And we have money back guarantee on our Category-7A-General-and-Household-Pest-Control practice guide.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q56-Q61):

NEW QUESTION # 56

For non-powered particulate filters, which letter represents the most resistance to oil degradation?

- A. N
- B. R
- C. P

Answer: C

Explanation:

Non-powered particulate filters are classified by NIOSH with letters indicating oil resistance: N (not resistant to oil), R (resistant to oil), and P (oil-proof, most resistant to oil degradation). The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 3: Pesticide Safety) explains that P filters offer the highest resistance to oil degradation, making them suitable for environments where oil-based aerosols may be present. Option A (N) offers no oil resistance, and Option C (R) offers moderate resistance but not as much as P.

NEW QUESTION # 57

A carcinogen is a material that causes:

- A. Birth defects
- B. Teratogen
- C. Cancer

Answer: C

Explanation:

A carcinogen is a substance that can cause cancer, as defined in the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 3: Pesticide Safety). Some pesticides are classified as carcinogens due to their potential to cause cancer with long-term exposure. Option B (birth defects) is associated with teratogens, not carcinogens. Option C (teratogen) is incorrect because a teratogen is a substance that causes birth defects, not cancer, and the term itself is not the definition.

NEW QUESTION # 58

A commercial pesticide applicator certified in category 7A:

- A. Is not allowed to treat turf and ornamental areas of a property
- B. Can treat turf and ornamental areas of a property for bedbugs and grubs
- C. Can treat turf and ornamental areas for ticks and fleas

Answer: C

Explanation:

Category 7A (General and Household Pest Control) includes applying pesticides to control pests like ticks and fleas inside and outside structures, including turf and ornamental areas immediately adjacent to the structure (e.g., lawns or gardens). The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 1: Scope of Category 7A) confirms this scope. Option A is incorrect because bedbugs are indoor pests, and grubs require Category 3B (Turf Pest Control) certification. Option B is incorrect, as 7A applicators can treat outdoor areas for certain pests like ticks and fleas.

NEW QUESTION # 59

State pesticide regulations regarding pesticide service vehicles require the:

- A. Commercial pesticide applicator's license number be on the vehicle
- B. MSDS sheets for all pesticides be on board the vehicle
- C. Pesticide storage area be physically separate from the driver or passengers

Answer: C

Explanation:

NJDEP regulations (N.J.A.C. 7:30-9.10) require that pesticide service vehicles have a storage area for pesticides that is physically separate from the driver or passenger compartment to prevent exposure in case of spills or leaks. This is a safety measure to protect the driver and ensure compliance with transportation regulations. Option B is incorrect because, while the business registration number is required on the vehicle (see Question 8), the applicator's license number is not. Option C is incorrect because, although having Safety Data Sheets (SDS, formerly MSDS) on board is a best practice, it is not a strict requirement under New Jersey law for service vehicles; SDS sheets must be available at the business location or application site.

NEW QUESTION # 60

Cockroaches develop through:

- A. Gradual metamorphosis (egg, nymph, adult)
- B. Complete metamorphosis (egg, larva, pupa, adult)
- C. Total metamorphosis (egg, adult)

Answer: A

Explanation:

Cockroaches undergo gradual metamorphosis, which includes three stages: egg, nymph, and adult.

Nymphs hatch from eggs and resemble smaller, wingless adults, molting several times before reaching maturity. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7:

Cockroaches) confirms this life cycle for common species like the German cockroach. Option B (complete metamorphosis) applies to insects like flies or beetles. Option C (total metamorphosis) is not a recognized term and is incorrect.

NEW QUESTION # 61

.....

The OCPE Category-7A-General-and-Household-Pest-Control certification exam offers a great opportunity to advance your career. With the Pesticide Applicator Category 7A General and Household Pest Control Exam certification exam beginners and experienced professionals can demonstrate their expertise and knowledge.
