Our products are just suitable for you. Our C\_SEC\_2405 exam training dumps will help you master the real test and prepare well for your exam. If you worry about your exam, our C\_SEC\_2405 Exam Training dumps will guide you and make you well preparing, you will pass exam without any doubt.

### SAP Certified Associate - Security Administrator Sample Questions (Q68-Q73):

#### NEW QUESTION # 68

Following an upgrade of your SAP S/4HANA on-premise system to a higher release, you perform a Modification Comparison using SU25.

What does this comparison do?

- A. It compares the Role Maintenance data from the current release with the data for the previous release and allows you to adjust any custom default values in tables USOBX and USOBT.
- B. It compares your changes to the SAP defaults in USOBX and USOBT with the new SAP defaults in the current release and allows you to make adjustments.
- C. It compares your changes to the SAP defaults in USOBX\_C and USOBT\_C with the new SAP defaults in the current release and allows you to make adjustments.
- D. It compares the Role Maintenance data from the previous release with the data for the current release and writes any new default values in tables USOBX\_C and USOBT\_C.

**Answer: B**

#### NEW QUESTION # 69

Which cybersecurity type does NOT focus on protecting connected devices?

- A. IoT security
- B. Network security
- C. Application security
- D. Cloud security

**Answer: C**

Explanation:

Among the listed cybersecurity types, Application security does not primarily focus on protecting connected devices. Application security concentrates on safeguarding software applications by addressing vulnerabilities in code, ensuring secure development practices, and protecting against threats like SQL injection or cross-site scripting. While applications may run on devices, the focus is on the software layer, not the hardware or connectivity. In contrast, Cloud security protects data, applications, and infrastructure in cloud environments, often including connected devices accessing cloud services. Network security focuses on securing network infrastructure, including devices connected to the network, by implementing firewalls, intrusion detection, and secure protocols. IoT security specifically targets the protection of Internet of Things devices, such as sensors and smart devices, ensuring their connectivity and data integrity. Application security's software-centric approach makes it distinct from the device-focused protection provided by Cloud, Network, and IoT security, aligning with SAP's comprehensive cybersecurity framework for diverse system components.

### NEW QUESTION # 70

What does a status text value of "Old" mean during the maintenance of authorizations for an existing role?

- A. Field values were changed as a result of the merge process.
- B. The field delivered with content was changed but the old value was retained.
- **C. Field values were unchanged and no new authorization was added.**
- D. Field values have not been changed.

**Answer: C**

Explanation:

In SAP role maintenance, a status text value of "Old" indicates that the field values for an authorization in an existing role were unchanged and no new authorizations were added. This status appears during PFCG role maintenance when comparing or updating authorizations, showing that the authorization object or field values have not been modified since the last maintenance and no additional permissions have been included. It reflects a stable state, ensuring that the role's existing permissions remain intact without unintended changes.

Option A is less precise, as it does not address the absence of new authorizations. Option B describes a scenario where changes were made but reverted, which is not "Old." Option C relates to merged authorizations, not the "Old" status. The "Old" status helps administrators confirm that no updates were applied, supporting consistent role management and preventing accidental modifications during maintenance in SAP systems.

### NEW QUESTION # 71

What are some of the rules for SAP-developed roles in SAP S/4HANA Cloud Public Edition? Note: There are 3 correct answers to this question.

- **A. Role maintenance reads applications from a catalog.**
- B. Role maintenance reads applications from role menus.
- **C. Catalogs are assigned to role menus.**
- **D. Authorization defaults define role authorizations.**
- E. Manual role authorizations are supported in custom catalogs.

**Answer: A,C,D**

Explanation:

For SAP-developed roles in SAP S/4HANA Cloud Public Edition, the following rules apply:

- \* Authorization Defaults (A):  
\* Authorizations are pre-defined based on default settings, ensuring standardization.
  - \* Catalog-Driven Maintenance (C):  
\* Role maintenance fetches applications directly from catalogs, streamlining the process.
  - \* Catalog Assignment (D):  
\* Business catalogs are assigned to role menus to define the apps and services users can access.
- SAP Security References:
- \* SAP Help Portal: Role Maintenance in SAP S/4HANA Cloud
  - \* SAP Catalog and Role Management Guidelines

### NEW QUESTION # 72

Which protocol is the industry standard for provisioning identity and access management in hybrid landscapes?

- A. OIDC
- B. SAML
- C. SSL
- **D. SCIM**

**Answer: D**

### NEW QUESTION # 73

.....
