

# Palo Alto Networks PCNSE Exam Practice Test To Gain Brilliance Result

## Palo Alto PCNSE Practice Test Bank Questions and Answers Updated summer 2022-2023, A+ level Guide.

Which component of the integrated Palo Alto Networks security solution limits network-attached workstation access to a corporate mainframe?

- a. threat intelligence cloud
- b. advanced endpoint protection
- c. next-generation firewall
- d. tunnel inspection - C

Which Palo Alto Networks product is designed primarily to provide threat context with deeper information about attacks?

- a. Prisma Cloud
- b. WildFire
- c. AutoFocus
- d. Threat Prevention - C

Which Palo Alto Networks product is designed primarily to provide normalization of threat intelligence feeds with the potential for automated response?

- a. MineMeld
- b. WildFire
- c. AutoFocus
- d. Threat Prevention - A

Which Palo Alto Networks product is designed primarily to prevent endpoints from successfully running malware programs?

- a. GlobalProtect
- b. Cortex XDR - Analytics
- c. Cortex XDR
- d. Prisma Cloud - C

The Palo Alto Networks Cortex Data Lake can accept logging data from which two products? (Choose two.)

- a. Cortex XDR
- b. NGFWs
- c. Prisma SaaS
- d. MineMeld
- e. AutoFocus - AB

Which Palo Alto Networks product is a cloud-based storage service designed to hold log information?

- a. Prisma Cloud

P.S. Free 2026 Palo Alto Networks PCNSE dumps are available on Google Drive shared by Pass4guide:

## 100% Pass Quiz 2026 Palo Alto Networks PCNSE Updated Pass4sure Exam Prep

The scoring system of our PCNSE exam torrent absolutely has no problem because it is intelligent and powerful. First of all, our

researchers have made lots of efforts to develop the scoring system. So the scoring system of the PCNSE test answers can stand the test of practicability. Once you have submitted your practice. The scoring system will begin to count your marks of the PCNSE exam guides quickly and correctly. You just need to wait a few seconds before knowing your scores. The scores are calculated by every question of the PCNSE Exam guides you have done. So the final results will display how many questions you have answered correctly and mistakenly. You even can directly know the score of every question, which is convenient for you to know the current learning condition.

Palo Alto Networks Certified Security Engineer (PCNSE) certification is a highly respected industry credential that recognizes professionals who have demonstrated their expertise in implementing and managing Palo Alto Networks security solutions. The PCNSE Exam is designed to validate the skills and knowledge required to design, deploy, configure, maintain, and troubleshoot Palo Alto Networks next-generation firewalls and other security products. The latest version of the exam, PCNSE PAN-OS 10.0, covers the most recent features and functionalities of Palo Alto Networks products and solutions.

The PCNSE certification exam is a vendor-specific certification that is recognized globally. Palo Alto Networks Certified Network Security Engineer Exam certification is a demonstration of an individual's expertise in Palo Alto Networks' security solutions and their ability to implement them effectively. Palo Alto Networks Certified Network Security Engineer Exam certification is highly valued by organizations that use Palo Alto Networks' products and services. Palo Alto Networks Certified Network Security Engineer Exam certification not only enhances an individual's career prospects but also provides organizations with a benchmark for hiring security professionals.

## Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q123-Q128):

### NEW QUESTION # 123

What happens when an A/P firewall cluster synchronizes IPsec tunnel security associations (SAs)?

- A. Phase 2 SAs are synchronized over HA2 links
- B. Phase 1 SAs are synchronized over HA1 links
- C. Phase 1 and Phase 2 SAs are synchronized over HA3 links
- D. Phase 1 and Phase 2 SAs are synchronized over HA2 links

**Answer: A**

Explanation:

Explanation

From the Palo Alto documentation below, "when a VPN is terminated on a Palo Alto firewall HA pair, not all IPSEC related information is synchronized between the firewalls... This is an expected behavior. IKE phase 1 SA information is NOT synchronized between the HA firewalls." And from the second link, "Data link (HA2) is used to sync sessions, forwarding tables, IPSec security associations, and ARP tables between firewalls in the HA pair. Data flow on the HA2 link is always unidirectional (except for the HA2 keep-alive). It flows from the active firewall to the passive firewall."

### NEW QUESTION # 124

Which User-ID mapping method should be used in a high-security environment where all IP address-to-user mappings should always be explicitly known?

- A. LDAP Server Profile configuration
- B. Windows-based User-ID agent
- C. PAN-OS integrated User-ID agent
- D. GlobalProtect

**Answer: D**

Explanation:

Explanation

<https://docs.paloaltonetworks.com/pan-os/10-1/pan-os-admin/user-id/user-id-concepts/user-mapping/globalprote> Because GlobalProtect users must authenticate to gain access to the network, the IP address-to-username mapping is explicitly known. Because GlobalProtect users must authenticate to gain access to the network, the IP address-to-username mapping is explicitly known. This is the best solution in sensitive environments where you must be certain of who a user is in order to allow access to an application or service.

<https://docs.paloaltonetworks.com/pan-os/10-1/pan-os-admin/user-id/user-id-concepts/user-mapping/globalprote>

"On sensitive and high security networks, WMI probing increases the overall attack surface, and administrators are recommended to disable WMI probing and instead rely upon User-ID mappings obtained from more isolated and trusted sources, such as domain controllers. If you are using the User-ID Agent to parse AD security event logs, syslog messages, or the XML API to obtain User-ID mappings, then WMI probing should be disabled. Captive portal can be used as a fallback mechanism to re-authenticate users where security event log data may be stale."

#### NEW QUESTION # 125

Review the information below. A firewall engineer creates a U-NAT rule to allow users in the trust zone access to a server in the same zone by using an external, public NAT IP for that server.

Given the rule below, what change should be made to make sure the NAT works as expected?

□

- A. Change Source NAT zone to Untrust\_L3.
- **B. Add source Translation to translate original source IP to the firewall eth1/2 interface translation.**
- C. Change destination NAT zone to Trust\_L3.
- D. Change destination translation to Dynamic IP (with session distribution) using firewall eth1/2 address.

**Answer: B**

Explanation:

#### NEW QUESTION # 126

Which CLI command is used to determine how much disk space is allocated to logs?

- **A. show system logdfo-quota**
- B. show system info
- C. debug log-receiver show
- D. show logging-status

**Answer: A**

#### NEW QUESTION # 127

Click the Exhibit button

□

An administrator has noticed a large increase in bittorrent activity. The administrator wants to determine where the traffic is going on the company.

What would be the administrator's next step?

- **A. Click on the bittorrent application link to view network activity**
- B. Create a global filter for bittorrent traffic and then view Traffic logs.
- C. Right-Click on the bittorrent link and select Value from the context menu
- D. Create local filter for bittorrent traffic and then view Traffic logs.

**Answer: A**
