

# 1Z0-1072-25퍼펙트덤프문제, 1Z0-1072-25유효한최신덤프자료

그리고 Itexamdump 1Z0-1072-25 시험 문제집의 전체 버전을 클라우드 저장소에서 다운로드할 수 있습니다:  
<https://drive.google.com/open?id=15C3vqB2PzUirGALw04KKZDXcscC9k47s>

Itexamdump 전문가들은 Oracle 1Z0-1072-25 인증 시험만을 위한 특별 학습 가이드를 만들었습니다. Oracle 1Z0-1072-25 인증 시험을 응시하려면 30분이란 시간만 투자하여 특별 학습 가이드로 빨리 관련 지식을 장악하고, 또 다시 복습하고 안전하게 Oracle 1Z0-1072-25 인증 시험을 패스할 수 있습니다. 자격증 취득 많은 시간과 돈을 투자한 분들보다 더 가볍게 이루어졌습니다.

## Oracle 1Z0-1072-25 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> <li>• <b>Compute:</b> This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.</li> </ul>

주제 2	<ul style="list-style-type: none"> <li>Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block</li> <li>File</li> <li>Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.</li> </ul>
주제 3	<ul style="list-style-type: none"> <li>Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN</li> <li>FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.</li> </ul>
주제 4	<ul style="list-style-type: none"> <li>Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources</li> </ul>

## 1Z0-1072-25유효한 최신덤프자료 & 1Z0-1072-25시험덤프

Itexamdump의 Oracle 1Z0-1072-25덤프는 Oracle 1Z0-1072-25시험문제변경에 따라 주기적으로 업데이트를 진행하여 덤프가 항상 가장 최신버전이도록 업데이트를 진행하고 있습니다.구매했던 Oracle 1Z0-1072-25덤프가 업데이트되면 저희측에서 자동으로 구매시 사용한 메일주소에 업데이트된 최신버전을 발송해드리는데 해당 덤프의 구매시간이 1년미만인 분들은 업데이트서비스를 받을수 있습니다.

## 최신 Oracle Cloud Solutions Infrastructure 1Z0-1072-25 무료샘플문제 (Q29-Q34):

### 질문 # 29

Which image option allows you to create identical instances with minimal effort?

- A. Use Oracle-provided images
- B. Bring your own image
- C. Select an image from the OCI Marketplace
- D. Create a custom image

정답: D

### 설명:

When you need to create identical instances with minimal effort, creating a custom image is the best option.

Custom Images: A custom image captures the exact configuration of an instance, including the OS, software, configurations, and data. By using a custom image, you can easily replicate the same setup across multiple instances, ensuring consistency and reducing the need for manual configuration each time.

Other Options:

Bring Your Own Image: This allows you to import your custom OS image into OCI, but it's more suited for cases where you are migrating from another environment.

Select an Image from the OCI Marketplace: This provides pre-configured images from Oracle or third parties, but they may require additional setup to match your specific requirements.

Use Oracle-Provided Images: These are basic images provided by Oracle, which may not include the specific customizations you need.

Relevant OCI Documentation:

Custom Images Overview

This resource explains how to create and use custom images for quickly deploying identical instances.

### 질문 # 30

Which TWO statements about the Oracle Cloud Infrastructure (OCI) File Storage Service are accurate?

- A. Customers can encrypt data in their file system using their own Vault encryption key.
- B. File systems use Oracle-managed keys by default.
- C. Communication with file systems in a mount target is encrypted via HTTPS.
- D. Customers can encrypt the communication to a mount target via export options.

정답: A,B

설명:

Oracle Cloud Infrastructure (OCI) File Storage Service offers robust encryption capabilities to ensure data security.

B. Customer-Managed Encryption: Customers can choose to encrypt their data using their own keys stored in the OCI Vault service. This gives customers control over their encryption keys and enhances data security.

D. Oracle-Managed Encryption: By default, all data stored in OCI File Storage is encrypted using Oracle-managed keys. This ensures that data is encrypted at rest without requiring any action from the customer.

Incorrect Statements:

A. Communication is not encrypted via HTTPS when accessing file systems; instead, encryption in transit is typically managed via NFS over TLS.

C. Encryption of communication to a mount target is handled via network configurations, not through export options.

Reference:

Oracle Cloud Infrastructure Documentation: File Storage Encryption

### 질문 # 31

Which is NOT a valid action within the Oracle Cloud Infrastructure (OCI) Block Volume service?

- A. Cloning an existing volume to a new, larger volume.
- B. Attaching a block volume to an instance in a different availability domain.
- C. Restoring from a volume backup to a larger volume.
- D. Expanding an existing volume in place with offline resizing.

정답: B

설명:

In Oracle Cloud Infrastructure (OCI), block volumes are designed to be highly flexible and can be used in various ways:

A. Restoring from a volume backup to a larger volume: This is supported and allows for resizing during the restoration process.

B. Cloning an existing volume to a new, larger volume: You can clone a block volume and specify a larger size for the new volume.

C. Expanding an existing volume in place with offline resizing: OCI allows you to increase the size of an existing block volume without needing to take it offline.

Option D is NOT valid because block volumes can only be attached to compute instances within the same availability domain.

Cross-availability domain attachment of block volumes is not supported directly.

Reference:

Oracle Cloud Infrastructure Documentation: Block Volume Overview

### 질문 # 32

You want to protect your VM instance from low-level threats, such as rootkits and bootkits. What should you do?

- A. Create a shielded instance.
- B. Create a burstable instance.
- C. Use in-transit encryption.
- D. Use Vulnerability Scanning Service.

정답: A

설명:

To protect your VM instance from low-level threats, such as rootkits and bootkits, you should create a shielded instance in Oracle Cloud Infrastructure (OCI). Shielded instances are designed to provide enhanced security features, including:

Secure Boot: Ensures that the instance boots only with trusted software.

Measured Boot: Records boot metrics, allowing verification that the instance has not been tampered with.

Trusted Platform Module (TPM): Provides additional security through cryptographic functions.

These features help protect against low-level threats that could compromise the integrity of the instance at boot time.

Reference:

Oracle Cloud Infrastructure Documentation: Shielded Instances

### 질문 # 33

Which statement is TRUE about delegating an existing domain to the Oracle Cloud Infrastructure (OCI) DNS service?

- A. Domains can be self-delegated to OCI DNS from its own service portal.
- B. Domains can be delegated to OCI DNS via FastConnect partners.
- C. Domains can be delegated to OCI DNS from the Domain Registrar's self-service portal.
- D. All domains can be retrieved to OCI DNS via DYN.

정답: C

설명:

To delegate a domain to the Oracle Cloud Infrastructure (OCI) DNS service, the domain needs to be pointed to OCI's DNS servers. This can be done through the Domain Registrar's self-service portal, where you update the name servers for your domain to OCI's DNS servers.

Process: You typically log into the domain registrar where your domain is registered and replace the existing name servers with the name servers provided by OCI DNS. Once this is done, DNS queries for your domain will be directed to OCI DNS.
