100% Pass 2026 Amazon SAA-C03 Authoritative Certification Practice

In this competitive society, being good at something is able to take up a large advantage, especially in the IT industry. Gaining some

IT authentication certificate is very useful. Amazon SAA-C03 is a certification exam to test the IT professional knowledge level and has a Pivotal position in the IT industry. While Amazon SAA-C03 exam is very difficult to pass, so in order to pass the Amazon certification SAA-C03 exam a lot of people spend a lot of time and effort to learn the related knowledge, but in the end most of them do not succeed. Therefore PDFVCE is to analyze the reasons for their failure. The conclusion is that they do not take a pertinent training course. Now PDFVCE experts have developed a pertinent training program for Amazon Certification SAA-C03 Exam, which can help you spend a small amount of time and money and 100% pass the exam at the same time.

Amazon AWS Certified Solutions Architect - Associate Sample Questions (Q396-Q401):

NEW QUESTION # 396

A company has a highly dynamic batch processing job that uses many Amazon EC2 instances to complete it.

The job is stateless in nature, can be started and stopped at any given time with no negative impact, and typically takes upwards of 60 minutes total to complete. The company has asked a solutions architect to design a scalable and cost-effective solution that meets the requirements of the job.

What should the solutions architect recommend?

- A. Implement the processing on AWS Lambda
- **B. Implement EC2 Spot Instances**
- C. Purchase EC2 Reserved Instances
- D. Implement EC2 On-Demand Instances

Answer: B

NEW QUESTION # 397

[Design Operationally Excellent Architectures]

A social media company wants to store its database of user profiles, relationships, and interactions in the AWS Cloud. The company needs an application to monitor any changes in the database. The application needs to analyze the relationships between the data entities and to provide recommendations to users.

Which solution will meet these requirements with the LEAST operational overhead?

- A. Use Amazon Quantum Ledger Database (Amazon QLDB) to store the information. Use Neptune Streams to process changes in the database.
- B. Use Amazon Neptune to store the information. Use Amazon Kinesis Data Streams to process changes in the database.
- **C. Use Amazon Neptune to store the information. Use Neptune Streams to process changes in the database.**
- D. Use Amazon Quantum Ledger Database (Amazon QLDB) to store the information. Use Amazon Kinesis Data Streams to process changes in the database.

Answer: C

Explanation:

Amazon Neptune: Neptune is a fully managed graph database service that is optimized for storing and querying highly connected data. It supports both property graph and RDF graph models, making it suitable for applications that need to analyze relationships between data entities.

Neptune Streams: Neptune Streams captures changes to the graph and streams these changes to other AWS services. This is useful for applications that need to monitor and respond to changes in real-time, such as providing recommendations based on user interactions and relationships.

Least Operational Overhead: Using Neptune Streams directly with Amazon Neptune ensures that the solution is tightly integrated, reducing the need for additional components and minimizing operational overhead. This integration simplifies the architecture by eliminating the need for a separate service like Kinesis for change processing.

NEW QUESTION # 398

A company plans to reduce the amount of data that Amazon S3 transfers to the servers in order to lower the operating costs as well as lower the latency of retrieving the data. To accomplish this, you need to use simple structured query language (SQL) statements to filter the contents of Amazon S3 objects and retrieve just the subset of data that you need.

Which of the following services will help you accomplish this requirement?

- A. Redshift Spectrum
- **B. S3 Select**
- C. AWS Step Functions
- D. RDS

Answer: B

Explanation:

With Amazon S3 Select, you can use simple structured query language (SQL) statements to filter the contents of Amazon S3 objects and retrieve just the subset of data that you need. By using Amazon S3 Select to filter this data, you can reduce the amount of data that Amazon S3 transfers, which reduces the cost and latency to retrieve this data.

Amazon S3 Select works on objects stored in CSV, JSON, or Apache Parquet format. It also works with objects that are compressed with GZIP or BZIP2 (for CSV and JSON objects only), and server-side encrypted objects. You can specify the format of the results as either CSV or JSON, and you can determine how the records in the result are delimited.

RDS is incorrect. Although RDS is an SQL database where you can perform SQL operations, it is still not valid because you want to apply SQL transactions on S3 itself, and not on the database, which RDS cannot do.

Redshift Spectrum is incorrect. Although Amazon Redshift Spectrum provides a similar in-query functionality like S3 Select, this service is more suitable for querying your data from the Redshift external tables hosted in S3. The Redshift queries are run on your cluster resources against local disk. Redshift Spectrum queries run using per-query scale-out resources against data in S3 which can entail additional costs compared with S3 Select.

AWS Step Functions is incorrect because this only lets you coordinate multiple AWS services into serverless workflows so you can build and update apps quickly. References:

NEW QUESTION # 399

A company runs a web application that is backed by Amazon RDS. A new database administrator caused data loss by accidentally editing information in a database table. To help recover from this type of incident, the company wants the ability to restore the database to its state from 5 minutes before any change within the last 30 days.

Which feature should the solutions architect include in the design to meet this requirement?

- A. Manual snapshots
- B. Multi-AZ deployments
- C. Read replicas
- **D. Automated backups**

Answer: D

NEW QUESTION # 400

A corporation has recruited a new cloud engineer who should not have access to the CompanyConfidential Amazon S3 bucket. The cloud engineer must have read and write permissions on an S3 bucket named AdminTools.

Which IAM policy will satisfy these criteria?

- A.
- **B.**
- C.
- D.

Answer: B

Explanation:

https://docs.amazonaws.cn/en_us/IAM/latest/UserGuide/reference_policies_examples_s3_rw-bucket.html The policy is separated

into two parts because the ListBucket action requires permissions on the bucket while the other actions require permissions on the objects in the bucket. You must use two different Amazon Resource Names (ARNs) to specify bucket-level and object-level permissions. The first Resource element specifies arnaws:s3:::AdminTools for the ListBucket action so that applications can list all objects in the AdminTools bucket.

NEW QUESTION # 401

.....

Before you choose to end your practices of the SAA-C03 study materials, the screen will display the questions you have done, which help you check again to ensure all questions of SAA-C03 practice prep are well finished. The report includes your scores of the SAA-C03 learning guide. Also, it will display how many questions of the SAA-C03 exam questions you do correctly and mistakenly. In a word, you can compensate for your weakness and change a correct review plan of the study materials.
