Salesforce Media Cloud Accredited Professional (AP) Exam Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which two objects in the Media Cloud data model hold specific Ad Sales information within the Advertising Sales Management (ASM) application?
Choose 2 answers

- A. Ad Creative Size Type
- B. Quote
- C. Contract Line Item
- D. Media Plan Placement

Answer: C,D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Media Plan Placement holds detailed ad sales planning data, and Contract Line Item captures sales contract specifics in ASM. Quote is a standard sales object, but Media Cloud extends sales data primarily into placement and contract line item objects. Ad Creative Size Type relates to creative attributes but is less focused on sales information.

Media Cloud ASM Data Model
https://help.salesforce.com/s/articleView?id=sf.media_cloud_asm_objects.htm&type=5

NEW QUESTION # 41
Which two solutions should a Consultant recommend to a client who wants to integrate with an ad server other than Google Ad Manager (GAM) to create an ad campaign?
Choose 2 answers

- A. Use the Out of the Box Ad Server Integration.
- B. Use the Out of the Box Marketing Cloud Intelligence connector.
- C. Create a custom solution using Apex code.
- D. Create a custom integration procedure to integrate with the ad server.

Answer: C,D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Media Cloud provides out-of-the-box integration only with Google Ad Manager. For other ad servers, a custom integration is required either via a custom Integration Procedure or Apex code to handle API interactions and data flows. The Marketing Cloud Intelligence connector focuses on analytics, not ad server integration.

NEW QUESTION # 42
A System Administrator of an advertising publishing company that uses Advertising Sales Management (ASM) is going through the migration from source org to target org.
During the migration, the System Administrator runs into an error related to permissions and licenses on the target org.
Which two reasons could have caused the error?
Choose 2 answers

- A. The source org does not have the required platform license definitions and add-on licenses.
- B. The target org does not have the necessary integration procedures and Data Raptors.
- C. The target org does not have the required platform license definitions and add-on licenses.
- D. The System Administrator user profile on the target org does not have the required permission set licenses or add-on licenses.

Answer: C,D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:

Permission and license errors in migration typically arise because the target org lacks the required platform license definitions or add-on licenses, or because the admin user profile does not have the necessary permission set licenses assigned. The source org licenses don't impact target org migration errors, and missing integration procedures/Data Raptors usually cause functional issues but not license errors.

Media Cloud ASM Migration Guide
Salesforce License and Permission Management
https://help.salesforce.com/s/articleView?id=sf.media_cloud_migration_troubleshooting.htm&type=5

NEW QUESTION # 43
A customer needs to implement an automated Continuous Integration and Continuous Development (CI/CD) workflow where developers will work on their own Developer orgs to configure different OmniScripts. The developers then need to migrate the changes they have done to a sandbox that will be used for testing before promoting changes to Production.
Which tool should developers use to automate the migration of OmniStudio DataPacks and Salesforce metadata within the Media Cloud orgs?

- A. Data Loader
- B. IDX Workbench
- C. IDX Build Tool
- D. Backup and Restore Automation

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
IDX Build Tool is the recommended tool for automating migration and deployment of OmniStudio DataPacks and metadata between Salesforce orgs, supporting CI/CD workflows. IDX Workbench is more manual, and Backup and Restore Automation and Data Loader do not support OmniStudio DataPacks.
Reference:
Salesforce IDX Build Tool Documentation
Media Cloud Deployment Automation
https://help.salesforce.com/s/articleView?id=sf.media_cloud_idx_build_tool.htm&type=5

NEW QUESTION # 44
A publisher wants to empower its sales team by embedding analytic dashboards that show the actual digital delivery performance on the Salesforce account page for advertisers and agencies. The dashboard will need to be customized to reflect nuances of the publisher's business.
What should a Consultant configure or implement to solve for this use case?

- A. Configure the Ad Delivery Connector for CRM Analytics and set up an embedded CRM dashboard.
- B. Clone one of the flex cards included in ASM and customize the parameters to display a Marketing Cloud Intelligence dashboard.
- C. Integrate digital delivery sources to Big Query or Snowflake, connect Tableau to the data warehouse, and then set up an embedded Tableau dashboard on the account page.
- D. Use integration procedures to build a custom connection to the ad server to bring delivery data into the Ad Delivery object and set up a report chart on the account page.

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The Ad Delivery Connector for CRM Analytics is a standard Salesforce solution to display digital delivery metrics directly inside Salesforce, with embedded dashboards tailored to the publisher's business. This approach leverages native Salesforce Analytics, enabling customization and tight integration with account data. Using external data warehouses like Big Query or Tableau is more complex and less integrated.
