VCE Fire-Inspector-II Dumps - Test Fire-Inspector-II Result

If you still worry about your Fire-Inspector-II exam, if you still doubt whether it is worthy of purchasing our software, what you can do to clarify your doubts is to download our Fire-Inspector-II free demo. Once you have checked our demo, you will find the study materials we provide are what you want most. Our target is to reduce your pressure and improve your learning efficiency from preparing for Fire-Inspector-II Exam.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q60-Q65):

NEW QUESTION # 60

Horizontal exits shall not comprise more than ____ of the required exits from any floor area in a Group I-2 occupancy.

- A. 3/4
- B. 1/2
- C. 1/3
- D. 2/3

Answer: B

Explanation:

For Group I-2 occupancies (such as hospitals, nursing homes, and similar healthcare facilities), horizontal exits are used to improve

fire safety by allowing occupants to move to a safer area without using stairs or elevators.

IFC 2021, Section 1026.1 (Horizontal Exits - General Requirements) states that:

Horizontal exits shall not comprise more than one-half (1/2) of the required exits from any floor area in a Group I-2 occupancy. This ensures that at least 50% of the required exits remain traditional vertical or exterior exits, maintaining a balance between horizontal and traditional egress routes.

NEW QUESTION # 61

Conditions that may exist and warrant a modification include all of the following except where the:

- A. modification is in compliance with the intent and purpose of the code.
- B. modification does not lessen health, life, and fire safety.
- C. special individual reason makes the strict letter of the code impractical.
- **D. modification requires the use of an alternative building material.**

Answer: D

Explanation:

Reference to Code Modifications and Equivalency Requirements:

According to International Fire Code (IFC 2021), Section 104.10, modifications may be granted if they meet the intent of the code and do not reduce fire and life safety.

The NFPA 1 (Fire Code) and NFPA 101 (Life Safety Code) also allow modifications under specific conditions, provided safety is maintained.

Understanding the Exception in the Question:

The question asks for conditions that DO NOT warrant a modification.

Using an alternative building material alone does not justify a modification unless it meets equivalent safety standards.

Code modifications are granted based on maintaining or improving safety, not simply changing materials.

Clarification of Incorrect Answer Choices:

A: Modification does not lessen health, life, and fire safety # Correct condition for modification, so incorrect answer IFC 104.10 allows modifications as long as safety is not compromised.

C: Modification is in compliance with the intent and purpose of the code # Correct condition for modification, so incorrect answer Codes provide flexibility if the intent of fire and life safety is still met.

D: Special individual reason makes the strict letter of the code impractical # Correct condition for modification, so incorrect answer Some codes allow modifications if strict compliance is impractical, provided alternative safety measures are implemented.

Conclusion:

The correct and verified answer is B (modification requires the use of an alternative building material) because material substitution alone does not justify a modification unless safety is maintained, as per IFC 104.10 and NFPA standards.

NEW QUESTION # 62

Evidence of a fire inspection report being written and delivered to the person in charge of the property:

- **A. forms the basis for any legal action.**
- B. must be copied to the building code official.
- C. must be retained by the code official for a minimum of three years.
- D. must be copied to the city manager or mayor's office.

Answer: A

Explanation:

Fire Inspection Report as Legal Documentation

A fire inspection report serves as an official record of inspection findings, compliance violations, and corrective actions required. It provides documented evidence that can be used in legal proceedings if enforcement actions are necessary.

2. Legal Basis and ICC Reference

According to the International Fire Code (IFC) and NFPA Standards, a properly documented inspection report ensures that violations are enforceable in court.

The ICC Fire Inspector Study Guide (2021) emphasizes that an inspection report is a critical legal document that supports the fire department or authority having jurisdiction (AHJ) in case of disputes or appeals.

3. Retention of Reports (Why Other Options Are Incorrect)

Option B (must be copied to the building code official) - Not necessarily required unless local jurisdiction mandates coordination

between fire and building code officials.

Option C (must be copied to the city manager or mayor's office) - Fire inspection reports are not typically sent to city administration unless they involve significant violations or policy concerns.

Option D (must be retained by the code official for a minimum of three years) - While record retention is required, the period varies by jurisdiction (some require 3 years, others more), making this an incomplete and less universally correct answer.

NEW QUESTION # 63

An acceptance test for a fire alarm system in a new apartment building should be scheduled after:

- A. the system has been installed and operating for one year.
- B. the hydrostatic test of the underground main is completed.
- C. each zone is completed.
- D. the contractor verifies full compliance.

Answer: D

Explanation:

IFC Section 901.5 (Acceptance Tests) requires fire protection systems, including fire alarms, to be tested upon completion to ensure compliance with NFPA 72 (National Fire Alarm and Signaling Code) and the IFC. The contractor's verification of full compliance (B) signals readiness for the official acceptance test by the fire code official, ensuring all components are installed and functional.

Option A (zone-by-zone testing) is impractical for final acceptance. Option C ties the test to water supply, irrelevant to alarms.

Option D (one year) is excessive and not required by IFC or NFPA 72 for initial acceptance. Thus, B is correct.

Reference: IFC 2021, Section 901.5 (Acceptance Tests), NFPA 72.

NEW QUESTION # 64

In the fire code, ABS plastics are designated as ____ plastic materials.

- A. Group A
- B. Group B
- C. Group C
- D. Commodity Class III

Answer: A

Explanation:

IFC Section 2303.7 classifies ABS (acrylonitrile butadiene styrene) plastics as Group A (high-hazard) due to their flammability and smoke production, per NFPA 13. Options B and C are less hazardous, D is a commodity class, not a plastic group. Thus, A is correct.

NEW QUESTION # 65

.....

RealExamFree offers updated and real International Code Council Fire-Inspector-II Exam Dumps for 67 - Fire Inspector II Exam (Fire-Inspector-II) test takers who want to prepare quickly for the Fire-Inspector-II examination. These actual Fire-Inspector-II exam questions have been compiled by a team of professionals after a thorough analysis of past papers and current content of the Fire-Inspector-II test. If students prepare with these valid Fire-Inspector-II questions, they will surely become capable of clearing the Fire-Inspector-II examination within a few days.
