

100% Pass 300-540 - Pass-Sure Test Designing and Implementing Cisco Service Provider Cloud Network Infrastructure Price

What's more, part of that BraindumpsPass 300-540 dumps now are free: <https://drive.google.com/open?id=1GeMCPj007UPjTXPJO4F1oCUcBVDzA9oV>

One such trustworthy point about exam preparation material is that it first gains your trust, and then asks you to purchase it. Everyone can get help from BraindumpsPass's free demo of Cisco 300-540 exam questions. Our Designing and Implementing Cisco Service Provider Cloud Network Infrastructure exam questions never remain outdated! Take a look at our Free Cisco 300-540 Exam Questions And Answers to check how perfect they are for your exam preparation. Once you buy it, you will be able to get free updates for Designing and Implementing Cisco Service Provider Cloud Network Infrastructure exam questions for up to 1 year.

Cisco 300-540 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">High Availability: This section of the exam measures the skills of Cloud Infrastructure Architects and covers the design and implementation of redundancy and resiliency mechanisms in virtualized network functions and distributed cloud platforms. It includes data plane redundancy for VNFs, high availability within a single VIM control plane, and resilient compute, vNIC, and top-of-rack switching. The exam requires an understanding of multi-homing, EVLAG configurations, virtual private cloud deployment, and ECMP strategies for NFVI integrations with physical routing protocols such as BGP, OSPF, and IS-IS. Candidates must also recommend suitable high-availability models involving DNS, routing, and load balancing.

Topic 2	<ul style="list-style-type: none"> • Service Assurance and Optimization: This section of the exam measures the skills of Cloud Operations Engineers and covers assurance mechanisms used to maintain performance, stability, and visibility across NFVI environments. It includes network assurance concepts such as MANO frameworks, VNF workload monitoring, VIM control plane KPIs, and streaming telemetry with gRPC and gNMI. Candidates must understand cloud infrastructure performance monitoring tools, including SR-PM, NetFlow, IPFIX, syslog, SNMP traps, RMON, cloud agents, and automated fault management systems. The domain also touches on diagnosing NFVI-related errors and optimizing VNFs using techniques such as SR-IOV and software-accelerated virtual switching technologies like DPDK and VPP.
Topic 3	<ul style="list-style-type: none"> • Virtualized Architecture: This section of the exam measures the skills of Cloud Network Engineers and covers the foundational concepts of virtualized infrastructures used in modern service provider and cloud environments. Candidates are expected to understand constraints in IaaS designs, determine appropriate cloud service models, and demonstrate awareness of container orchestration compared to traditional virtual machines. The exam also evaluates the ability to implement key virtualization functions such as NFV, VNF, NSO, and virtualized Cisco platforms. Learners must be able to deploy NFV with automation tools, manage VNF onboarding, work with NSO-driven orchestration, and use protocols like NETCONF, RESTCONF, REST APIs, and gNMI within automated cloud ecosystems. A general understanding of supporting platforms such as OpenStack also forms part of the required knowledge in this domain.
Topic 4	<ul style="list-style-type: none"> • Cloud Interconnect: This section of the exam measures the skills of Service Provider Network Engineers and covers how large networks interconnect with cloud platforms and carrier-neutral facilities. Candidates are expected to understand various connectivity options to cloud providers, customer sites, and other neutral facilities, as well as evaluate WAN connectivity models such as direct connect, MPLS or segment routing, and IPsec VPN links. The domain also includes the ability to troubleshoot advanced data center interconnect solutions, including EVPN VXLAN, EVPN over SR • MPLS, ACI-based connectivity, and pseudowire architectures supporting cloud-to-cloud and cloud-to-edge communication.
Topic 5	<ul style="list-style-type: none"> • Security: This section of the exam measures the skills of Network Security Engineers and covers the implementation of infrastructure-level protection in cloud and NFVI ecosystems. It includes topics such as ACLs, uRPF, RTBH, router hardening, BGP flowspec, TACACS, and MACSEC. Candidates should understand DoS mitigation methods and apply security practices within NFVI, focusing on API protection, securing the control and management plane, and segmentation strategies in service provider cloud environments. The domain also evaluates basic knowledge of TLS, mTLS, and general cloud security solutions related to DNS protection, zero-day defenses, and malware detection.

300-540 Certification Test Answers | 300-540 Guide Torrent

For years our team has built a top-ranking brand with mighty and main which bears a high reputation both at home and abroad. The sales volume of the 300-540 Study Materials we sell has far exceeded the same industry and favorable rate about our products is approximate to 100%. Why the clients speak highly of our 300-540 study materials? Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products. We provide free trial service before the purchase, the consultation service online after the sale, free update service and the refund service in case the clients fail in the test.

Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure Sample Questions (Q85-Q90):

NEW QUESTION # 85

Which protocol is primarily used for collecting and exporting network traffic information?

- A. RMON
- B. NetFlow
- C. gRPC
- D. SNMP

Answer: B

NEW QUESTION # 86

uRPF is utilized to combat which type of security threat?

- A. Viruses
- B. DDoS attacks
- C. Spoofing attacks
- D. Insider threats

Answer: C

NEW QUESTION # 87

BGP flowspec is primarily used for:

- A. Encrypting data traffic
- B. Distributing traffic flow specifications
- C. Access control
- D. Authentication

Answer: B

NEW QUESTION # 88

The primary purpose of container orchestration tools like Kubernetes is to:

- A. Increase manual intervention in container management
- B. Manage physical server allocations
- C. Decrease the scalability of applications
- D. Manage the lifecycle of containers

Answer: D

NEW QUESTION # 89

An engineer must configure NTP servers in Cisco Enterprise NFVIS. The primary NTP server has an IP address of 192.168.1.1 and the backup NTP server has an IP address of 192.168.2.1. Which two commands must be run to complete the configuration? (Choose two.)

- A. system set-manual-time 192.168.1.1 192.168.2.1
- B. system time ntp preferred_server 192.168.1.1
- C. system time ntp backup_server 192.168.2.1
- D. utils ntp server add 192.168.1.1 primary
- E. utils ntp server add 192.168.2.1 backup

Answer: B,C

Explanation:

In Cisco Enterprise NFVIS, time synchronization is configured using the `system time ntp` command structure.

NFVIS requires a primary and optionally a backup NTP server to maintain accurate system time for the hypervisor and guest VMs.

Correct NFVIS command syntax for NTP configuration:

* `system time ntp preferred_server <IP>` This command configures the preferred (primary) NTP server used for system clock synchronization.

* `system time ntp backup_server <IP>` This command configures the backup NTP server, which the system uses if the primary becomes unreachable.

These two commands match Cisco NFVIS time-configuration behavior described in NFV infrastructure design and implementation guidelines.

Why the Correct Answers Are A and E

Option A: system time ntp preferred_server 192.168.1.1

This properly configures the primary NTP server in NFVIS. The preferred server is always the first choice for time synchronization.

Option E: system time ntp backup_server 192.168.2.1

This correctly configures the backup NTP server. If the preferred server fails, NFVIS automatically falls back to the backup server. Both commands directly match NFVIS's NTP command hierarchy and are the only ones that correctly apply to NFVIS.

Why the Other Options Are Not Correct

Option B uses the command ntp, which is not an NFVIS command.

Option C sets manual time and does not configure NTP servers.

Option D also uses the ntp syntax, which applies to other Cisco platforms but not NFVIS.

NEW QUESTION # 90

.....

Our Cisco 300-540 web-based practice exam software also simulates the Designing and Implementing Cisco Service Provider Cloud Network Infrastructure (300-540) environment. These Cisco 300-540 mock exams are also customizable to change the settings so that you can practice according to your preparation needs. BraindumpsPass web-based 300-540 Practice Exam software is usable only with a good internet connection. You can use this Cisco 300-540 version on any operating system, and this software is accessible through any browser like Opera, Safari, Chrome, Firefox, and IE.
