- A. SSL deep inspection
- B. DNS filter
- C. Web filter with inline-CASB

NEW QUESTION # 41

Which event log subtype captures FortiSASE SSL VPN user creation?

- A. VPN Events
- B. User Events
- C. Administrator Events
- D. Endpoint Events

Answer: B

Explanation:

The event log subtype that captures FortiSASE SSL VPN user creation is User Events. This subtype is specifically designed to log activities related to user management, such as creating, modifying, or deleting user accounts. When an SSL VPN user is created, it falls under this category because it involves adding a new user to the system.

Here's why the other options are incorrect:

- * A. Endpoint Events: These logs pertain to activities related to endpoint devices, such as device registration, compliance checks, or security posture assessments. SSL VPN user creation is unrelated to endpoint events.
- * B. VPN Events: These logs capture activities related to VPN connections, such as session establishment, termination, or errors.

While SSL VPN usage generates VPN events, the creation of a user account itself is not logged under this subtype.

* D. Administrator Events: These logs track actions performed by administrators, such as configuration changes or policy updates. While an administrator might create the SSL VPN user, the specific event of user creation is categorized under User Events, not Administrator Events.
