Nowadays, everyone lives so busy every day, and we believe that you are no exception. If you want to save your time, it will be the best choice for you to buy our NS0-185 study torrent. Because the greatest advantage of our study materials is the high effectiveness. If you buy our NS0-185 guide torrent and take it seriously consideration, you will find you can take your exam after twenty to thirty hours' practice. So come to buy our NS0-185 Test Torrent, it will help you pass your NS0-185 exam and get the certification in a short time that you long to own.

To those time-sensitive exam candidates, our high-efficient NS0-185 actual dumps comprised of important news will be best help. Only by practicing our NS0-185 learning guide on a regular base, you will see clear progress happened on you. Besides, rather than waiting for the gain of our NS0-185 Practice Engine, you can download them immediately after paying for it, so just begin your journey toward success now.

NS0-185 Reliable Exam Online & Guaranteed NS0-185 Questions Answers

As is known to us, the high pass rate is a reflection of the high quality of NS0-185 study torrent. There are more than 98 percent that passed their exam, and these people both used our NS0-185 test torrent. There is no doubt that our NS0-185 guide torrent has a higher pass rate than other study materials. We deeply know that the high pass rate is so important for all people, so we have been trying our best to improve our pass rate all the time. Now our pass rate has reached 99 percent. If you choose our NS0-185 study torrent as your study tool and learn it carefully,

Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q15-Q20):

NEW QUESTION # 15

You are asked to install a new cluster with six FAS8060 nodes. While running Config Advisor, you see the messages shown in the exhibit.

The customer does not want ACP cabled on their cluster.

Which two actions would allow the installation to be completed successfully? (Choose two.)

- A. Advise the customer that they must acknowledge that they are not using ACP on the installation.
- B. Advise the sales team that the customer is operating without ACP and that the customer is asking you to leave it that way.
- C. Advise NGS that the customer has a controller in an unsupported state.
- D. Advise the customer that the error will cause the controller to not operate properly and create an unsupported state.

Answer: A,B

Explanation:

Alternate Control Path (ACP) is a recommended but optional feature in ONTAP installations. Config Advisor flags ACP-related warnings when ACP is partially cabled or not detected, but this does not automatically place the system in an unsupported state. NetApp installation policy requires that when customers choose not to deploy ACP, the decision must be explicitly acknowledged and documented. This ensures the customer understands the operational implications and accepts responsibility for reduced out-of-band shelf management visibility.

Additionally, installation best practices require that this decision be communicated to the sales team or account team. This ensures alignment across NetApp stakeholders and prevents future support disputes.

The system does not become unsupported solely because ACP is not used, provided the customer acknowledgment process is followed. Therefore, options implying an unsupported or nonfunctional state are incorrect.

The correct answers are B and C.

NEW QUESTION # 16

You are using Broadcom BES-53248 switches for a cluster interconnect in a base configuration.

In this scenario, what is the minimum number of ISLs supported between the switches?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

Cluster interconnect switches must be connected to each other with Inter-Switch Links (ISLs) to maintain resilient cluster networking and to ensure that cluster LIFs on different switches can communicate properly. In the Broadcom BES-53248 cluster switch documentation, the base configuration explicitly reserves switch ports 55-56 as "100GbE cluster Inter-Switch Link (ISL) ports, base configuration." The fact that two specific ports are designated as ISL ports in the base configuration strongly indicates that the expected minimum ISL design is two ISLs—one per port—between the switch pair. This matches standard NetApp validated cluster switch designs, where redundant ISLs provide resilience against a single ISL failure and help maintain cluster connectivity under maintenance or partial link faults. In installation practice, this is part of "robust and operational" cluster design: redundant paths are preferred/required to avoid single points of failure in the cluster network fabric.

Option A (1 ISL) would create a single point of failure: if that ISL fails, inter-switch cluster connectivity can be compromised. Options C and D are not the "minimum" in the base configuration context; while some architectures may support multiple ISLs for additional bandwidth, the base configuration callout clearly highlights two dedicated ISL ports. Therefore, in a base configuration for BES-53248 cluster interconnect switches, the minimum number of supported ISLs between the two switches is 2.

NEW QUESTION # 17

After installing an AFF A700 with ADPv2, one shelf was powered off and disks were not assigned. Which two resources will help you find a solution? (Choose two.)

- A. NetApp Documentation Center
- B. Active IQ Config Advisor
- C. NetApp Knowledge Base
- D. Active IQ Digital Advisor

Answer: B,C

NEW QUESTION # 18

You attempt to create a data volume on aggr0 and receive a warning about severe performance or stability problems. What is the reason for this warning?

- A. The performance load of a data volume should not share aggr0 with vol0.
- B. The performance load generated by vol0 cannot be shared.
- C. Controller failover and storage failover must occur in parallel.
- D. Controller failover and storage failover must occur at different times.

Answer: A

Explanation:

The root aggregate hosts system volumes such as vol0. Adding data volumes can negatively impact system operations, causing performance and stability issues.

NEW QUESTION # 19

An administrator issued the cluster setup command and configured a 2-node ONTAP 9.8 cluster. In this scenario, which tool would the administrator use to validate the configuration?

- A. Active IQ Config Advisor
- B. NetAppDocs
- C. Interoperability Matrix Tool
- D. Active IQ Upgrade Advisor

Answer: A

Explanation:

After cluster setup, NetApp best practices require validating hardware, cabling, HA configuration, and system settings. Active IQ Config Advisor is the primary tool used for post-installation validation. It checks cabling correctness, HA pathing, disk ownership, network configuration, firmware versions, and other critical installation parameters.

The other tools listed are used for planning, documentation, or upgrades, not configuration validation.

NEW QUESTION # 20

.....

Our team of professionals and experts has prepared NS0-185 vce dumps by keeping the vigilant eyes on the current exam information and exam requirements. In case you failed exam with our NS0-185 study guide we will get you 100% money back guarantee and you can contact our support if you have any questions about our NS0-185 Real Dumps. We will be your support when you need us anytime.
