

300-610 Vce Test Simulator, Reliable 300-610 Exam Blueprint

The screenshot displays a Cisco VCE Test Simulator interface. At the top, it shows 'Case 300-610' and 'Designing Cisco Data Center Infrastructure'. The main area contains a network diagram with the following components: L3Out on the left, NAT in the center, and EPG Web on the right. A 'Contract' is shown between L3Out and EPG Web. Below the NAT component, there are two bridge domains, BD1 and BD2. A checkbox labeled 'Routing Enabled' is checked. To the right of the diagram, there are three VMs: VM7, VM8, and VM9, all connected to the EPG Web. Below the diagram, a question asks: 'What must be the default gateway of the servers on EPG Web?'. The options are: A. NAT application, B. inside address of L3Out, C. inside address of BD2, and D. inside address of BD1. The correct answer is B. Below the question, there is a 'NEW QUESTION # 333' section with a drag-and-drop interface. The left side has four configuration items: 'Set the number of queues', 'Set the SCI hash value', 'Assign each vCenter to a physical adapter', and 'Assign adapter order'. The right side has two empty yellow boxes for the answer. The bottom of the screenshot shows 'Answers: 1' and 'Explanation:'. The footer of the simulator reads 'Version 300-610 (Exam) - Total 300-610 Questions 10'.

On the basis of the current social background and development prospect, the 300-610 certifications have gradually become accepted prerequisites to stand out the most in the workplace. As far as we know, in the advanced development of electronic technology, lifelong learning has become more accessible, which means everyone has opportunities to achieve their own value and life dream. Our 300-610 Exam Materials are pleased to serve you as such an exam tool. You will have a better future with our 300-610 study braindumps!

Cisco 300-610 Exam is an essential certification exam for anyone interested in designing Cisco Data Center Infrastructure. Passing 300-610 exam will not only increase your knowledge in this area but also give you a competitive edge in the job market. Therefore, if you are interested in becoming a Cisco Data Center Infrastructure expert, take the time to prepare thoroughly and take the exam confidently.

Cisco 300-610 certification exam is important for IT professionals because it provides validation of their ability to design, deploy and manage complex data center infrastructures. Successful completion of the certification is proof that the professional has the ability to handle the latest data center technologies and can provide effective solutions that meet the demands of business. Designing Cisco Data Center Infrastructure certification can also enhance the professional's career by increasing opportunities for promotion and higher salaries.

How Can Cisco 300-610 Exam Questions Help You in Exam Preparation?

To make sure your situation of passing the Designing Cisco Data Center Infrastructure certificate efficiently, our 300-610 practice materials are compiled by first-rank experts. So the proficiency of our team is unquestionable. They help you review and stay on track without wasting your precious time on useless things. They handpicked what the 300-610 Study Guide usually tested in exam recent years and devoted their knowledge accumulated into these 300-610 actual tests. We are on the same team, and it is our common wish to help your realize it. So good luck!

Cisco 300-610 is an expert-level exam that is specifically designed to validate the skills and expertise of professionals in the field of designing Cisco data center infrastructure. 300-610 exam is one of the six exams leading to the highly sought-after CCNP Data Center certification. It is designed to help professionals gain specific knowledge and skills on how to design a Cisco data center network infrastructure.

Cisco Designing Cisco Data Center Infrastructure Sample Questions (Q159-Q164):

NEW QUESTION # 159

DRAG DROP

Drag and drop the configurations from the left onto the correct policies on the right.

Select and Place:

□

Answer:

Explanation:

□

Section: Compute Design

Explanation/Reference: https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/sw/gui/config/guide/2-2/

[b_UCSM_GUI_Configuration_Guide_2_2/](#)

NEW QUESTION # 160

An engineer configured the OSPF protocol in the vPC topology. During the catastrophic failure of one of the vPC member switches, the traffic was routed to a black hole. This route was caused by the long convergence time caused by the delay of the vPC member switch reboot. After the failure, the engineer rebooted both switches, but the secondary switch powered on before the primary one. It caused all the vPCs to be shut down due to consistency-check violations.

Which two features must be used to prevent these situations from happening in the future?

(Choose two.)

- A. ip arp synchronize
- B. peer-gateway
- C. delay restore
- D. system priority
- E. auto-recovery

Answer: C,E

Explanation:

<https://www.cisco.com/c/en/us/support/docs/switches/nexus-7000-series-switches/116187-configure-vpc-00.html>

□

NEW QUESTION # 161

A set of virtual machines must be live migrated from a data center to a disaster recovery site. The data center and disaster recovery sites are connected through an Inter-Pod Network topology.

The gateway address of the virtual machine is the same across the data center and disaster recovery. Which Cisco Nexus feature supports this requirement?

- A. FHRR
- B. FabricPath
- C. VXLAN EVPN
- D. VPLS

Answer: C

NEW QUESTION # 162

An engineer must design a solution based on Cisco Nexus 7709 Switches. The solution must connect test and development network segments and separate the enterprise applications from the production network. The network security team requires routing instances and the IP stack to be completely separated from each other and for traffic between the environments to undergo a deep packet inspection. The development team also requests the ability to allocate additional physical interfaces from the Cisco Nexus 7709 device in each environment.

Which solution meets these requirements?

- A. 1) Assign a separate VDC for the testing and development environments.
2. Place a firewall between the VDCs.
- B. 1) Create a VRF for the testing and development environments.
2) Use ACLs to control traffic between the two environments.
- C. 1) Create a separate VRF for the testing and development environments.
2) Control reachability by using firewall access policies.
- D. 1) Enable new routing instances for the testing and development environments in the same VDC.
2) Control reachability by using firewall access policies.

Answer: A

NEW QUESTION # 163

A network engineer is implementing Cisco UCS manager with Cisco UCS center integration. The company is strict security policies require that the logical profile of virtual network adapters and logical addressing assigned to Cisco UCS servers be managed by the Cisco UCS manager. The users must also be prevented from being able to acknowledge pending activities in the Cisco UCS manager. Which two profile must be used to meet these requirements? (Choose two.)

- A. Global maintenance
- B. Public network control
- C. Local service
- D. Restricted chassis
- E. Local power

Answer: A,C

Explanation:

https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/ucs-central/GUI-User-Guides/Operations/b_UCSC_Ops_Guide/b_UCSC_Ops_Guide_chapter_0111.html#id_16185
