

100% Pass Quiz 2026 Microsoft The Best Pass AZ-120 Guarantee

AZ-104 Renewal Exam (2025/2026) – Updated Questions and Verified Answers | 100% Guaranteed Microsoft Pass

Question 1

You need to assign a role to a user to manage all resources in a specific Azure resource group. Which role should you assign?

- A. Owner
- B. Contributor
- C. Reader
- D. User Access Administrator

Correct Answer: B. Contributor

Rationale: The Contributor role grants full access to manage all resources within a resource group without allowing changes to role assignments, unlike the Owner role. Reader only allows view access, and User Access Administrator is for managing access, not resources.

Question 2

What should you configure to enforce multi-factor authentication (MFA) for users accessing Azure resources from untrusted locations?

- A. Azure AD Conditional Access policy
- B. Azure AD Identity Protection
- C. Azure AD Privileged Identity Management
- D. Azure Security Center

Correct Answer: A. Azure AD Conditional Access policy

Rationale: Conditional Access policies in Azure AD enforce MFA based on conditions like location, ensuring secure access to Azure resources from untrusted networks.

Question 3

P.S. Free & New AZ-120 dumps are available on Google Drive shared by BraindumpQuiz: <https://drive.google.com/open?id=1JsP7khythyyjYXRLP4hRV9NommesXdV>

Before the clients purchase our AZ-120 study materials, they can have a free trial freely. The clients can log in our company's website and visit the pages of our products. The pages of our products lists many important information about our AZ-120 study materials and they include the price, version and updated time of our products, the exam name and code, the total amount of the questions and answers, the merits of our AZ-120 Study Materials and the discounts. You can have a comprehensive understanding of our AZ-120 study materials after you see this information. Then you can look at the free demos and try to answer them to see the value of our AZ-120 study materials and finally decide to buy them or not.

To prepare for the Microsoft AZ-120 certification exam, candidates should have a strong understanding of SAP architecture and Azure infrastructure. They should be familiar with Azure services such as Azure Virtual Machines, Azure Virtual Networks, and Azure Storage. Additionally, candidates should have experience with SAP applications such as SAP HANA, SAP NetWeaver, and SAP S/4HANA. It is also recommended that candidates complete the Microsoft Azure Administrator Associate certification before taking AZ-120 Exam.

>> Pass AZ-120 Guarantee <<

Microsoft AZ-120 Latest Braindumps Sheet | Valid AZ-120 Test Book

BraindumpQuiz is a reliable platform to provide candidates with effective AZ-120 study braindumps that have been praised by all users. For find a better job, so many candidate study hard to prepare the AZ-120 exam. It is not an easy thing for most people to pass the AZ-120 exam, therefore, our website can provide you with efficient and convenience learning platform, so that you can obtain the AZ-120 certificate as possible in the shortest time. Just study with our AZ-120 exam questions for 20 to 30 hours, and then you will be able to pass the AZ-120 exam with confidence.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q152-Q157):

NEW QUESTION # 152

You plan to deploy an SAP environment on Azure that will use Azure Availability Zones. Which load balancing solution supports the deployment?

- A. Azure Basic Load Balancer
- B. Azure Application Gateway v1 SKU
- C. Azure Standard Load Balancer

Answer: C

Explanation:

When you deploy Azure VMs across Availability Zones and establish failover solutions within the same Azure region, some restrictions apply:

You can't use an Azure Basic Load Balancer to create failover cluster solutions based on Windows Server Failover Clustering or Linux Pacemaker. Instead, you need to use the Azure Standard Load Balancer SKU.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/workloads/sap/sap-ha-availability-zones>

Topic 1, Contoso Ltd

Existing Environment

Active Directory

The network contains an on-premises Active Directory domain named ad.contoso.com. User email addresses use a domain name of contoso.com.

SAP Environment

The current SAP environment contains the following components:

SAP Solution Manager

SAP ERP Central Component (SAP ECC)

SAP Supply Chain Management (SAP SCM)

SAP application servers that run Windows Server 2008 R2

SAP HANA database servers that run SUSE Linux Enterprise Server 12 (SLES 12) Problem Statements Contoso identifies the following issues in its current environment:

The SAP HANA environment lacks adequate resources.

The Windows servers are nearing the end of support.

The datacenters are at maximum capacity.

Requirements

Planned Changes

Contoso identifies the following planned changes:

Deploy Azure Virtual WAN.

Migrate the application servers to Windows Server 2016.

Deploy ExpressRoute connections to all of the offices and manufacturing facilities.

Deploy SAP landscapes to Azure for development, quality assurance, and production.

All resources for the production landscape will be in a resource group named SAPProduction.

Business goals

Contoso identifies the following business goals:

Minimize costs whenever possible.

Migrate SAP to Azure without causing downtime.

Ensure that all SAP deployments to Azure are supported by SAP.

Ensure that all the production databases can withstand the failure of an Azure region.

Ensure that all the production application servers can restore daily backups from the last 21 days.

Technical Requirements

Contoso identifies the following technical requirements:

Inspect all web queries.

Deploy an SAP HANA cluster to two datacenters.

Minimize the bandwidth used for database synchronization.

Use Active Directory accounts to administer Azure resources.

Ensure that each production application server has four 1-TB data disks.

Ensure that an application server can be restored from a backup created during the last five days within 15 minutes.

Implement an approval process to ensure that an SAP administrator is notified before another administrator attempts to make changes to the Azure virtual machines that host SAP.

It is estimated that during the migration, the bandwidth required between Azure and the New York office will be 1 Gbps. After the migration, a traffic burst of up to 3 Gbps will occur.

Proposed Backup Policy

An Azure administrator proposes the backup policy shown in the following exhibit.

            "lun": "[copyIndex('datadisks')]",

```

NEW QUESTION # 154

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
When you deploy two standalone SAP Web Dispatchers to separate clustered virtual machines, you must deploy a load balancer to make the solution highly available.	<input type="radio"/>	<input type="radio"/>
When you deploy Primary Application Server (PAS) and Additional Application Server (AAS) instances on separate virtual machines for SAP NetWeaver, you must deploy an Azure load balancer for high availability.	<input type="radio"/>	<input type="radio"/>
When using an availability group listener for SAP application connectivity to Microsoft SQL Server servers in different Azure regions, you must deploy a load balancer in front of the disaster recovery SQL Server virtual machine.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:
answer area

Statements	Yes	No
When you deploy two standalone SAP Web Dispatchers to separate clustered virtual machines, you must deploy a load balancer to make the solution highly available.	<input type="radio"/>	<input checked="" type="radio"/>
When you deploy Primary Application Server (PAS) and Additional Application Server (AAS) instances on separate virtual machines for SAP NetWeaver, you must deploy an Azure load balancer for high availability.	<input checked="" type="radio"/>	<input type="radio"/>
When using an availability group listener for SAP application connectivity to Microsoft SQL Server servers in different Azure regions, you must deploy a load balancer in front of the disaster recovery SQL Server virtual machine.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Statements	Yes	No
When you deploy two standalone SAP Web Dispatchers to separate clustered virtual machines, you must deploy a load balancer to make the solution highly available	<input type="radio"/>	<input checked="" type="radio"/>
When you deploy Primary Application Server (PAS) and Additional Application Server (AAS) instances on separate virtual machines for SAP NetWeaver, you must deploy an Azure load balancer for high availability	<input checked="" type="radio"/>	<input type="radio"/>
When using an availability group listener for SAP application connectivity to Microsoft SQL Server servers in different Azure regions, you must deploy a load balancer in front of the disaster recovery SQL Server virtual machine	<input checked="" type="radio"/>	<input type="radio"/>

Box 1: No

Load balancers. Load balancers are used to distribute traffic to virtual machines in the application-tier subnet.

For high availability, use the built-in SAP Web Dispatcher, Azure Load Balancer, or network appliances.

Your choice depends on the traffic type (like HTTP or SAP GUI) or the required network services, like Secure Sockets Layer (SSL) termination.

Box 2: Yes

Availability group listener SAP application SQL server load balancer disaster recovery Box 3: Yes Reference:

If you deploy SAP by using the Azure Resource Manager templates for SAP, Azure Enhanced Monitoring is installed automatically.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION # 156

You have an SAP development landscape on Azure.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can use SAP Landscape Management (LaMa) to automate stopping, starting, and deallocating SAP virtual machines.	<input type="radio"/>	<input type="radio"/>
You can use SAP Solution Manager to automate stopping, starting, and deallocating SAP virtual machines.	<input type="radio"/>	<input type="radio"/>
You can use SAP HANA Cockpit to automate stopping, starting, and deallocating SAP virtual machines.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
You can use SAP Landscape Management (LaMa) to automate stopping, starting, and deallocating SAP virtual machines.	<input checked="" type="radio"/>	<input type="radio"/>
You can use SAP Solution Manager to automate stopping, starting, and deallocating SAP virtual machines.	<input type="radio"/>	<input checked="" type="radio"/>
You can use SAP HANA Cockpit to automate stopping, starting, and deallocating SAP virtual machines.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION # 157

.....

There are a lot of experts and professors in our company. All AZ-120 study torrent of our company are designed by these excellent experts and professors in different area. We can make sure that our AZ-120 test torrent has a higher quality than other study

materials. The aim of our design is to improve your learning and help you gain your certification in the shortest time. If you long to gain the certification, our Planning and Administering Microsoft Azure for SAP Workloads guide torrent will be your best choice. Many experts and professors consist of our design team, you do not need to be worried about the high quality of our AZ-120 Test Torrent. If you decide to buy our study materials, you will have the opportunity to enjoy the best service.
