We boost professional expert team to organize and compile the C_SEC_2405 training materials diligently and provide the great service which include the service before and after the sale, the 24-hours online customer service. So you can not only get the first-class C_SEC_2405 Exam Questions but also get the first-class services. If you have any question, you can just contact us online or via email at any time you like. And you can free download the demos of our C_SEC_2405 study guide before your payment.

SAP C_SEC_2405 Exam Syllabus Topics:

Topic	Details
Topic 1	• Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.
Topic 2	• SAP Fiori Authorizations and SAP S • 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S • 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.
Topic 3	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.

Topic 4	• User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.
Topic 5	• Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.

C_SEC_2405 sure pass torrent & C_SEC_2405 training questions & C_SEC_2405 valid practice

About C_SEC_2405 exam, PremiumVCEDump has a great sound quality, will be the most trusted sources. Feedback from the thousands of registration department, a large number of in-depth analysis, we are in a position to determine which supplier will provide you with the latest and the best C_SEC_2405 practice questions. The PremiumVCEDump SAP C_SEC_2405 Training Materials are constantly being updated and modified, has the highest SAP C_SEC_2405 training experience. If you want to pass the exam, please using our PremiumVCEDump SAP C_SEC_2405 exam training materials. PremiumVCEDump SAP C_SEC_2405 Add to your shopping cart, it will let you see unexpected results.

SAP Certified Associate - Security Administrator Sample Questions (Q28-Q33):

NEW QUESTION # 28
Your developer has created a new custom transaction for your SAP S/4HANA on-premise system and has provided you a list of the authorizations needed to execute the new ABAP program."What must you do to ensure that each required authorization is automatically created every time this new custom transaction is added to a PFCG role?

- A. Maintain each authorization object in transaction SU24 and set the Default Status to "Yes".
- B. Maintain each authorization object in transaction SU22 and set the Default Status to "Yes".
- C. Maintain each authorization in transaction SU24 and set the Default Status to "Yes".
- D. Maintain each authorization in transaction SU22 and set the Check Indicator value to

Answer: A

NEW QUESTION # 29
Which SU01 user types are NOT enabled for interaction? Note: There are 2correct answers to this question.

- A. Communications Data
- B. System
- C. Dialog
- D. Service

Answer: B,D

Explanation:
In SAP, certainSU01 user typesare not enabled for interactive use:
* Service Users (A):
* Designed for background jobs or tasks requiring anonymous or shared access.
* Cannot log in interactively.
* System Users (B):
* Used for communication between systems and background processes.
* Does not support interactive login.
Why Others Are Incorrect:
* Dialog Users (C):Designed specifically for interactive logins.
* Communications Data (D):Often refers to communication-specific settings, not user types.
SAP Security References:

* SAP Help Portal: User Type Overview
* SAP Documentation: SU01 User Type Functionalities

NEW QUESTION # 30

What happens to data within SAP Enterprise Threat Detection during the aggregation process? Note: There are 3 correct answers to this question.

- A. It is enriched.
- B. It is categorized.
- C. It is pseudonymized.
- D. It is normalized.
- E. It is prioritized.

Answer: A,C,D

Explanation:
During the aggregation process in SAP Enterprise Threat Detection, data undergoes several transformations to enhance security analysis. It is pseudonymized, replacing sensitive identifiers (e.g., user IDs) with pseudonyms to protect privacy while maintaining data utility for threat detection. Data is normalized, converting heterogeneous data formats from various sources into a standardized structure, ensuring consistency for analysis across systems. Additionally, data is enriched by adding contextual information, such as system metadata or threat intelligence, to improve the accuracy of threat identification. These processes enable SAP Enterprise Threat Detection to efficiently analyze large volumes of data while safeguarding sensitive information. Prioritization is not part of aggregation, as it relates to post-analysis actions, and categorization occurs during analysis, not aggregation. By pseudonymizing, normalizing, and enriching data, SAP Enterprise Threat Detection ensures robust threat detection capabilities, supporting real-time monitoring and compliance with data protection regulations in SAP environments.

NEW QUESTION # 31

For users with system administration authorization, which additional functions are provided by the SAP Easy Access menu? Note: There are 2 correct answers to this question.

- A. Creating roles
- B. Creating users
- C. Calling menus for roles and assigning them to users
- D. Calling programs

Answer: A,B

Explanation:
In SAP systems, users with system administration authorization have access to additional functions in the SAP Easy Access menu to manage system security and user administration. The menu includes options for creating roles, allowing administrators to use transaction PFCG to define and maintain authorization roles, which are critical for assigning permissions to users based on their job functions. Additionally, the menu provides access to creating users, enabling administrators to use transaction SU01 to set up user master records, including user IDs, passwords, and role assignments. These functions are essential for managing access control and ensuring system security. Calling menus for roles and assigning them to users is not a specific function of the Easy Access menu, as role assignment is typically performed within SU01 or PFCG.
Calling programs is a general user function, not exclusive to administrators. These administrative capabilities in the Easy Access menu streamline security management tasks in SAP environments.

NEW QUESTION # 32

Which cybersecurity type does NOT focus on protecting connected devices?

- A. Application security
- B. Network security
- C. Cloud security
- D. lot security

Answer: A

Explanation:
* Understanding the Context:Cybersecurity encompasses various domains to secure systems, networks, and data. Some types, however, focus on specific aspects such as devices, cloud systems, or applications.
* Type Definitions:
* A. Cloud Security:Primarily targets protecting cloud environments, services, and data stored in the cloud. It ensures safe interactions and data security between connected devices and cloud systems.
* B. Application Security:This type concentrates on protecting software applications from vulnerabilities or threats such as unauthorized access, code manipulation, and data leaks. It does not directly emphasize securing connected devices.
* C. Network Security:Focuses on securing the underlying network infrastructure, preventing unauthorized access, and ensuring data integrity during device communications.
* D. IoT (Internet of Things) Security:Specifically aims to safeguard connected devices and their ecosystems against threats like unauthorized access, firmware tampering, and botnet attacks.
* Why the Answer is B:Application security primarily involves securing code, user interfaces, and data within the application itself. It does not extend its scope to connected devices like IoT security or network systems. Other types, such as cloud security and network security, directly or indirectly protect connected devices due to their reliance on these infrastructures.
* SAP-Specific Context:In SAP systems, ensuring application security would involve securing ABAP code, enforcing robust authorization concepts, and applying patches and upgrades to SAP applications.
This, however, does not specifically focus on IoT devices or their interaction.
