UiPath인증 UiPath-ABAv1시험을 어떻게 공부하면 패스할수 있을지 고민중이시면 근심걱정 버리고ITDumpsKR 의 UiPath인증 UiPath-ABAv1덤프로 가보세요. 문항수가 적고 적중율이 높은 세련된UiPath인증 UiPath-ABAv1 시험준비 공부자료는ITDumpsKR제품이 최고입니다.

UiPath UiPath-ABAv1 시험요강:

주제	소개
주제 1	• Email Automation: Handling emails via IMAP, POP3, SMTP, and integrating with Microsoft and Gmail are covered in this section. It also discusses the usage of Microsoft 365 and Gsuite packages.
주제 2	• Exception Handling: This topic covers using Try Catch, Throw, Rethrow, and Retry Scope activities.
주제 3	• Working with Files and Folders: Creating, managing, and iterating through local files and folders are covered here.
주제 4	• Control Flow: Control Flow activities, workflow types, and Flowchart layouts are discussed here, along with the usage of IF, Flow Decision, Switch activities, While, Do While, and For Each.
주제 5	• UI Automation: UI Automation principles, including modern and classic design experiences, are discussed alongside utilizing modern recorder and input • output activities.
주제 6	• PDF Automation: It discusses extracting data from native and scanned PDFs. Moreover, the topic focuses on different techniques for working with PDF documents.
주제 7	• Integration Service: This topic explains Integration Service, use of integration service connectors, triggers, and the Integration Service Connector Builder.
주제 8	• Libraries and Templates: Creating, publishing, and consuming process libraries, as well as working with templates, are discussed here.
주제 9	• Debugging: Debugging modes, actions, breakpoints, and debugging panels are explained in this topic, along with using Profile Execution features to improve project execution performance.

주제 10	Logging: This topic addresses interpreting robot execution logs and implementing logging best practices during development for effective debugging and analysis.
주제 11	Variables and Arguments: This topic explores data types and how they're utilized, along with creating, managing, and using variables and arguments. It also addresses the differences between variables, arguments, global constants, and global variables.
주제 12	Data Manipulation: String manipulation, array operations, list initialization, dictionary usage, and DataTable operations are discussed in this topic.
주제 13	Workflow Analyzer: This topic covers the use of Workflow Analysis, along with configuring Workflow Analyzer settings.
주제 14	Excel Automation: It explains Excel Automation principles and modern Excel integration including reading, writing, and manipulating Excel files. Additionally, the topic focuses on the usage of the Excel Workbook activities.
주제 15	Object Repository: Creation, publication, and consumption of UI libraries with static and dynamic descriptors are covered in this section.
주제 16	Implementation Methodology: Understanding project implementation stages, interpreting PDDs and SDDs, and conducting peer reviews are discussed here.
주제 17	Studio Interface: Here, the topic covers installing Studio Community Edition, connecting to Orchestrator, and navigating the Studio interface. It also includes explanations of different Studio profiles, management of packages, use of activity project settings, and the use of options in the Studio Backstage view.

UiPath UiPath-ABAv1완벽한 공부문제 - UiPath-ABAv1덤프공부

ITDumpsKR에서는 IT인증시험에 관한 모든 덤프를 제공해드립니다. 우선 시험센터에서 정확한 시험코드를 확인하시고 그 코드와 동일한 코드로 되어있는 덤프를 구매하셔서 덤프에 있는 문제와 답을 기억하시면 시험을 쉽게 패스하실수 있습니다. UiPath-ABAv1 시험은 IT인증시험중에서 많은 인기를 가지고 있는 시험입니다. UiPath-ABAv1 시험을 패스하여 자격증을 취득하시면 취업이나 승진에 많은 가산점이 되어드릴것입니다.

최신 UiPath Certified Professional UiPath-ABAv1 무료샘플문제 (Q83-Q88):

질문 # 83

What are the environments that the UiPath Platform provides entitlements for deploying and licensing the product?

- A. Automation Suite, Orchestrator
- B. Robots, Studio, Orchestrator
- C. Automation Cloud, Automation Suite, Individual Products
- D. Document Understanding, Test Suite, AI Center

정답: C

설명:

The UiPath Platform provides entitlements for deploying and licensing products in various environments, notably the Automation Cloud, Automation Suite, and individual products like Robots, Studio, and Orchestrator. The Automation Cloud offers cloud-based services while the Automation Suite enables deployment in hybrid or on-premises environments. Individual products focus on specific components of the UiPath ecosystem that can be licensed separately.

UiPath documentation and learning materials from the UiPath Academy.

질문 # 84

Which of the following is a relevant process metric during the requirements gathering stage?

- A. Average Handling Time
- **B. Number of applications used**
- C. Process time dependencies
- D. Expected increase in transaction volume

정답: B

설명:

During the requirements gathering stage, one of the relevant process metrics is the Number of applications used. This metric is important because it provides insight into the complexity of the process and the potential integration points required for automation. Understanding the number of applications involved in a process can help in assessing the scope of the automation project, the variety of interfaces that need to be worked with, and the level of effort required to automate the process¹.

질문 # 85

What is the goal of deploying automation in RPA?

- **A. To make the automated process available for production use**
- B. To train employees on how to use UiPath software
- C. To install and configure UiPath software on a computer
- D. To test UiPath software for performance and reliability

정답: A

설명:

The primary goal of deploying automation in RPA is to make the automated process available for production use. This involves automating tasks and workflows to increase efficiency, reduce errors, and free up human workers for more strategic tasks, thereby enhancing productivity and operational effectiveness across the organization.

Reference: UiPath Academy and learning materials.

질문 # 86

What is an example of a feasibility-based prioritization criterion?

- A. There is a high number of stakeholders who are interested in the business process or requirement
- **B. All the inputs are standardized and digital**
- C. Each step in the business process has a different stakeholder
- D. There is a high number of qualified candidates for the development team

정답: B

설명:

A feasibility-based prioritization criterion refers to factors that make a process more suitable for automation.

Having all inputs standardized and digital is an example of such a criterion because it indicates that the process is likely to be more straightforward to automate. Standardized, digital inputs reduce the complexity of the automation task and increase the likelihood of successful implementation. This is in contrast to processes with non-standardized or non-digital inputs, which may require additional steps such as digitization or standardization before they can be automated effectively¹.

References: The explanation is based on the UiPath Community Forum discussions and the UiPath Documentation Portal's information on feasibility and complexity in process assessment for RPA implementation¹.

질문 # 87

How can you allocate licenses in the Automation Cloud?

- **A. Direct assignment to user, Group allocation**
- B. Only group allocation, the user have to assign the license to themselves afterwards
- C. Pair allocation only, the license is assigned to the user and bound to a selected group
- D. Only direct allocation to user, having the option to group the users in the tenant
