Salesforce Certified Sharing and Visibility Architect Sample Questions (Q61-Q66):

NEW QUESTION # 61

Universal Containers has a custom object to maintain Job information with a private sharing model. The Delivery group is distributed through the Role Hierarchy based on geography. As the Delivery group often collaborates on Jobs, all users in the Delivery profile required View access to all Job records. In special case, the Delivery user who owns a job must be able to grant a Product Development user access to a Job record. Which two platform features can be used to support these requirements?

Choose 2 answers

- A. Owner-based Sharing Rules
- B. "View All" Profile settings
- C. Criteria-based Sharing Rules
- D. Manual Sharing

Answer: B,D

NEW QUESTION # 62

Universal Containers has a large network of partners, who each have seasonal workers that need .. How might the Architect design the solution to federate user setup to the Partners?

Choose 2 answers

- A. Create a permission set giving Read/Write to the User object to partner manager.
- B. Allow external users to self-register.
- C. Grant the Modify Users permission to the partner managers.
- D. Assign delegated external administrators at each partner.

Answer: B,D

Explanation:

Explanation

The architect can design the solution to federate user setup to the partners by assigning delegated external administrators at each partner and allowing external users to self-register. A delegated external administrator is a user who can create and manage users in their own partner account. This way, the partners can have more control over their seasonal workers and reduce the administrative burden on UC. Allowing external users to self-register is another way of simplifying user creation and management for partners, as they can enable their workers to create their own accounts and log in to the community. Granting the Modify Users permission to the partner managers is not a good practice, as it would give them too much power over all users in the org.

Creating a permission set giving Read/Write to the User object to partner manager is also not advisable, as it would expose sensitive user data and allow unauthorized changes.

NEW QUESTION # 63

Which two settings are available in profiles, but not permission sets?

Choose 2 answers.

- A. Record Types
- B. Page Layout Assignments
- C. Tab Settings
- D. Login Hours

Answer: B,D

Explanation:

Explanation

The two settings that are available in profiles, but not permission sets are C and D. Page layout assignments and login hours are profile-specific settings that control the user interface and the time range that users can log in to Salesforce. The other options are either available in both profiles and permission sets, or not related to either.
