated version of SSL/TLS or incompatible cipher suites. Updating to a modern, secure version of TLS ensures compatibility and enhances security. References: The CompTIA Cloud+ certification includes governance, risk, compliance, and security for the cloud, emphasizing the importance of implementing up-to-date security protocols like TLS to protect data in transit and ensure secure communications in cloud environments.

質問 # 46

.....

当社ShikenPASSの設立以来、私たちはCV0-004試験資料に大規模な人材、資料、および財源を投入してきました。そして今まで、私たちは間違いなく全世界に研究資料を紹介し、幸運を求めるすべての人々を作るという大胆な考えを持っていますより良い機会、彼らの人生の価値を実現するためのアクセス権を持っています。したがって、当社のCV0-004練習問題は、試験に合格し、より良い未来を勝ち取るのに役立ちます。また、常に先駆的な精神を持ち続け、あなたの道を歩むプロジェクトに積極的に取り組みます。
