With our high-accuracy Category-7A-General-and-Household-Pest-Control test guide, our candidates can grasp the key points, and become sophisticated with the exam content. You only need to spend 20-30 hours practicing with our Pesticide Applicator Category 7A General and Household Pest Control Exam learn tool, passing the exam would be a piece of cake.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q71-Q76):

NEW QUESTION # 71

The two modes of action for the pesticide product TEMPRID are:

- A. Mist or foam
- B. Combined neurotoxin only
- C. Contact and systemic

Answer: C

Explanation:

TEMPRID SC contains two active ingredients: imidacloprid and beta-cyfluthrin. Imidacloprid acts as a systemic insecticide, being absorbed by the pest and affecting its nervous system over time, while beta- cyfluthrin acts as a contact insecticide, killing pests on direct exposure by disrupting nerve function.

The TEMPRID SC label and the General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 6: Pesticide Types) describe these dual modes of action, which make TEMPRID effective against a wide range of pests. Option B (combined neurotoxin only) is partially correct but does not specify the contact and systemic nature. Option C (mist or foam) refers to application methods, not modes of action.

NEW QUESTION # 72

Carpenter ants:

- A. Make transportation tubes from the chewed wood
- B. Feed on the chewed wood from their cavities
- C. Discard the wood from their galleries

Answer: C

Explanation:

Carpenter ants excavate wood to create galleries for nesting but do not feed on it; they discard the wood as sawdust-like frass outside their galleries. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 7: Ants) notes that this frass is a key sign of carpenter ant activity. Option A (feed on the wood) is incorrect, as they feed on insects and sugary substances.

Option B (make transportation tubes) applies to termites, not carpenter ants.

NEW QUESTION # 73

The recertification requirements for a commercial pesticide applicator are:

- A. 16 credits per category and 8 credits core within 5 years
- B. 80 dollars per year
- C. 8 credits core, 24 credits in a category within 3 years

Answer: A

Explanation:

NJDEP requires commercial pesticide applicators to recertify every five years. For Category 7A applicators, this involves earning 8 credits in Core (general pesticide safety and regulations) and 16 credits in each category (e.g., 7A) within that five-year period (N.J.A.C. 7:30-6.4). Option A is incorrect because the category credits are 16, not 24, and the timeframe is five years, not three. Option B (80 dollars per year) is irrelevant to recertification credits, though there may be fees for licensing.

NEW QUESTION # 74

At multi-family residences, the applicator business shall provide a notice to each occupied unit how far in advance?

- A. Prior to treatment
- B. 24 hours
- C. 48 hours

Answer: A

Explanation:

NJDEP regulations (N.J.A.C. 7:30-9.13) require that multi-family residences receive notice prior to treatment, but the exact timeframe is not specified as 24 or 48 hours in the regulation. Best practice, as noted in the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 2:

Notification Requirements), is to provide notice in advance, typically at least 24 hours, but the regulation itself uses the general term "prior." Option B (24 hours) and Option C (48 hours) are specific timeframes not mandated by the regulation.

NEW QUESTION # 75

The most common poisonous spider in New Jersey is the:

- A. Black Widow
- B. Brown Recluse
- C. Orb Weaver

Answer: A

Explanation:

The black widow (*Latrodectus mactans*) is the most common poisonous spider in New Jersey, known for its neurotoxic venom. The General Pest Management: Guide for Commercial Applicators - Category

7A (Chapter 7: Spiders) notes that black widows are more prevalent in the state, often found in dark, sheltered areas. Option A (orb weaver) is not venomous to humans. Option C (brown recluse) is rare in New Jersey, with few confirmed sightings, and is more common in the Midwest.

NEW QUESTION # 76

.....

We often regard learning as a torture. Actually, learning also can become a pleasant process. With the development of technology, learning methods also take place great changes. Take our Category-7A-General-and-Household-Pest-Control practice material for example. All of your study can be completed on your computers because we have developed a kind of software which includes all the knowledge of the Category-7A-General-and-Household-Pest-Control exam. The simulated and interactive learning environment of our test engine will greatly arouse your learning interests. You will never feel boring and humdrum. Your strong motivation will help you learn effectively. If you are tired of memorizing the dull knowledge point, our Category-7A-General-and-Household-Pest-Control Test Engine will assist you find the pleasure of learning. Time is priceless.
