2025 Latest Exam4Docs HPE6-A78 PDF Dumps and HPE6-A78 Exam Engine Free Share: https://drive.google.com/open?id=1b8n-teOD8QW9X3sd1jI_3vb2R5ko_z_6

Our HPE6-A78 exam questions own a lot of advantages that you can't imagine. First of all, all content of our HPE6-A78 study guide is accessible and easy to remember, so no need to spend a colossal time to practice on it. Second, our HPE6-A78 training quiz is efficient, so you do not need to disassociate yourself from daily schedule. Just practice with our HPE6-A78 learning materials on a regular basis and everything will be fine.

Even we have engaged in this area over ten years, professional experts never blunder in their handling of the HPE6-A78 exam torrents. By compiling our HPE6-A78 prepare torrents with meticulous attitude, the accuracy and proficiency of them is nearly perfect. As the leading elites in this area, our HPE6-A78 prepare torrents are in concord with syllabus of the exam. They are professional backup to this fraught exam. So by using our HPE6-A78 Exam torrents made by excellent experts, the learning process can be speeded up to one week. They have taken the different situation of customers into consideration and designed practical HPE6-A78 test braindumps for helping customers save time. As elites in this area they are far more proficient than normal practice materials' editors, you can trust them totally.

Vce HPE6-A78 Free | Reliable HPE6-A78 Study Materials

For candidates who are going to choose the HPE6-A78 practice materials, it's maybe difficult for them to choose the exam dumps

they need. If you choose us, HPE6-A78 learning materials of us will help you a lot. With skilled experts to verify HPE6-A78 questions and answers, the quality and accuracy can be ensured. In addition, we provide you with free demo to have a try before purchasing, so that we can have a try before purchasing. HPE6-A78 Learning Materials also have high pass rate, and we can ensure you to pass the exam successfully.

HP Aruba Certified Network Security Associate Exam Sample Questions (Q49-Q54):

NEW QUESTION # 49

A company has Aruba Mobility Controllers (MCs), Aruba campus APs, and ArubaOS-Switches. The company plans to use ClearPass Policy Manager (CPPM) to classify endpoints by type. This company is using only CPPM and no other ClearPass solutions.

The ClearPass admins tell you that they want to use HTTP User-Agent strings to help classify endpoints.

What should you do as a part of configuring the ArubaOS-Switches to support this requirement?

- **A. Configure CPPM as the sFlow collector, and make sure that sFlow is enabled on edge ports.**
- B. Connect the switches to CPPM's span ports, and set up mirroring of HTTP traffic on the switches.
- C. Create remote mirrors that collect traffic on edge ports, and mirror it to CPPM's IP address.
- D. Create a device fingerprinting policy that includes HTTP, and apply the policy to edge ports.

Answer: A

Explanation:

ArubaOS-Switches can use sFlow technology to sample network traffic and send the samples to a collector, such as ClearPass Policy Manager (CPPM), for analysis. sFlow can be configured to capture various types of traffic, including HTTP, which typically contains User-Agent strings that can be used for device fingerprinting and classification.

To support the requirement for using HTTP User-Agent strings to classify endpoints, the switches would need to be configured to send sFlow samples containing HTTP traffic to CPPM. CPPM would then analyze these samples and use the User-Agent strings to classify the devices.

Therefore, the correct action to configure ArubaOS-Switches would involve:

Configuring CPPM as the sFlow collector on the switches.

Enabling sFlow on the edge ports that connect to endpoints.

This approach allows the network traffic to be analyzed by CPPM without requiring any additional mirroring or redirection of traffic, which would be resource-intensive and potentially disruptive to network performance.

NEW QUESTION # 50

Which scenario requires the Aruba Mobility Controller to use a Server Certificate?

- A. Synchronize its clock with an NTP server that requires authentication.
- B. Obtain downloadable user roles (DURs) from ClearPass.
- C. Use RADIUS for enforcing 802.1X authentication to ClearPass.
- **D. Use RadSec for enforcing 802.1X authentication to ClearPass.**

Answer: D

Explanation:

A Server Certificate is required by Aruba Mobility Controller when using RadSec to secure RADIUS communication. RadSec provides a secure transport for RADIUS traffic through SSL/TLS which requires the use of a Server Certificate to establish the secure tunnel. In the other scenarios listed, a Server Certificate is not explicitly required for the operations mentioned.

NEW QUESTION # 51

Refer to the exhibit.

A company has an HPE Aruba Networking Instant AP cluster. A Windows 10 client is attempting to connect to a WLAN that enforces WPA3-Enterprise with authentication to HPE Aruba Networking ClearPass Policy Manager (CPPM). CPPM is configured to require EAP-TLS. The client authentication fails. In the record for this client's authentication attempt on CPPM, you see this alert.

What is one thing that you check to resolve this issue?

- A. Whether the client has a third-party 802.1X supplicant, as Windows 10 does not support EAP-TLS
- B. Whether EAP-TLS is enabled in the AAA Profile settings for the WLAN on the IAP cluster
- C. Whether EAP-TLS is enabled in the SSID Profile settings for the WLAN on the IAP cluster
- **D. Whether the client has a valid certificate installed on it to let it support EAP-TLS**

Answer: D

Explanation:

The scenario involves an HPE Aruba Networking Instant AP (IAP) cluster with a WLAN configured for WPA3-Enterprise security, using HPE Aruba Networking ClearPass Policy Manager (CPPM) as the authentication server. CPPM is set to require EAP-TLS for authentication. A Windows 10 client attempts to connect but fails, and the CPPM Access Tracker shows an error: "Client does not support configured EAP methods," with the error code 9015 under the RADIUS protocol category.

EAP-TLS (Extensible Authentication Protocol - Transport Layer Security) is a certificate-based authentication method that requires both the client (supplicant) and the server (CPPM) to present valid certificates during the authentication process. The error message indicates that the client does not support the EAP method configured on CPPM (EAP-TLS), meaning the client is either not configured to use EAP-TLS or lacks the necessary components to perform EAP-TLS authentication.

Option B, "Whether the client has a valid certificate installed on it to let it support EAP-TLS," is correct. EAP-TLS requires the client to have a valid client certificate issued by a trusted Certificate Authority (CA) that CPPM trusts. If the Windows 10 client does not have a client certificate installed, or if the certificate is invalid (e.g., expired, not trusted by CPPM, or missing), the client cannot negotiate EAP-TLS, resulting in the error seen in CPPM. This is a common issue in EAP-TLS deployments, and checking the client's certificate is a critical troubleshooting step.

Option A, "Whether EAP-TLS is enabled in the AAA Profile settings for the WLAN on the IAP cluster," is incorrect because the error indicates that CPPM received the authentication request and rejected it due to the client's inability to support EAP-TLS. This suggests that the IAP cluster is correctly configured to use EAP-TLS (as the request reached CPPM with EAP-TLS as the method). The AAA profile on the IAP cluster is likely already set to use EAP-TLS, or the error would be different (e.g., a connectivity or configuration mismatch issue).

Option C, "Whether EAP-TLS is enabled in the SSID Profile settings for the WLAN on the IAP cluster," is incorrect for a similar reason. The SSID profile on the IAP cluster defines the security settings (e.g., WPA3-Enterprise), and the AAA profile specifies the EAP method. Since the authentication request reached CPPM with EAP-TLS, the IAP cluster is correctly configured to use EAP-TLS.

Option D, "Whether the client has a third-party 802.1X supplicant, as Windows 10 does not support EAP-TLS," is incorrect because Windows 10 natively supports EAP-TLS. The built-in Windows 10 802.1X supplicant (Windows WLAN AutoConfig service) supports EAP-TLS, provided a valid client certificate is installed. A third-party supplicant is not required.

The HPE Aruba Networking ClearPass Policy Manager 6.11 User Guide states:

"EAP-TLS requires both the client and the server to present a valid certificate during the authentication process. If the client does not have a valid certificate installed, or if the certificate is not trusted by ClearPass (e.g., the issuing CA is not in the ClearPass trust list), the authentication will fail with an error such as 'Client does not support configured EAP methods' (Error Code 9015). To resolve this, ensure that the client has a valid certificate installed and that the certificate's issuing CA is trusted by ClearPass." (Page 295, EAP-TLS Troubleshooting Section) Additionally, the HPE Aruba Networking Instant 8.11 User Guide notes:

"For WPA3-Enterprise with EAP-TLS, the client must have a valid client certificate installed to authenticate successfully. If the client lacks a certificate or the certificate is invalid, the authentication will fail, and ClearPass will log an error indicating that the client does not support the configured EAP method." (Page 189, WPA3-Enterprise Configuration Section)

NEW QUESTION # 52

What is a guideline for deploying Aruba ClearPass Device Insight?

- A. Make sure that Aruba devices trust the root CA certificate for the ClearPass Device Insight Analyzer's HTTPS certificate.
- B. Configure remote mirroring on access layer Aruba switches, using Device Insight Analyzer as the destination IP.
- **C. For companies with multiple sites, deploy a pair of Device Insight Collectors at the HQ or the central data center.**
- D. Deploy a Device Insight Collector at every site in the corporate WAN to reduce the impact on WAN links.

Answer: C

Explanation:

For deploying Aruba ClearPass Device Insight effectively, especially in environments with multiple sites, it is recommended to deploy a pair of Device Insight Collectors at the headquarters or the central data center. This deployment strategy helps in centralizing the data collection and analysis, which simplifies management and enhances performance by reducing the data load on the WAN links.

connecting different sites. Centralizing the collectors at a major site or data center allows for better scalability and reliability of the network management system. This configuration also aids in achieving a more consistent and comprehensive monitoring and analysis of the devices across the network, ensuring that the security and management policies are uniformly applied. This recommendation is based on best practices for network architecture design, particularly those discussed in Aruba's deployment guides and network management strategies.

NEW QUESTION # 53

You have been instructed to look in the ArubaOS Security Dashboard's client list. Your goal is to find clients that belong to the company and have connected to devices that might belong to hackers. Which client fits this description?

- A. MAC address d8:50:e6:f3;TO;ab; Client Classification Interfering; AP Classification Rogue
- B. MAC address d8:50:e6:f3;6e;60; Client Classification Interfering; AP Classification Interfering
- C. MAC address d8:50:e6:f3;6d;a4; Client Classification Authorized; AP Classification, interfering
- D. MAC address d8:50:e6 f3;6e;c5; Client Classification Interfering; AP Classification Neighbor

Answer: B

NEW QUESTION # 54

.....

The clients can consult our online customer service before and after they buy our HPE6-A78 useful test guide. We provide considerate customer service to the clients. Before the clients buy our HPE6-A78 cram training materials they can consult our online customer service personnel about the products' version and price and then decide whether to buy them or not. After the clients buy the HPE6-A78 Study Tool they can consult our online customer service about how to use them and the problems which occur during the process of using. We will help you pass the HPE6-A78 exam in the shortest time.

Vce HPE6-A78 Free: <https://www.exam4docs.com/HPE6-A78-study-questions.html>

HP HPE6-A78 Exam Syllabus Our company provides you with the best products, So our Vce HPE6-A78 Free - Aruba Certified Network Security Associate Exam exam cram will be your best choice, What's more, the experts of our HPE6-A78 sure-pass torrent: Aruba Certified Network Security Associate Exam still explore a higher pass rate so that they never stop working for it, Now, we will provide you with the cost-efficient and time-saving HPE6-A78 updated exam torrent and to help you get your certification.

Introductory accounts include: Arnold, Ken, and James Gosling. From an HPE6-A78 organic stand point, it's still true, Our company provides you with the best products, So our Aruba Certified Network Security Associate Exam exam cram will be your best choice.

Try Approved HP HPE6-A78 Exam Questions To Pass HPE6-A78 Exam

What's more, the experts of our HPE6-A78 sure-pass torrent: Aruba Certified Network Security Associate Exam still explore a higher pass rate so that they never stop working for it, Now, we will provide you with the cost-efficient and time-saving HPE6-A78 updated exam torrent and to help you get your certification.
