Test The Open Group OGEA-101 Duration | Valid OGEA-101 Learning Materials

You have ActualCollection The Open Group OGEA-101 certification exam training materials, the same as having a bright future. ActualCollection The Open Group OGEA-101 exam certification training is not only the cornerstone to success, and can help you to play a greater capacity in the IT industry. The training materials covering a wide range, not only to improve your knowledge of the culture, the more you can improve the operation level. If you are still waiting, still hesitating, or you are very depressed how through The Open Group OGEA-101 Certification Exam. Do not worry, the ActualCollection The Open Group OGEA-101 exam certification training materials will help you solve these problems.

The Open Group TOGAF Enterprise Architecture Part 1 Exam Sample Questions (Q56-Q61):

NEW QUESTION # 56
Consider the following statement:
Separate projects may operate their own ADM cycles concurrently, with relationships between the different projects What does it illustrate?

- A. Requirements management
- B. Enterprise Architecture
- C. Iteration
- D. Implementation governance

Answer: C

Explanation:
The statement illustrates iteration and the ADM. Iteration is the technique of repeating a process or a phase with the aim of improving or refining the outcome. Iteration allows for feedback loops and adaptations at any point in the architecture development and transition process. Separate projects may operate their own ADM cycles concurrently, with relationships between the different projects, to address different aspects or levels of the architecture in an iterative manner. Reference: The TOGAF Standard | The Open Group Website, Section 3.1 Introduction to the ADM.

NEW QUESTION # 57
Which one of the following classes of information within the Architecture Repository would typically contain a list of the applications in use within the enterprise?

- A. Reference Library
- B. Architecture Landscape
- C. Architecture Metamodel
- D. Governance Log

Answer: B

Explanation:
The Architecture Landscape is a class of information within the Architecture Repository that shows an architectural view of the building blocks that are in use within the organization today (the Baseline Architecture), as well as those that are planned for the future (the Target Architecture). The Architecture Landscape typically contains a list of the applications in use within the enterprise, along with their relationships and dependencies, as well as other relevant architectural information. The Architecture Landscape helps to identify opportunities for re-use, consolidation, or retirement of existing applications, as well as gaps or overlaps in the current or future architecture.

NEW QUESTION # 58
What is the purpose of the Preliminary Phase?

- A. Defining the Enterprise Strategy.
- B. Describing the target architecture.
- C. Developing an Enterprise Architecture Capability.
- D. Identifying the stakeholders and their requirements.

Answer: C

Explanation:
An Enterprise Architecture Capability is the ability of the organization to perform effective and efficient architecture work, including the definition, governance, and management of its architectures2. The Preliminary Phase involves the following activities1:
*Reviewing the organizational context, scope, and drivers for conducting Enterprise Architecture
*Establishing the Architecture Capability desired by the organization, including the maturity level, roles, responsibilities, processes, and tools
*Defining and establishing the Organizational Model for Enterprise Architecture, which describes how the architecture function is organized and integrated within the enterprise
*Defining and establishing the Architecture Governance framework, which provides the mechanisms for ensuring the quality, consistency, and compliance of the architecture work
*Selecting and implementing the tools that support the Architecture Capability, such as repositories, modeling tools, and communication tools
*Defining the Architecture Principles that will guide and constrain the architecture work, based on the business principles, goals, and drivers of the organization
*Defining the Organization-Specific Architecture Framework, which is an adaptation of the generic TOGAF ADM to suit the specific requirements, standards, and practices of the organization The Preliminary Phase is essential for preparing the organization

for the successful development and implementation of its architectures, as well as for ensuring the alignment of the architecture work with the business strategy and objectives1.

NEW QUESTION # 59
Which statement best describes iteration and the ADM?

- A. The level of detail is defined once and applies to all iterations
- B. The ADM is iterative, over the whole process between phases and within phases
- C. The ADM is iterative within the first cycle and then between phases
- D. The ADM is sequential Iteration is applied within phases

Answer: B

Explanation:
This statement best describes iteration and the ADM. The ADM is iterative over the whole process between phases and within phases because it allows for feedback loops and refinements at any point in the architecture development and transition process. Iteration enables architects to address changing requirements, assumptions, constraints, and environments; to validate and improve architectures; to manage risks and issues; and to ensure stakeholder satisfaction and value realization. Reference: The TOGAF Standard | The Open Group Website, Section 3.1 Introduction to the ADM.

NEW QUESTION # 60
Refer to the table below:

Which ADM Phase does this describe?

- A. Phase A
- B. Phase E
- C. Phase F
- D. Phase G

Answer: D

Explanation:
The table describes the output, outcome, and essential knowledge of an ADM phase that oversees the implementation of changes necessary to reach the adjusted target state. This corresponds to Phase G, also known as Implementation Governance, which ensures that the architecture defined in earlier phases is realized, and it oversees the development and implementation of projects to align with this architecture. The essential knowledge required during this phase includes understanding constraints on the implementation team and adjusting stakeholder priority and preference in response to success, value, effort, and risk of change.
