What's more, part of that PassExamDumps CS0-003 dumps now are free: <https://drive.google.com/open?id=1mFoIC-8QNFBD9GqkwYQyeZAJKHAV-hJ>

The CompTIA Cybersecurity Analyst (CySA+) Certification Exam (CS0-003) certification is one of the hottest career advancement credentials in the modern CompTIA world. The CompTIA Cybersecurity Analyst (CySA+) Certification Exam (CS0-003) certification can help you to demonstrate your expertise and knowledge level. With only one badge of CompTIA Cybersecurity Analyst (CySA+) Certification Exam in CS0-003 Certification, successful candidates can advance their careers and increase their earning potential.

According to the needs of all people, the experts and professors in our company designed three different versions of the CS0-003 study materials for all customers. The three versions are very flexible for all customers to operate. According to your actual need, you can choose the version for yourself which is most suitable for you to preparing for the coming exam. All the CS0-003 Study Materials of our company can be found in the three versions. It is very flexible for you to use the three versions of the CS0-003 study materials to preparing for your coming exam.

## Test CS0-003 Questions Vce | CS0-003 Exam Preparation

Facts proved that if you do not have the certification, you will be washed out by the society. So it is very necessary for you to try your best to get the CS0-003 certification in a short time. It is known to us that getting the CS0-003 certification has become more and more popular for a lot of people in different area, including students, teachers, and housewife and so on. Everyone is desired to have the certification. Because The CS0-003 Certification can bring a lot of benefits for people, including money, a better job and social status and so on.

## CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q394-Q399):

NEW QUESTION # 394

An organization discovered a data breach that resulted in PII being released to the public. During the lessons learned review, the panel identified discrepancies regarding who was responsible for external reporting, as well as the timing requirements. Which of the following actions would best address the reporting issue?

- A. Creating a playbook denoting specific SLAs and containment actions per incident type
- B. Designating specific roles and responsibilities within the security team and stakeholders to streamline tasks
- C. Researching federal laws, regulatory compliance requirements, and organizational policies to document specific reporting SLAs
- D. Defining which security incidents require external notifications and incident reporting in addition to internal stakeholders

**Answer: C**

Explanation:

Researching federal laws, regulatory compliance requirements, and organizational policies to document specific reporting SLAs is the best action to address the reporting issue. Reporting SLAs are service level agreements that specify the time frame and the format for notifying the relevant authorities and the affected individuals of a data breach. Reporting SLAs may vary depending on the type and severity of the breach, the type and location of the data, the industry and jurisdiction of the organization, and the internal policies of the organization. By researching and documenting the reporting SLAs for different scenarios, the organization can ensure that it complies with the legal and ethical obligations of data breach notification, and avoid any penalties, fines, or lawsuits that may result from failing to report a breach in a timely and appropriate manner.<sup>12</sup> References: When and how to report a breach: Data breach reporting best practices, Incident and Breach Management

#### NEW QUESTION # 395

A new prototype for a company's flagship product was leaked on the internet. As a result, the management team has locked out all USB drives. Optical drive writers are not present on company computers. The sales team has been granted an exception to share sales presentation files with third parties. Which of the following would allow the IT team to determine which devices are USB enabled?

- A. SIEM logs
- B. Asset tagging
- C. Data loss prevention
- D. Device encryption

**Answer: A**

Explanation:

A security information and event management (SIEM) system is a tool that collects and analyzes log data from various sources and provides alerts and reports on security incidents and events. A SIEM system can help the IT team to determine which devices are USB enabled by querying the log data for events related to USB device insertion, removal, or usage. The other options are not relevant or effective for this purpose. Reference: CompTIA Cybersecurity Analyst (CySA+) Certification Exam Objectives (CS0-002), page 15; <https://www.sans.org/reading-room/whitepapers/analyst/security-information-event-management-siem-implementation-33969>

#### NEW QUESTION # 396

An analyst notices that logs contain multiple events for computer account changes during monthly patch maintenance windows, resulting in a flood of tickets. The events generated are from the same system and time frame. The analyst determines that these tickets could be closed without human interaction. Which of the following is the best tool for automatically closing tickets containing the same information?

- A. EDR
- B. SOAR
- C. SIEM
- D. CASB

**Answer: B**

Explanation:

Security Orchestration, Automation, and Response (SOAR) platforms are designed to automate repetitive security tasks, such as closing tickets with known benign patterns. In this case, SOAR can automatically analyze and close tickets generated from

predictable events like monthly patch maintenance.

### NEW QUESTION # 397

A security analyst reviews the following results of a Nikto scan:

```
share@LinuxHunt: ~
File Edit View Search Terminal Help
-----
+ Server: Apache
+ Root page / redirects to: https://www.proz.com/
+ No CGI Directories found (use '-C all' to force check all possible dirs)
+ File/dir '/crawler-pit/' in robots.txt returned a non-forbidden or redirect HTTP code (200)
+ File/dir '/profile/' in robots.txt returned a non-forbidden or redirect HTTP code (200)
+ File/dir '/profile/$/' in robots.txt returned a non-forbidden or redirect HTTP code (200)
+ File/dir '/profile?/' in robots.txt returned a non-forbidden or redirect HTTP code (200)
+ File/dir '/profile/?/' in robots.txt returned a non-forbidden or redirect HTTP code (200)
+ File/dir '/profile/23725/' in robots.txt returned a non-forbidden or redirect HTTP code (200)
+ File/dir '/profile/1273295/' in robots.txt returned a non-forbidden or redirect HTTP code (200)
+ File/dir '/?sp=login/' in robots.txt returned a non-forbidden or redirect HTTP code (200)
+ File/dir '/?sp=404/' in robots.txt returned a non-forbidden or redirect HTTP code (200)
+ File/dir '/translation-news/wp-admin/' in robots.txt returned a non-forbidden or redirect HTTP code (500)
+ "robots.txt" contains 10 entries which should be manually viewed.
+ lines
+ /crossdomain.xml contains 1 line which should be manually viewed for improper domains or wildcards.
+ Server is using a wildcard certificate: "*.proz.com"
+ DEBUG HTTP verb may show server debugging information. See http://msdn.microsoft.com/en-us/library/e8z01xdh%28VS.80%29.aspx for details.
+ /kboard/: KBoard Forum 0.3.0 and prior have a security problem in forum_edit_post.php, forum_post.php and forum_reply.php
+ /lists/admin/: PHPList pre 2.6.4 contains a number of vulnerabilities including remote administrative access, harvesting user info and more. Default login to admin interface is admin/phplist
+ /splashAdmin.php: Cobalt Qube 3 admin is running. This may have multiple security problems as described by www.scan-associates.net. These could not be tested remotely.
+ /ssdef/: SiteSeed pre 1.4.2 has 'major' security problems.
+ /sshome/: SiteSeed pre 1.4.2 has 'major' security problems.
+ /tiki/: Tiki 1.7.2 and previous allowed restricted Wiki pages to be viewed via a 'URL trick'. Default login/pass could be admin/admin
+ /tiki/tiki-install.php: Tiki 1.7.2 and previous allowed restricted Wiki pages to be viewed via a 'URL trick'. Default login/pass could be admin/admin
+ /scripts/samples/details.idc: See RFP 9901; www.wiretrip.net
+ OSVDB-396: /_vti_bin/shtml.exe: Attackers may be able to crash FrontPage by requesting a DOS device, like shtml.exe/aux.htm -- a DoS was not attempted.
+ OSVDB-637: /~root/: Allowed to browse root's home directory.
+ /cgi-bin/wrap: comes with IRIX 6.2; allows to view directories
+ /forums//admin/config.php: PHP Config file may contain database IDs and passwords.
+ /forums//admin/config.php: PHP Config file may contain database IDs and passwords.
+ /forums//administrator/config.php: PHP Config file may contain database IDs and passwords.
```

Which of the following should the security administrator investigate next?

- A. phpList
- B. tiki
- C. shtml.exe
- D. sshome

### Answer: C

Explanation:

The security administrator should investigate shtml.exe next, as it is a potential vulnerability that allows remote code execution on the web server. Nikto scan results indicate that the web server is running Apache on Windows, and that the shtml.exe file is accessible in the /scripts/ directory. This file is part of the Server Side Includes (SSI) feature, which allows dynamic content generation on web pages. However, if the SSI feature is not configured properly, it can allow attackers to execute arbitrary commands on the web server by injecting malicious code into the URL or the web page12. Therefore, the security administrator should check the SSI configuration and permissions, and remove or disable the shtml.exe file if it is not needed. References: Nikto- Penetration testing, Introduction, Web application scanning with Nikto

### NEW QUESTION # 398

An organization is planning to adopt a zero-trust architecture. Which of the following is most aligned with this approach?

- A. Network segmentation to separate sensitive systems from the rest of the network.
- B. Trusting users who successfully authenticate once with multifactor authentication.
- C. Whitelisting specific IP addresses that are allowed to access the network.
- D. Automatically trusting internal network communications over external traffic.

### Answer: A

Explanation:

Comprehensive and Detailed Step-by-Step Explanation: Network segmentation supports zero-trust principles by ensuring sensitive systems are isolated and access is restricted based on identity, role, and context. Unlike traditional models, zero-trust architecture does not automatically trust authenticated users or internal network traffic. It enforces strict access controls to minimize risk.
