1 / 5

What's more, part of that TorrentVCE 2V0-12.24 dumps now are free: [https://drive.google.com/open?id=1t\\_p-bsRiellV1LROdmSnj3O-3fMzrV-k](https://drive.google.com/open?id=1t_p-bsRiellV1LROdmSnj3O-3fMzrV-k)

Using computer-aided software to pass the VMware 2V0-12.24 exam has become a new trend. Because the new technology enjoys a distinct advantage, that is convenient and comprehensive. In order to follow this trend, our company product such a VMware vSphere Foundation 5.2 Administrator 2V0-12.24 Exam Questions that can bring you the combination of traditional and novel ways of studying.

To want to pass VMware 2V0-12.24 certification test can't be done just depend on the exam related books. Instead of blindly studying relevant knowledge the exam demands, you can do some valuable questions. The efficient exam dumps is essential tool to prepare for 2V0-12.24 test. Come on and purchase TorrentVCE VMware 2V0-12.24 Practice Test dumps. This braindump's hit accuracy is high and it works best the other way around. TorrentVCE VMware 2V0-12.24 questions and answers are a rare material which can help you pass your exam first time.

## Test 2V0-12.24 Guide Online & Reliable 2V0-12.24 Test Camp

TorrentVCE also has a VMware Practice Test engine that can be used to simulate the genuine 2V0-12.24 exam. This online

practice test engine allows you to answer questions in a simulated environment, giving you a better understanding of the exam's structure and format. With the help of this tool, you may better prepare for the VMware vSphere Foundation 5.2 Administrator (2V0-12.24) test.

## VMware vSphere Foundation 5.2 Administrator Sample Questions (Q41-Q46):

### NEW QUESTION # 41

An administrator is tasked with deploying a new application that requires both virtual machines and containers. Which two components of VMware Cloud Foundation would be utilized to provide a unified platform for managing these workloads? (Choose two.)

- A. Aria Operations
- B. IaaS Control Plane
- C. NSX
- D. HCX
- E. Aria Suite Lifecycle

**Answer: A,C**

Explanation:

Aria Operations: Aria Operations (formerly vRealize Operations) provides a unified platform for managing both virtual machines (VMs) and containers, offering monitoring, analytics, and performance management for the entire environment.

NSX: NSX provides network virtualization and security, which can be used to manage network traffic for both VMs and containers, offering a consistent networking model for both workloads.

### NEW QUESTION # 42

A host in a vSphere environment needs to be taken offline for hardware maintenance. An administrator needs to put the host in maintenance mode without causing VM downtime.

What three steps should the administrator follow? (Choose three.)

- A. Select the "Fractional data migration" option
- B. Ensure that the host is not part of a vSphere HA cluster
- C. Migrate all VMs off the host using vMotion
- D. Verify that no VMs are running on the host before maintenance
- E. Select the host and enter maintenance mode from the vSphere Client

**Answer: B,C,E**

Explanation:

Using vMotion to migrate all virtual machines off the host ensures that there is no downtime for the VMs during the maintenance process.

The administrator should then select the host and initiate maintenance mode from the vSphere Client to begin the maintenance process.

Ensuring the host is not part of a vSphere HA cluster before maintenance is important to avoid triggering unnecessary VM restarts or failovers during the process.

### NEW QUESTION # 43

Which four storage options are available in the SDDC Manager UI during deployment of a VI workload domain in VMware Cloud Foundation? (Choose four.)

- A. DATASTOR
- B. iSCSI
- C. NFS
- D. vVol
- E. VMFS on FC
- F. VMS on NFS
- G. vSAN

**Answer: C,D,E,G**

Explanation:

NFS: NFS (Network File System) can be used as a storage option during the deployment of a VI workload domain, typically for storing virtual machine files.

vVol: vVol (Virtual Volumes) provides a storage framework to allow for policy-driven management of virtual machine storage.

VMFS on FC: VMFS (VMware File System) on Fibre Channel (FC) provides block-level storage for virtual machines and is widely used in VMware environments.

vSAN: vSAN (Virtual SAN) is VMware's hyper-converged storage solution, which combines compute and storage resources in a VMware environment, and is available as a storage option for a workload domain.

#### NEW QUESTION # 44

An organization wants to centralize its VM templates, ISO images, and scripts to streamline deployment processes across multiple sites using Content Libraries.

Which three steps are required to create a new Content Library? (Choose three.)

- A. Configure the library to automatically sync with the vSphere Update Manager.
- B. Add the necessary permissions to allow users to upload content to the library.
- C. Choose "Create a new library" and enter a name and description for the library.
- D. Navigate to the Content Libraries section in the vSphere Client.
- E. Select "Local content library" and choose the datastore to store the library contents.

**Answer: C,D,E**

Explanation:

When creating a new Content Library, you first need to specify a name and description to define the library's purpose.

For a Local Content Library, you need to choose the datastore where the library contents will be stored. This is essential for proper organization and accessibility of content.

To create and manage content libraries, you must navigate to the Content Libraries section in the vSphere Client.

#### NEW QUESTION # 45

A specific VM is unable to communicate with other VMs in the same network. An administrator needs to identify and resolve the network connectivity issue.

What three steps should the administrator follow? (Choose three.)

- A. Check the network adapter settings in vCenter Server
- B. Verify the port group settings and VLAN configuration
- C. Restart the VM to reset its network connections
- D. Verify that the VM is connected to the correct port group
- E. Use the ESXi command line to check the status of the VM Kernel adapter

**Answer: A,B,D**

Explanation:

Port group settings and VLAN configurations need to be correct for VMs to communicate with each other on the same network. Ensuring they are properly configured is essential.

It's important to check that the VM is connected to the correct port group that matches the network configuration of the other VMs.

The network adapter settings in vCenter Server should be reviewed to ensure there are no misconfigurations that could prevent network communication.

#### NEW QUESTION # 46

.....

Great concentrative progress has been made by our company, who aims at further cooperation with our candidates in the way of using our 2V0-12.24 exam engine as their study tool. Owing to the devotion of our professional research team and responsible working staff, our training materials have received wide recognition and now, with more people joining in the 2V0-12.24 Exam army, we has become the top-raking 2V0-12.24 training materials provider in the international market. Believe in our 2V0-12.24 study guide, you will succeed in your exam!
