Amazon AWS-Developer (AWS Certified Developer - Associate) Exam is a certification exam offered by Amazon Web Services (AWS) to test the skills and knowledge of developers working with AWS technologies. AWS-Certified-Developer-Associate exam is designed to validate a developer's proficiency in developing scalable, secure, and fault-tolerant applications using AWS services and tools.

To pass the AWS Certified Developer - Associate Exam, candidates must demonstrate their proficiency in designing, developing, and deploying cloud-based applications using AWS services such as AWS Lambda, Amazon API Gateway, Amazon S3, Amazon DynamoDB, and AWS Elastic Beanstalk. AWS-Certified-Developer-Associate Exam also covers topics such as AWS SDKs, AWS CLI, and AWS CloudFormation. Passing AWS-Certified-Developer-Associate exam not only validates the candidate's skills and knowledge but also demonstrates their commitment to their profession and their willingness to stay up-to-date with the latest technologies and industry trends. Overall, the AWS Certified Developer - Associate Exam is an excellent way for developers to enhance their career prospects and become more competitive in the job market.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample

Questions (Q249-Q254):

NEW QUESTION # 249

A static website is hosted in an Amazon S3 bucket. Several HTML pages on the site use JavaScript to download images from another Amazon S3 bucket. These images are not displayed when users browse the site.

What is the possible cause for the issue?

- A. The images must be stored in the same Amazon S3 bucket.
- B. The referenced Amazon S3 bucket is in another region.
- C. Cross Origin Resource Sharing must be enabled on the Amazon S3 bucket.
- D. Port 80 must be opened on the security group in which the Amazon S3 bucket is located.

Answer: D

NEW QUESTION # 250

An Amazon DynamoDB table uses a Global Secondary Index (GSI) to support read queries. The primary table is write-heavy, whereas the GSI is used for read operations. Looking at Amazon CloudWatch metrics, the Developer notices that write operations to the primary table are throttled frequently under heavy write activity.

However, write capacity units to the primary table are available and not fully consumed.

Why is the table being throttled?

- A. Amazon DynamoDB Streams is not enabled on the table
- B. A large write operation is being performed against another table
- C. The GSI write capacity units are underprovisioned
- D. There are not enough read capacity units on the primary table

Answer: B

NEW QUESTION # 251

A company has an ecommerce web application with an Amazon RDS for MySQL DB instance. The marketing team has noticed some unexpected updates to the product and pricing information on the website, which is impacting sales targets. The marketing team wants a database specialist to audit future database activity to help identify how and when the changes are being made.

What should the database specialist do to meet these requirements? (Choose two.)

- A. Create an RDS event subscription to the audit event type.
- B. Publish the database logs to Amazon CloudWatch Logs.
- C. Enable auditing of CONNECT and QUERY_DML events.
- D. Enable Enhanced Monitoring on the DB instance.
- E. SSH to the DB instance and review the database logs.

Answer: A,B

NEW QUESTION # 252

A company is using continuous integration/continuous deliver (CI/CD) system.

A developer must automate the deployment of an application software package to Amazon EC2 instances and virtual servers that run on premises.

Which AWS services should the developer use to meet these requirements?

- A. AWS CodeDeploy
- B. AWS CodeBuild
- C. AWS Cloud9
- D. AWS Elastic Beanstalk

Answer: A
