Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q33-Q38):

NEW QUESTION # 33

Hotspot Question

You have a Microsoft 365 E5 subscription.

You plan to use the Microsoft Purview portal to map human resources (HR) data for use with insider risk management policies.

You need to add a data connector to import the HR data.

What should you do first, and in which format should you import the data? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Step 1: Prepare a CSV file with your HR data

Step 2: Create an app in Microsoft Entra ID

Step 3: Create the HR connector

Step 4: Run the sample script to upload your HR data

Step 5: Monitor the HR connector

(Optional) Step 6: Schedule the script to run automatically

(Optional) Step 7: Upload data by using Power Automate templates

NEW QUESTION # 34

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 tenant and 500 computers that run Windows 11. The computers are onboarded to Microsoft Purview.

You discover that a third-party application named Tailspin_scanner.exe accessed protected sensitive information on multiple computers.

Tailspin_scanner.exe is installed locally on the computers.

You need to block Tailspin_scanner.exe from accessing sensitive documents without preventing the application from accessing other documents.

Solution: From Microsoft Defender for Cloud Apps, you create an app discovery policy.

Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

Cloud discovery policy is used to generate alert when new apps are detected and not for blocking access.

NEW QUESTION # 35

Your company has a Microsoft 365 tenant.

The company performs annual employee assessments. The assessment results are recorded in a document named

AssessmentTemplate.docx that is created by using a Microsoft Word template. Copies of the employee assessments are sent to

employees and their managers.

The assessment copies are stored in mailboxes, Microsoft SharePoint Online sites, and OneDrive folders. A copy of each assessment is also stored in a SharePoint Online folder named Assessments.

You need to create a data loss prevention (DLP) policy that prevents the employee assessments from being emailed to external users. You will use a document fingerprint to identify the assessment documents. The solution must minimize effort.

What should you include in the solution?

- A. Create a sensitive info type that uses Exact Data Match (EDM).
- B. Import 100 sample documents from the Assessments folder to a seed folder.
- C. Create a fingerprint of 100 sample documents in the Assessments folder.
- **D. Create a fingerprint of AssessmentTemplate.docx.**

Answer: D

Explanation:

It is just created document fingerprint using the template, this will be used as "Sensitive Info Type" to discover any employee assessment and apply the control over this file as required.

NEW QUESTION # 36

You have a Microsoft 365 E5 subscription that contains a Microsoft SharePoint Online site named Site1.

Site1 contains the files shown in the following table.

□ In the Microsoft Purview portal, you create a content search named Content1 and configure the search conditions as shown in the following exhibit.

□ Which files will be returned by Content1?

- A. File1.docx and File2.docx only
- B. File1 .docx and File3.docx only
- C. File1 .docx, File2.docx, and File3.docx
- **D. File3.docx only**
- E. File2.docx only

Answer: D

NEW QUESTION # 37

You have a Microsoft 365 E5 subscription.

You create a sensitivity label named Label1 and publish Label1 to all users and groups.

You have the following files in a SharePoint site:

- File1.doc
- File2.docx
- File3.xlsx
- File4.txt

You need to identify which files can have Label1 applied.

Which files should you identify?

- A. File1.doc, File2.docx, and File3.xlsx only
- B. File1.doc, File2.doc, File3.xlsx, and File4.txt
- C. File2.docx only
- **D. File2.docx and File3.xlsx only**

Answer: D

Explanation:

In Microsoft 365, sensitivity labels can be applied to various file types including Word (.docx, .docm), Excel (.xlsx, .xlsm, .xlsb), PowerPoint (.pptx, .ppsx), and PDF documents. These labels can be applied to files stored in OneDrive and SharePoint, as well as attachments in Outlook emails.
