Plat-Dev-301

Correct Answer: D

QUESTION: 7

An environment has two Apex Triggers: an after-update trigger on Account and an after-update trigger on Contact. The Account after-update trigger fires whenever an Account's address is updated, and it updates every associated Contact with that address. The Contact after-update trigger fires on every edit, and it updates every Campaign Member record related to the Contact with the Contact's state. Consider the following: A mass update of 200 Account records' addresses, where each Account has 50 Contacts. Each Contact has 1 Campaign Member. This means there are 10,000 Contact records across the Accounts and 10,000 Campaign Member records across the contacts. What will happen when the mass update occurs?

- Option A : The mass update will fail, since the two triggers fire in the same context, thus exceeding the number of records processed by DML statements.
- Option B : There will be no error, since each trigger fires within its own context and each trigger does not exceed the limit of the number of records processed by DML statements.
- Option C : There will be no error, since the limit on the number of records processed by DML statements is 50,000.
- Option D : The mass update of Account address will succeed, but the Contact address updates will fail due to exceeding number of records processed by DML statements.

Correct Answer: B

QUESTION: 8

Which type of controller is best suited when you want all of the basic DML functions from an object's normal new/edit page and want to include multiple records?

- Option A : Standard Controller
- Option B : Standard List/Set Controller
- Option C : Controller Extensions
- Option D : Custom Controller

Correct Answer: B

QUESTION: 9

A company wants to implement a new call center process for handling customer service calls. It requires service reps to ask for the caller's account number before proceeding with the rest of their call script. Following best practices, what should a developer use to meet this requirement?

- Option A : Approvals
- Option B : Flow Builder
- Option C : Apex Trigger
- Option D : Process Builder

Salesforce Plat-Dev-301 Study Material: Salesforce Certified Platform Developer II - Multiple Choice - VCEPrep Promises you "Money Back Guaranteed"

As is known to us, there are best sale and after-sale service of the Plat-Dev-301 certification training materials all over the world in our company. Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable Plat-Dev-301 Latest Questions for all customers. More importantly, it is evident to all that the Plat-Dev-301 training materials from our company have a high quality, and we can make sure that the quality of our Plat-Dev-301 exam questions will be higher than other study materials in the market.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q102-Q107):

NEW QUESTION # 102

An environment has two Apex triggers: an after-update trigger on Account and an after-update trigger on Contact.

The Account after-update trigger fires whenever an Account's address is updated, and it updates every associated Contact with that address. The Contact after-update trigger fires on every edit, and it updates every Campaign Member record related to the Contact with the Contact's state.

Consider the following: A mass update of 200 Account records' addresses, where each Account has 50 Contacts. Each Contact has one Campaign Member. This means there are 10,000 Contact records across the Accounts and 10,000 Campaign Member records across the contacts.

What will happen when the mass update occurs?

- A. The mass update will fail, since the two triggers fire in the same context, thus exceeding the number of records processed by DML statements.
- B. There will be no error, since each trigger fires within its own context and each trigger does not exceed the limit of the number of records processed by DML statements.
- C. The mass update of Account address will succeed, but the Contact address updates will fail due to exceeding number of records processed by DML statements.
- D. There will be no error and all updates will succeed, since the limit on the number of records processed by DML statements was not exceeded.

Answer: A

Explanation:

In this scenario, the governor limit for DML statements (150 DML operations and 10,000 DML rows per transaction) will be exceeded because the updates will cascade across related objects, significantly multiplying the number of records processed. [Apex Developer Guide](#)

NEW QUESTION # 103

A company's support process dictates that any time a case is closed with a status of "Could not fix," an Engineering Review custom object record should be created and populated with information from the case, the contact, and any of the products associated with the case.

What is the correct way to automate this using an Apex trigger?

- A. A before upset trigger on Case that creates the Engineering Review record and Inserts it
- B. An after upset trigger on Case that creates the Engineering Review record and inserts It .
- C. A before update trigger on Case that creates the Engineering Review record and Inserts It
- D. An after update trigger on Case that creates the Engineering Review record and inserts it

Answer: D

Explanation:

In Salesforce, triggers can be defined to execute before or after a DML operation. An "after" trigger is used when you want to use the records that have been changed and rely on their committed values. In this scenario, you would use an after update trigger because you need to create a new record (Engineering Review) after the case has been updated with a status of "Could not fix". This cannot be done in a "before" trigger because the changes have not yet been committed to the database.

Therefore, the correct answer is A, which specifies an after update trigger on the Case object to create and insert the Engineering Review record.

NEW QUESTION # 104

Universal Containers allows customers to log into a Salesforce Community and update their orders via a custom Visualforce page. Universal Containers' sales representatives can edit the orders on the same Visualforce page.

What should a developer use in an Apex test class to test that record sharing is enforced on the Visualforce page?

- A. use System. profiles() to test as an administrator and a community user.
- B. use System. profiles1h=() to test as a sales rep and a community user.
- C. use System. runsAs () to test as an administrator and a community user.
- D. use System. profiles=() to test as a sales rep and a community user.

Answer: C

Explanation:

The System.runAs() method is used in test classes to enforce record sharing. This method allows you to write test methods that change user contexts to ensure that the proper record sharing is enforced. Reference:

NEW QUESTION # 105

A developer created an Opportunity trigger that updates the account rating when an associated opportunity is considered high value. Current criteria for an opportunity to be considered high value is an amount greater than or equal to \$1,000,000. However, this criteria value can change over time.

There is a new requirement to also display high value opportunities in a Lightning web component.

Which two actions should the developer take to meet these business requirements, and also prevent the business logic that obtains the high value opportunities from being repeated in more than one place?

Choose 2 answers

- A. Create a helper class that fetches the high value opportunities,
- B. Call the trigger from the Lightning web component.
- C. Leave the business logic code inside the trigger for efficiency.
- D. Use custom metadata to hold the high value amount.

Answer: A,D

Explanation:

Creating a helper class allows the logic to be centralized and reused in both the trigger and the Lightning Web Component (LWC), avoiding repetition. Using custom metadata to store the criteria value allows easy updates without code changes and can be referenced from both the helper class and the trigger.

[Custom Metadata Types Guide](#)

NEW QUESTION # 106

In an organization that has multi-currency enabled, a developer is tasked with building a Lighting component that displays the top ten Opportunities most recently accessed by the logged in user. The developer must ensure the Amount and LastModifiedDate field values are displayed according to the user's locale.

What is the most effective approach to ensure values displayed respect the user's locale settings?

- A. Use a wrapper class to format the values retrieved via SOQL.
- B. Use the FORMAT () function in the SOQL query.
- C. Use the FOR VIEW clause in the SOQL query.
- D. Use REGEX expressions to format the values retrieved via SOQL.

Answer: B

Explanation:

In a multi-currency Salesforce organization, displaying currency amounts according to the user's locale is crucial for ensuring data clarity and relevance. To achieve this, developers can leverage Salesforce's built-in capabilities to format field values directly within

SOQL queries. The FORMAT() function is particularly useful as it formats currency fields according to the organization's locale settings. By using this function in a SOQL query, developers can ensure that the Amount and LastModifiedDate fields are displayed correctly. This method is more effective and efficient than post-processing the values in Apex, which would be required if using wrapper classes or REGEX expressions. Additionally, using the FOR VIEW clause in a SOQL query will mark records as recently viewed, which does not format the fields as per the user's locale.

SOQL FORMAT Function

Working with Multi-Currency

NEW QUESTION # 107

.....

Do you want to get the Plat-Dev-301 learning materials as fast as possible? If you do, we can do this for you. We will give you Plat-Dev-301 exam dumps downloading link and password within ten minutes after buying. If you don't receive the Plat-Dev-301 learning materials, please contact us, and we will solve it for you. Besides, the Plat-Dev-301 Learning Materials is updated according to the exam centre, if we have the updated version, our system will send the latest one to you for one year for free.
