

CloudSec-Pro Exam Pass4sure | CloudSec-Pro Testking Learning Materials

Quality of CloudSec-Pro learning quiz you purchased is of prior importance for consumers. Our CloudSec-Pro practice materials make it easier to prepare exam with a variety of high quality functions. The quality function of our CloudSec-Pro exam questions is observably clear once you download them. We have three kinds of CloudSec-Pro Real Exam moderately priced for your reference: the PDF, Software and APP online. And you can choose any version according to your interests and hobbies.

In addition to the free download of sample questions, we are also confident that candidates who use CloudSec-Pro study materials will pass the exam at one go. CloudSec-Pro study materials are revised and updated according to the latest changes in the syllabus and the latest developments in theory and practice. Regardless of your weak foundation or rich experience, CloudSec-Pro study materials can bring you unexpected results. In the past, our passing rate has remained at 99%-100%. This is the most important reason why most candidates choose CloudSec-Pro Study Materials. Failure to pass the exam will result in a full refund. But as long as you want to continue to take the CloudSec-Pro exam, we will not stop helping you until you win and pass the certification.

Palo Alto Networks CloudSec-Pro Testking Learning Materials - CloudSec-Pro Practice Tests

Don't miss practicing the CloudSec-Pro mock exams and score yourself honestly. You have all the time to try Palo Alto Networks CloudSec-Pro practice exams and then be confident while appearing for the final turn. The desktop software works on Windows and the web-based format works on all operating systems. With PDF questions, you can prepare for the CloudSec-Pro Certification Exam while sitting back at our place.

Palo Alto Networks Cloud Security Professional Sample Questions (Q247-Q252):

NEW QUESTION # 247

Which three incident types will be reflected in the Incident Explorer section of Runtime Defense? (Choose three.)

- A. SQL Injection
- B. Cross-Site Scripting
- C. Port Scanning
- D. Brute Force
- E. Crypto miners

Answer: C,D,E

Explanation:

This section describes the incident types surfaced in Incident Explorer.

Altered binary

Backdoor admin accounts

Backdoor SSH access
Brute force
Crypto miners
Execution flow hijack attempt
Kubernetes attack
Lateral movement
Malware
Port scanning
Reverse shell
Suspicious binary

NEW QUESTION # 248

An S3 bucket within AWS has generated an alert by violating the Prisma Cloud Default policy "AWS S3 buckets are accessible to public". The policy definition follows:

```
config where cloud.type = 'aws' AND api.name='aws-s3api-get-bucket-ac' AND json.rule='((((acl.grants[?(@.grantee=='AllUsers')] size > 0) or policyStatus.isPublic is true) and publicAccessBlockConfiguration does not exist) or ((acl.grants[?(@.grantee=='AllUsers')] size > 0) and publicAccessBlockConfiguration.ignorePublicAcis is false) or (policyStatus.isPublic is true and publicAccessBlockConfiguration.restrictPublicBuckets is false)) and websiteConfiguration does not exist'
```

Why did this alert get generated?

- A. configuration of the S3 bucket
- B. anomalous behaviors
- C. network traffic to the S3 bucket
- D. an event within the cloud account

Answer: A

Explanation:

The alert "AWS S3 buckets are accessible to public" is generated due to the configuration of the S3 bucket, which has been set in a way that allows public access. The policy definition provided checks for various conditions that would make an S3 bucket publicly accessible, such as grants to 'AllUsers', the absence of a 'publicAccessBlockConfiguration', or specific configurations that do not restrict public access. Therefore, the alert is triggered by the configuration settings of the S3 bucket that violate the policy's criteria for public accessibility.

NEW QUESTION # 249

Which two frequency options are available to create a compliance report within the console? (Choose two.)

- A. Weekly
- B. Monthly
- C. Recurring
- D. One-time

Answer: A,D

Explanation:

Within Prisma Cloud, when creating compliance reports, administrators have the flexibility to schedule the generation of these reports based on their specific needs. The available frequency options include "One-time," where a report is generated once at a specified time, and "Weekly," which allows for the recurring generation of reports on a weekly basis. These options provide organizations with the ability to tailor their compliance reporting to their operational requirements, ensuring that they have regular and up-to-date insights into their compliance posture.

NEW QUESTION # 250

An administrator sees that a runtime audit has been generated for a container.

The audit message is:

"/bin/ls launched and is explicitly blocked in the runtime rule. Full command: ls -latr" Which protection in the runtime rule would cause

this audit?

- A. Container
- B. File systems
- **C. Processes**
- D. Networking

Answer: C

Explanation:

The protection in the runtime rule that would cause the audit message indicating "/bin/ls launched and is explicitly blocked in the runtime rule" is related to "Processes". In container security, a runtime rule set to monitor and restrict processes can block specific executables or commands from running within a container. If the rule is triggered, it indicates that a process that is explicitly denied by the policy attempted to execute, which in this case is the 'ls' command.

NEW QUESTION # 251

What is the most reliable and extensive source for documentation on Prisma Cloud APIs?

- A. docs.paloaltonetworks.com
- **B. prisma.pan.dev**
- C. Live Community
- D. Prisma Cloud Administrator's Guide

Answer: B

Explanation:

Prisma Cloud's API documentation and extensive developer resources are primarily hosted on prisma.pan.dev, which is Palo Alto Networks' developer portal. This site offers comprehensive guides, API references, and resources for developers to integrate, automate, and extend the capabilities of Prisma Cloud within their applications and workflows. While docs.paloaltonetworks.com provides official product documentation, and Prisma Cloud Administrator's Guide offers in-depth administrative guidance, prisma.pan.dev is specifically designed to serve as the hub for API documentation and developer resources. The Live Community is another valuable resource for peer support and discussions but is not the primary source for API documentation.
